#### ***WARNING – USER RESPONSIBILITY***

**FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.**

- This document and other information from Parker-Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.
- The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalog and in any other materials provided from Parker or its subsidiaries or authorized distributors.
- To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.

# Parker Hannifin

## The global leader in motion and control technologies

### A world class player on a local stage

#### Global Product Design

Parker Hannifin has more than 40 years experience in the design and manufacturing of drives, controls, motors and mechanical products. With dedicated global product development teams, Parker draws on industry-leading technological leadership and experience from engineering teams in Europe, North America and Asia.

#### Local Application Expertise

Parker has local engineering resources committed to adapting and applying our current products and technologies to best fit our customers' needs.

#### Manufacturing to Meet Our Customers' Needs

Parker is committed to meeting the increasing service demands that our customers require to succeed in the global industrial market. Parker's manufacturing teams seek continuous improvement through the implementation of lean manufacturing methods throughout the process. We measure ourselves on meeting our customers' expectations of quality and delivery, not just our own. In order to meet these expectations, Parker operates and continues to invest in our manufacturing facilities in Europe, North America and Asia.

#### Electromechanical Worldwide Manufacturing Locations

##### Europe

Littlehampton, United Kingdom  
Dijon, France  
Offenburg, Germany  
Filderstadt, Germany  
Milan, Italy

##### Asia

Wuxi, China  
Jangan, Korea  
Chennai, India

##### North America

Rohnert Park, California  
Irwin, Pennsylvania  
Charlotte, North Carolina  
New Ulm, Minnesota

Offenburg, Germany

#### Local Manufacturing and Support in Europe

Parker provides sales assistance and local technical support through a network of dedicated sales teams and authorized technical distributors throughout Europe.

For contact information, please refer to the Sales Offices on the back cover of this document or visit [www.parker.com](http://www.parker.com)

# High Force Electro Thrust Cylinder - ETH

## Overview

### Description

The ETH electro cylinder closes the gap between pneumatic and hydraulic actuators; it can act as a suitable alternative to both in many applications and can have the added benefit of increasing the reliability of the production process. Taking the costs for air and oil into consideration, you will find that in most cases an electromechanical system such as the ETH electro cylinder offers the more economical solution. Combined with a wide choice of accessories, the ETH becomes a highly customisable solution, suitable for a variety of applications.

### Typical applications

- **Material handling and feed systems**
  - wood working and plastics industries
  - vertical actuators for loading machine tools
  - in the textile industry for tensioning / gripping textile fabrics
  - in the automotive industry for transporting and feeding components
- **Testing equipment and laboratory applications**
- Valve and flap actuation
- Pressing
- Packaging machinery
- Process automation in the food and beverage industry

### Features

- Unrivaled power density - high forces and small frame sizes
- Cabling can be concealed in the profile
- Accessories with integrated force sensors help to spread and even to control forces precisely
- Optimized for safe handling and simple cleaning
- High service life
- Reduced maintenance costs thanks to lubricating access in the cylinder flange
- Easy replacement due to pneumatic ISO flange norm (DIN ISO 15552:2005-12) conformity
- Integrated anti-rotation device
- Reduced noise emission
- All from one source:  
We offer the complete drive train: Drive controllers, motors and gearboxes to match the Electro Cylinder

### Technical Characteristics - Overview

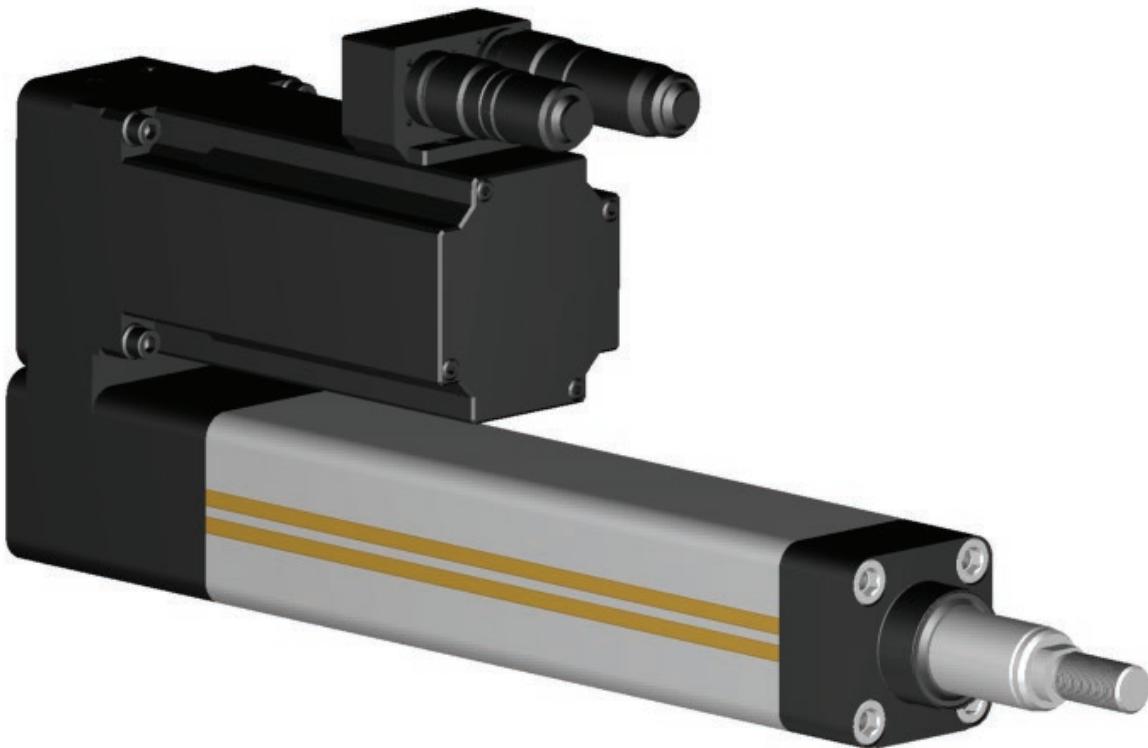

| Type  | ETH Electro Cylinder   |
|---|--|
| Frame sizes   | ETH032 / ETH050 / ETH080 / ETH100 / ETH125   |
| Screw lead  | 5, 10, 16, 20, 32 mm   |
| Stroke  | up to 2000 mm  |
| Traction/thrust force                                   | up to 114 000 N  |
| Speed   | up to 1.7 m/s  |
| Acceleration  | up to 15 m/s <sup>2</sup>  |
| Equivalent dynamic axial force at a lifetime of 2500 km | up to 49 600 N   |
| Efficiency  | up to 90 %   |
| Repeatability   | up to ± 0.03 mm  |
| Protection classes                                      | IP54<br>IP54 with stainless screws<br>IP65   |
| Drive   | Inline: Axial drive or parallel drive with high performance toothed belt   |
| Directives  | 2011/65/EC: Conform to RoHS <br>2014/34/EU Equipment group II<br>Category 2, authorized for gas atmospheres zone 1 and zone 2 |
| Classification  | ETH032, 050:  II 2G c IIC T4  |
|   | ETH080, 100, 125:  II 2G c IIB T4   |
|   | Conformity certificate number:<br>EPS 13 ATEX 2 592 X<br>(X: there are special specification of use, please observe the intended use of the ATEX Cylinder)   |

### We also offer customized solutions:

If your application requires a special version of the ETH cylinder, please contact your local Parker Sales Office.

- Oil splash lubrication
- Customized mountings and rod ends
- Mounting of customer motors
- Preparation of the cylinder for use under aggressive environmental conditions
- Overlong thrust rod
- Polished thrust rod
- Thrust rod hard-chrome plated

| Force constant motor inline <sup>5)</sup>   | [N/Nm] | 565 | 283 | 565 | 283 |
| Force constant motor parallel <sup>5)</sup> | [N/Nm] | 509 | 254 | 509 | 254 |

#### Weight <sup>6)</sup>

|   |        |    |     |    |      |
|---|--------|----|-----|----|------|
| Weight of base unit with zero stroke (incl. piston rod) | [kg]   | 21 | 24  | 56 | 64   |
| Additional weight of inline unit                        | [kg]   |    | 12  |    | 27   |
| Additional weight of parallel unit                      | [kg]   |    | 21  |    | 51   |
| Mass of additional stroke (incl. piston rod)            | [kg/m] |    | 38  |    | 62   |
| Weight of piston rod with zero stroke                   | [kg]   |    | 1.2 |    | 2.9  |
| Weight of piston rod - additional length                | [kg/m] |    | 7.7 |    | 14.4 |

#### Mass moments of inertia

|                                 |                        |      |      |       |       |
|---------------------------------|------------------------|------|------|-------|-------|
| Motor parallel without stroke   | [kgmm <sup>2</sup> ]   | 5860 | 6240 | 17050 | 17990 |
| Motor inline without stroke     | [kgmm <sup>2</sup> ]   | 2240 | 2620 | 12960 | 13400 |
| Parallel/inline motor per meter | [kgmm <sup>2</sup> /m] | 4270 | 4710 | 10070 | 10490 |

#### Accuracy: Bidirectional Repeatability (ISO230-2)

|                |      |       |
|----------------|------|-------|
| Motor inline   | [mm] | ±0.03 |
| Motor parallel | [mm] | ±0.05 |

#### Efficiency

|                |  |     |    |
|----------------|--|-----|----|
| Motor inline   | the efficiency includes all friction torques | [%] | 90 |
| Motor parallel |  | [%] | 81 |

#### Ambient conditions

|                       |      |                           |
|-----------------------|------|---------------------------|
| Operating Temperature | [°C] | -10...+70                 |
| Ambient temperature   | [°C] | -10...+40                 |
| Storage temperature   | [°C] | -20...+40                 |
| Humidity              | [%]  | 0...95 % (non-condensing) |
| Location height range | [m]  | max. 3000                 |

<sup>1)</sup> "Order Code" (page 54), <sup>2)</sup> Intermediate stroke lengths may be interpolated.

<sup>3)</sup> Applies only for motor speed < 100 min<sup>-1</sup>. Transmissible torque depending on the motor speed n Motor parallel see page 15,

<sup>5)</sup> The efficiency factors are included in the force constants, <sup>6)</sup> Weight without rod-end and mounting option..

**Technical Data apply under normal conditions and only for the individual operating and load modes. In the case of compound loads, it is necessary to verify in accordance with normal physical laws and technical standards whether individual ratings should be reduced. In case of doubt please contact Parker.**

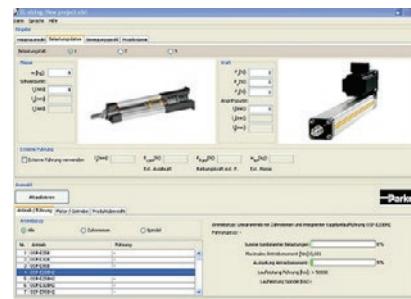

## Step by Step Selection Process

The following steps help you to specify the most suitable electro cylinder for your application.

If your application's requirements exceed a maximum value, please choose a larger electro cylinder and recheck the maximum values. In some cases a smaller electro cylinder can also meet the requirements.

### Automated dimensioning with the help of the "EL Sizing Tool"

Download : [www.parker.com/eme/eth](http://www.parker.com/eme/eth)

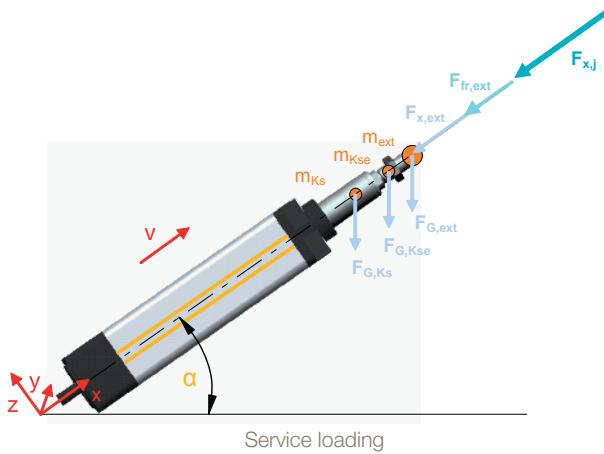

| Step | Application data   | Selection  | With the aid of ...  |
|------|--|--|--|
| 1    | ATEX or non-ATEX environment   | If used in an ATEX environment, check if the ETH corresponds to the ATEX requirements of your application  | "Electro Thrust Cylinder for ATEX Environment" (page 12)       |
| 2    | Accuracy, ambient conditions   | Check the basic conditions for the ETH in your application.  | "Technical Characteristics" (page 8)                           |
| 3    | Required space   | Check the space available in your application and select a motor mounting option: inline or parallel.  | "Dimensions" (page 22)   |
| 4    | Axial forces   | Calculate the axial forces at different points in the application cycle.   | "Calculating Required Axial Force" (page 11)                   |
| 5    | Maximum force required   | Determine the maximum required axial force (traction and thrust force)   | Determination of the maximum required axial force (page 12)    |
|      |  | Select the cylinder using the maximum axial traction/thrust force (please use the characteristics of your desired motor mounting option: inline or parallel).  | "Technical Characteristics" (page 8)                           |
| 6    | Maximum speed  | Select the screw lead for the desired cylinder.  | "Technical Characteristics" (page 8)                           |
| 7    | Maximum Acceleration   | Check if the maximum acceleration is sufficient.   | "Technical Characteristics" (page 8)                           |
| 8    | Select stroke  | Select the desired stroke:<br>Determine required stroke from 'usable stroke and safety travels'.   | "Stroke, Usable Stroke and Safety Travel" (page 20)            |
|      |  | Select the desired stroke from the list of standard strokes or, if the desired stroke is not listed, define the length of the usable stroke in steps of one mm. Caution! Please respect the minimum and the maximum possible stroke. | "Order Code" (page 54)<br>"Technical Characteristics" (page 8) |
| 9    | Permissible thrust force taking the buckling risk into consideration | Check the maximum thrust force depending on the stroke and the mounting variant.<br>Check if your application can also utilize a different mounting variant allowing to attain the maximum thrust force.                             | "Permissible Side Load" (page 18)                              |
| 10   | Service life   | Determine the service life with the aid of an equivalent axial force, the operational environment (application factor) and the service life diagrams.  | "Service Life" (page 13)                                       |
| 11   | Permissible side load  | Determine the lateral forces of your application and compare them to the permissible lateral forces (depending on the stroke).   | Side load (page 18)<br>Diagrams (page 18)                      |
| 12   | Relubricating cycle  | Check if the required relubricating cycle is suitable for your production environment.   | "Relubrication" (page 21)                                      |
| 13   | Motor / gearbox  | Calculate the necessary torque to generate the required force at the ETH.<br>Select a suitable motor.  | "Motor and Gearbox Selection" (page 26)                        |
| 14   | Motor mounting flange  | Select a suitable motor mounting flange.   | "Motor Mounting Options" (page 23)                             |
| 15   | Mounting type  | Select the electro cylinder mounting method.   | "Mounting Methods" (page 27)                                   |
| 16   | Cylinder rods  | Select the cylinder rod end for load mounting.   | "Cylinder Rod Version" (page 33)                               |

# Calculating Required Axial Force

Formulas 1 & 2 below give the mathematical equation for calculating the thrust required to extend or retract the piston rod.

With the aid of the axial forces, it is possible to check if the electro cylinder is able to provide the required forces and if the maximum buckling load is respected. The axial forces are also used as the calculation basis for the service life.

## Formula symbols (Formula 1-2)

|                 |   |
|-----------------|---|
| $F_{x,a,j}$     | = Axial forces during extension in N  |
| $F_{x,e,j}$     | = Axial forces during retraction in N   |
| $F_{x,ext}$     | = External axial force in N   |
| $F_{G,ext}$     | = Weight force caused by an additional mass in N                                      |
| $F_{G,Kse}$     | = Weight force caused by the cylinder rod end in N                                    |
| $F_{G,Ks}$      | = Weight force caused by the cylinder rod in N  |
| $m_{ext}$       | = Additional mass in kg   |
| $m_{Kse}$       | = Mass of the cylinder rod end in kg (see "Cylinder Rod Version" page 33)             |
| $m_{Ks,0}$      | = Mass of the cylinder rod at zero stroke in kg (see table "Technical Data" page 8)   |
| $m_{Ks,stroke}$ | = Mass of the cylinder rod per mm of stroke in kg (see table "Technical Data" page 8) |
| Stroke          | = Selected stroke in m  |
| $a_{K,j}$       | = Acceleration at the cylinder rod in m/s <sup>2</sup>                                |
| $\alpha$        | = Alignment angle in °  |
| $F_{x,max}$     | = Maximum permissible axial force in N  |
| $F_{f,ext}$     | = External friction force in N  |

Index "j" for the individual segments of the application cycle

## Calculation of axial forces

Determine the axial forces occurring during each individual segment of the application cycle.

### Cylinder rod extending:

$$F_{x,a,j} = F_{x,ext} + F_{fr,ext} + (m_{ext} + m_{Kse} + m_{Ks,0} + m_{Ks,stroke} \cdot \text{Stroke}) \cdot (a_{K,j} + \sin\alpha \cdot 9.81 \frac{m}{s^2}) \quad \text{Formula 1}$$

### Cylinder rod retracting:

$$F_{x,e,j} = F_{x,ext} - F_{fr,ext} + (m_{ext} + m_{Kse} + m_{Ks,0} + m_{Ks,stroke} \cdot \text{Stroke}) \cdot (-a_{K,j} + \sin\alpha \cdot 9.81 \frac{m}{s^2}) \quad \text{Formula 2}$$

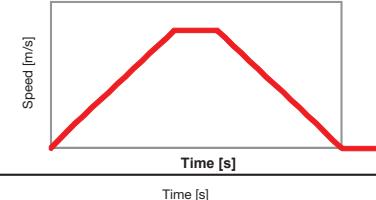

### Sample calculation:

#### Vertical mounting

- ETH050
- Stroke = 500 mm = 0.5 m
- Pitch = 5 mm
- Rod End: External thread
- Trapezoidal velocity course
- Acceleration  $a_k = 4 \text{ m/s}^2$
- $m_{ext} = 150 \text{ kg}$
- $F_{x,ext} = 1000 \text{ N}$
- $m_{Kse} = 0.15 \text{ kg}$
- $m_{Ks,0} = 0.15 \text{ kg}$
- $m_{Ks,stroke} = 1.85 \text{ kg/m}$
- Alignment angle  $\alpha = -90^\circ$
- External friction force = 30 N

Trapezoidal Velocity course

#### Thrust rod moving forth: Mass is moved downwards

Load case: Acceleration

$$F_{x,a,1} = 1000N + 30N + \left(150kg + 0.15kg + 0.15kg + 1.85 \frac{kg}{m} \cdot 0.5m\right) \cdot \left(4 \frac{m}{s^2} + \sin(-90^\circ) \cdot 9.81 \frac{m}{s^2}\right) = 151N$$

Load case: Constant Velocity

$$F_{x,a,2} = 1000N + 30N + \left(150kg + 0.15kg + 0.15kg + 1.85 \frac{kg}{m} \cdot 0.5m\right) \cdot \left(0 \frac{m}{s^2} + \sin(-90^\circ) \cdot 9.81 \frac{m}{s^2}\right) = -454N$$

Load case: Deceleration

$$F_{x,a,3} = 1000N + 30N + \left(150kg + 0.15kg + 0.15kg + 1.85 \frac{kg}{m} \cdot 0.5m\right) \cdot \left(-4 \frac{m}{s^2} + \sin(-90^\circ) \cdot 9.81 \frac{m}{s^2}\right) = -1058N$$

#### Thrust rod moving back: Mass is moved upwards

Load case: Acceleration

$$F_{x,e,4} = 1000N - 30N + \left(150kg + 0.15kg + 0.15kg + 1.85 \frac{kg}{m} \cdot 0.5m\right) \cdot \left(-4 \frac{m}{s^2} + \sin(-90^\circ) \cdot 9.81 \frac{m}{s^2}\right) = -1118N$$

Load case: Constant Velocity

$$F_{x,e,5} = 1000N - 30N + \left(150kg + 0.15kg + 0.15kg + 1.85 \frac{kg}{m} \cdot 0.5m\right) \cdot \left(0 \frac{m}{s^2} + \sin(-90^\circ) \cdot 9.81 \frac{m}{s^2}\right) = -514N$$

Load case: Deceleration

$$F_{x,e,6} = 1000N - 30N + \left(150kg + 0.15kg + 0.15kg + 1.85 \frac{kg}{m} \cdot 0.5m\right) \cdot \left(4 \frac{m}{s^2} + \sin(-90^\circ) \cdot 9.81 \frac{m}{s^2}\right) = 91N$$

## Selection of the Size and Screw Lead

### Required maximum axial force

Determine the maximum axial force (page 11) that the electro cylinder must provide.

### Preselection of the electro cylinder

Using the calculated force required, compare the actual electro cylinder specifications (page 8) to determine which profile size will produce enough force.

Once you have determined a profile size, determine that the unit will physically fit in the space allowed by the application (including parallel or inline motor mounts).

### Required maximum velocity

The maximum velocity of the electro cylinder depends on the stroke.

With the profile size selected, refer to the critical speed information (page 8) to determine which screw lead works best for the application at the needed stroke length.

When the precise stroke is defined, the velocity must again be verified.

### Required maximum acceleration

The maximum acceleration depends on the screw lead and serves as an additional selection criterion for the suitable electro cylinder. It is listed in the "Technical Data" (page 8).

## ETH - Electro Thrust Cylinder for ATEX Environment

Parker Hannifin has extended its well known ETH - High Force Electro Thrust Cylinder for the use in explosive atmospheres (ATEX). The new ETH ATEX offers all advantages of the well known ETH Electro Thrust Cylinder and offers even in explosive atmospheres precise motion, positioning, setting and actuating.

The ETH ATEX range is ATEX certified for device group II, category 2 in explosive gas atmospheres. In conjunction with the ATEX certified EX series servomotors, Parker Hannifin offers a complete drive package for such applications.

### Target Market / Applications

A ATEX environment contains a mixture of air and flammable substances such as gas, vapor or fluids which are potentially explosive under atmospheric conditions. ATEX certificated devices are essential for the use under this conditions.

#### Typical applications:

- Oil & Gas Industry
- Chemical and pharmaceutical industries
- Food processing (distillery)
- Printing & Plastic Industry
- Energy (Generation of Bio gas, gas turbines)
- Automotive industry (Paint finish)
- Waste processing plants

### How to proceed when projecting a ATEX Cylinder

- Project an ETH - Electro Thrust Cylinder by means of this catalogue
- Check by means of the document "ETH ATEX frame conditions for applications" [192-550006] whether the selected ETH - Electro Thrust Cylinder corresponds to all ATEX demands in your application.
- In case the conditions cannot be fulfilled, please choose a larger electro cylinder and recheck the application data (e.g. changed cycle times).
- A application specific release by measuring the self-heating with your application data in our company is possible (see "ETH ATEX frame conditions for applications" [192-550006].

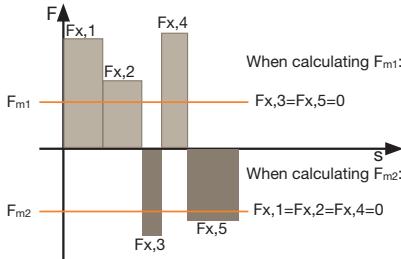

# Service Life

## Nominal service life<sup>1,2</sup>

The nominal service life of the electro cylinder can be determined with the aid of the diagrams page 14.

The forces calculated for each individual segment of the application cycle must be summarized into an equivalent axial force  $F_m$  "Calculating Required Axial Force" (page 11). If axial forces with different signs apply, two equivalent axial forces must be calculated:

- $F_{m1}$  for all positive forces. The negative forces will convert to zero.
- $F_{m2}$  for all negative forces. The positive forces will convert to zero.

## Calculation

$$F_{m1,2} = \sqrt[3]{\frac{1}{s_{total}} (F_{x,1}^3 \cdot s_1 + F_{x,2}^3 \cdot s_2 + F_{x,3}^3 \cdot s_3 + \dots)}$$

Formula 3

With the equivalent axial forces, the nominal service life  $L$  in km can be read off the diagrams on page 14.

With **load on both sides**, the nominal service life is:

$$L = (L_1^{-1.11} + L_2^{-1.11})^{-0.9}$$

Formula 3.1

## Actual service life

The actual service life can only be approximated due to a variety of different effects. The nominal service life  $L$  calculation does, for instance, not take insufficient lubrication, impacts and vibrations or critical side loads into consideration. These effects can however be estimated with the aid of the application factor  $f_w$ .

The actual service life is calculated as follows:

$$L_{fw} = \frac{L}{f_w^3}$$

Formula 4

## Application factor $f_w$

| Movement cycle   | Shocks/vibrations |       |        |       |
|--|-------------------|-------|--------|-------|
|  | none              | light | medium | heavy |
| More than 2.5 screw rotations  | 1.0               | 1.2   | 1.4    | 1.7   |
| 1.0 to 2.5 screw rotations <sup>3)</sup> (short stroke applications) | 1.8               | 2.1   | 2.5    | 3.0   |

<sup>3)</sup>After max. 10 000 movement cycles, a lubrication run must be performed (see lubrication run intervals for short stroke applications)

## Boundary conditions for application factor $f_w$ :

- Externally guided electro cylinders
- Accelerations <10 m/s<sup>2</sup>

If your application factor is <1.5, please contact Parker.

The same applies for detailed calculations or for special boundary conditions.

## Lubrication run lengths for short stroke applications

| Lengths of lubrication runs [mm] | ETH032 |     | ETH050 |     | ETH080 |     | ETH100 |     | ETH125 |      |      |      |      |
|----------------------------------|--------|-----|--------|-----|--------|-----|--------|-----|--------|------|------|------|------|
|                                  | M05    | M10 | M16    | M05 | M10    | M20 | M05    | M10 | M32    | M10  | M20  | M10  | M20  |
|                                  | >45    | >54 | >58    | >40 | >46    | >58 | >47    | >65 | >95    | >102 | >140 | >122 | >210 |

## Abbreviations used (formula 3-4)

- $F_m$  = Equivalent axial force in N  
 $F_{x,j}$  = Resulting axial force in N (see formula 1 & formula 2, page 11)  
 $s_j$  = Travel given a defined force  $F_{x,a,j}$  in mm  
 $s_{total}$  = Total travel in mm  
 $L$  = Nominal service life in km (see "Service Life" diagrams page 14)  
 $L_{fw}$  = Service life respecting the application factor in km  
 $f_w$  = Application factor (see table "Application factor" page 13)

Index "j" for the individual segments of the application cycle

If you need the service life as the number of possible cycles, just divide the service life in kilometers by twice the stroke traveled.  
 i.e. Standstill times are not taken into consideration when determining the equivalent axial force ( $F_m$ ), as  $s_j=0$ . Caution, do always consider the stroke as well as the return stroke.

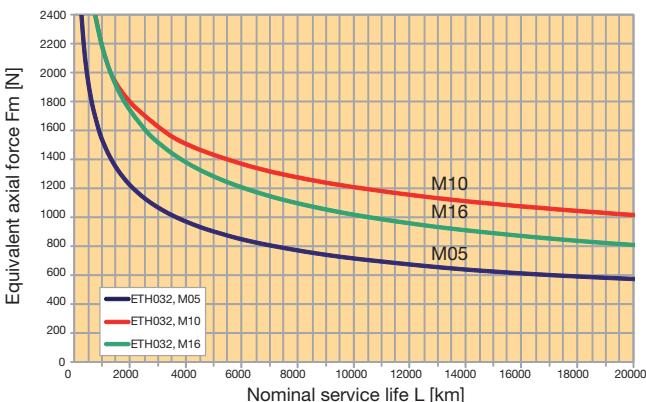

<sup>1</sup>The nominal service life is the service life reached by 90 % of a sufficient number of similar electro cylinders until the first signs of material fatigue occur.

<sup>2</sup>ATEX cylinders feature a reduced service life. Please note the brochure on "intended use" (192-550004).

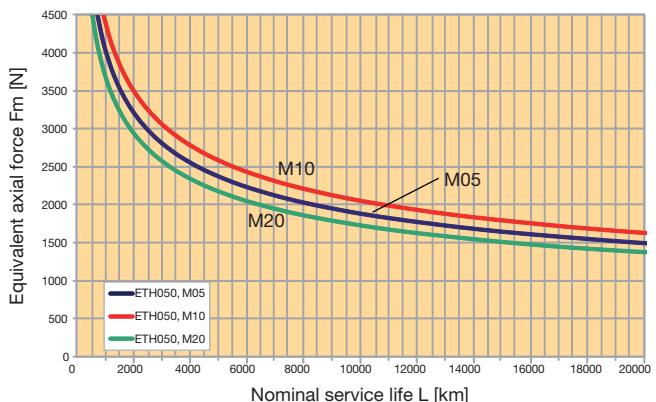

## Diagrams <sup>2</sup>

The given values apply when adhering to the recommended lubrication intervals (see relubrication). The diagrams were established in accordance with DIN ISO 3408-5

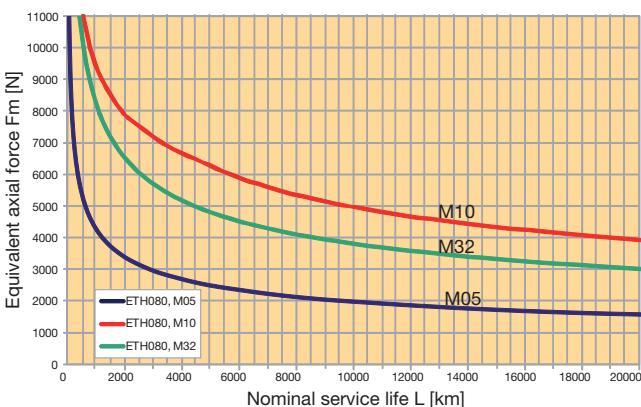

### ETH032

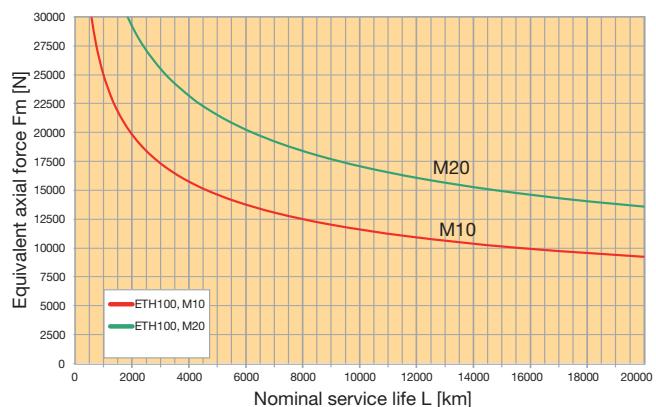

### ETH050

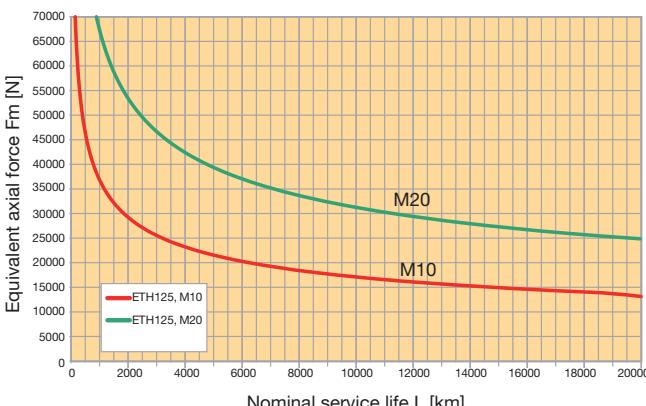

### ETH080

### ETH100

### ETH125

### Prerequisites for nominal service life

- Bearing and screw temperature between 20 °C and 40 °C.
- No impairment of the lubrication, for example by external particles.
- Relubrication in accordance with the specifications.
- The given values for thrust force, speed and acceleration must be adhered to at any rate.
- No approaching the mechanical end stops (external or internal), no other abrupt loads, as the given maximum

force of the cylinder may never be exceeded.

- No external side loads
- Application factor  $f_w = 1$ . In order to calculate the real service life and the corresponding application factor, please refer to chapter "Service Life" see page 13
- No high exploitation of several power features at a time (for example maximum speed or thrust force).
- No regulating oscillation at standstill.

<sup>2</sup>ATEX cylinders feature a reduced service life. Please note the brochure on "intended use" (192-550004).

## Permissible Torque with motor in parallel

The transmittable torque with parallel motor mounting is restricted by the belt transmission depending on the motor speed<sup>1)</sup> or on the screw pitch selected.

### Conversion

The conversion from transmittable torque to the resulting axial tensile force / compressive force to the axial speed can be calculated using formulas 9 and 10.

$$F_{x,j} = M_{motor} \cdot \text{Force constant}$$

Formula 9

#### Abbreviations used (formula 9-10)

$F_{x,j}$  = Axial tensile force / compressive force

$P_{ETH}$  = Lead screw pitch in mm

$V_{ETH}$  = Travel speed in mm / s

$M_{motor}$  = Motor torque in Nm

$n_{motor}$  = Motor speed in min<sup>-1</sup>

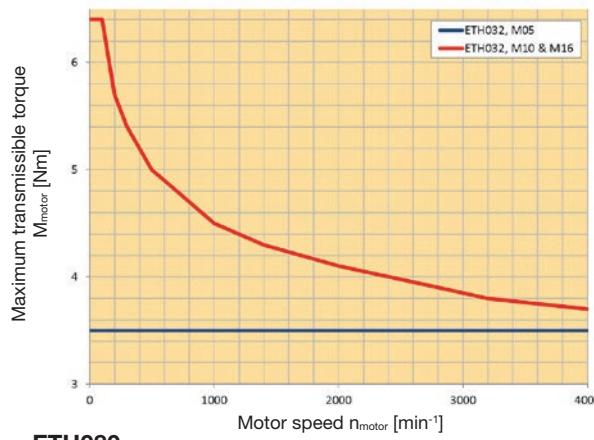

Force constant: Force constant, parallel motor mounting N/Nm (Technical data; page 8, 9)

$$V_{ETH} = \frac{n_{motor}}{60} \cdot P_{ETH}$$

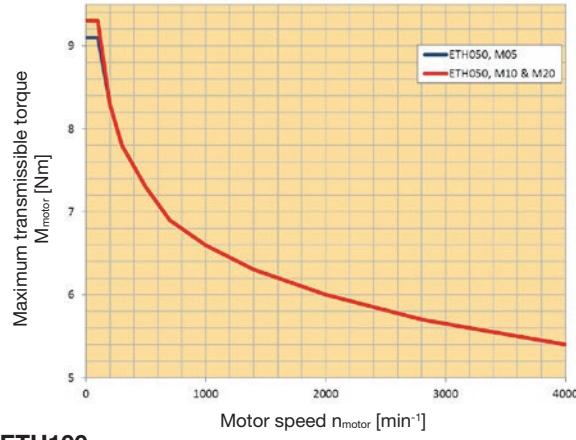

Formula 10

#### ETH050

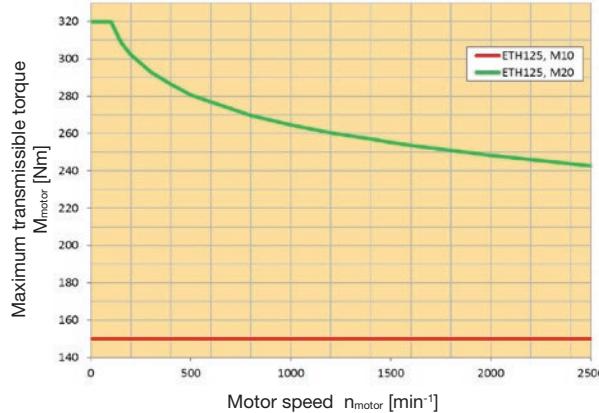

#### ETH080

#### ETH100

#### ETH125

<sup>1)</sup> Please observe the maximum permitted, stroke-dependent speed of the cylinder selected (page 8, 9).

# Permissible Axial Thrust Forces

Limited by the risk of buckling, depending on the stroke and the mounting method; traction forces do not pose any buckling risk.

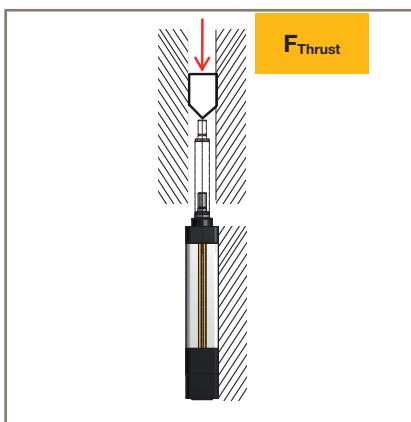

Please check if the maximum axial force ((page 11)) is possible with the planned mounting method and for the desired stroke

## Diagrams

### Case 1

Cylinders fixed with mounting flanges, foot mounting or mounting plates.

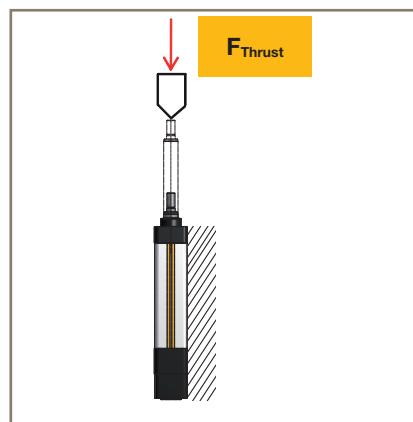

Cylinder always fixed at the front end as well.  
Thrust rod with axial guiding.

### Case 2

Cylinders fixed with mounting flanges, foot mounting or mounting plates.

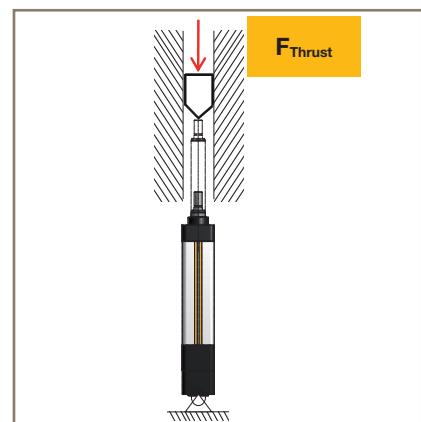

Cylinder always fixed at the front end as well.  
Thrust rod without axial guiding. External force applied axially with respect to cylinder axis.

## Permissible Side Load <sup>1)</sup>

The electro cylinder features a generously dimensioned cylinder rod and screw nut bearing in the form of high-quality plastic sliding elements to absorb the side load. Please note that electro cylinders with a longer stroke permit a higher lateral force at the same extension length. It may therefore be useful to choose a longer stroke.

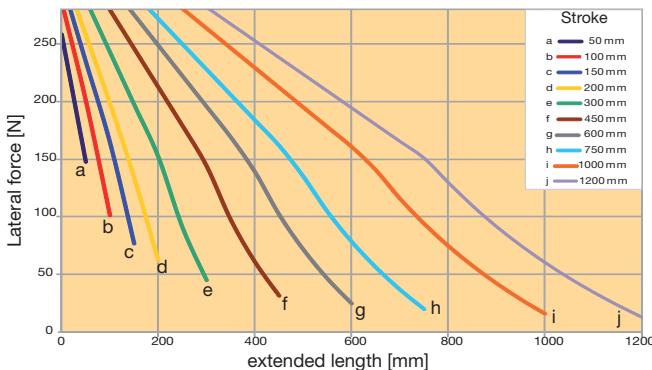

### Permissible lateral forces in vertical mounting position

**ETH032**

**ETH050**

than required for the application in order to increase the permissible lateral force.

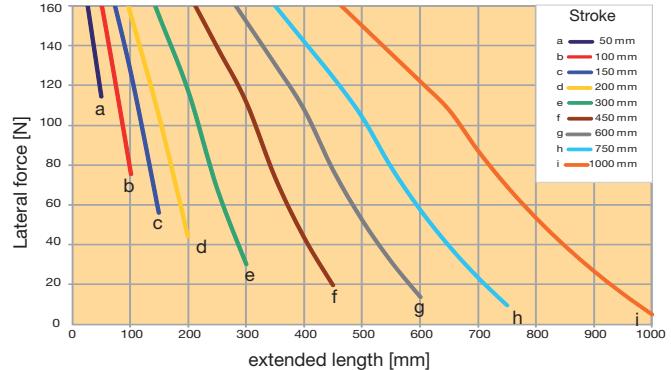

If the permissible lateral forces are exceeded or if the maximum axial force occurs at the same time, the optional outrigger bearing (option R) must be used.

### Permissible lateral forces in horizontal mounting position

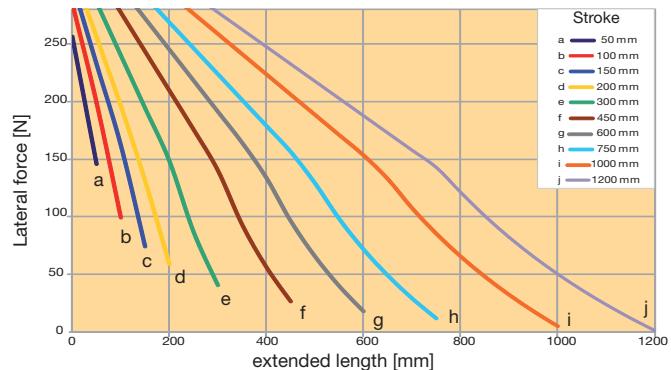

1: Extended length  
2: Force application - at the middle of the cylinder rod thread

**ETH032**

**ETH050**

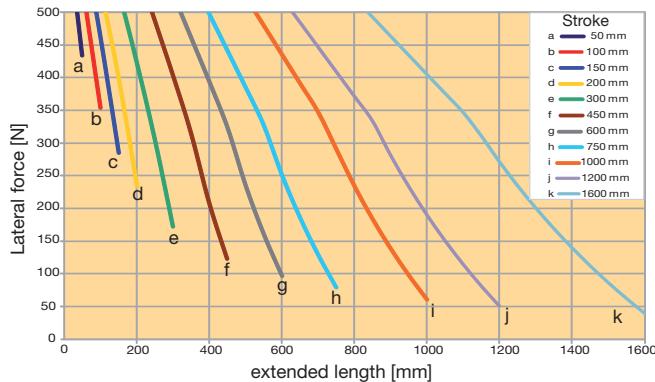

The diagrams apply for an ambient temperature of 20 °C, for all housing orientations and a medium travel speed of 0.5 m/s, (ETH032, ETH050, ETH080) or 0.25 m/s (ETH100, ETH125).

<sup>1)</sup> For ATEX cylinders, side loads are not permitted!

<sup>1)</sup> For ATEX cylinders, side loads are not permitted!

# Stroke, Usable Stroke and Safety Travel

## Calculation

### Stroke:

The stroke to be indicated in the order code is the mechanically maximal possible stroke between the internal end stops.

### Usable stroke:

The usable stroke is the distance which you need to move in your application. It is always shorter than the stroke.

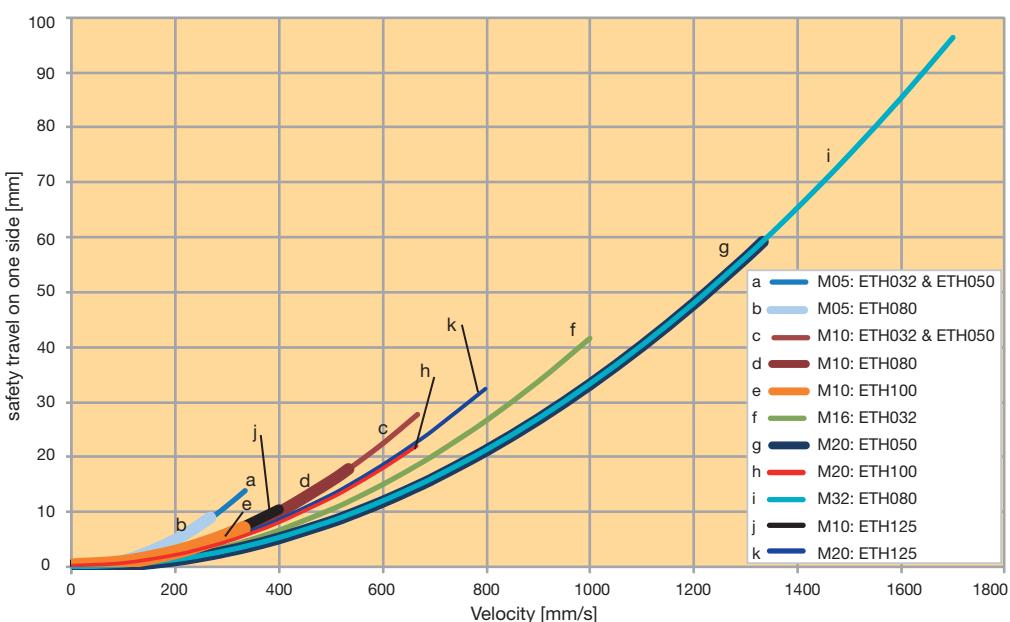

### Safety travel (S1 & S2):

The safety travels are required to slow down the cylinder after it has passed a limit switch, Emergency stop in order to avoid contact with the mechanical limit stops.

Depending on the screw lead and the maximum speed, the following diagram recommends a minimum

safety travel, which is sufficient for most applications according to experience. With demanding applications (great masses and high dynamic), the safety travel has to be calculated and enlarged accordingly (dimensioning on demand).

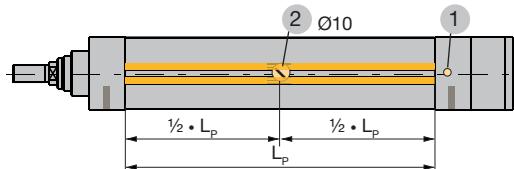

## Diagram

**Information:** The safety travel taken from the diagram applies for one side. I.e. the diagram value must be multiplied by factor 2 in order to get the total safety travel. The diagram is based on the maximum screw acceleration / deceleration

## Relubrication

All frame sizes include a standard Easy lubrication port for lubricating the screw nut (designation "1" in the order code page 54).

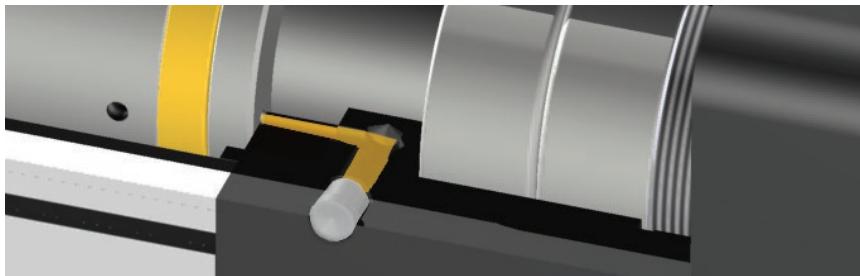

1: Central lubrication (standard)

2: Optional lubrication  
(possible on all 4 sides).

$L_p$ : Length of profile

### Option 1: Central lubrication (standard)

Relubrication is simple using the easy access port. Users simply perform a controlled retract of the cylinder approaching the end stop under slow speed and grease the cylinder. Central relubrication orientation is always envisaged in a 3 o'clock position.

### Option 2...5: Middle lubrication via an opening in the profile

If a space constraint does not allow easy access to the standard lubrication port, other options are available.

Free access to this bore, even after integration of the cylinder into a system, can be ensured by choosing the corresponding profile orientation (see order code page 54). The bore is located in the middle of the aluminum profile.

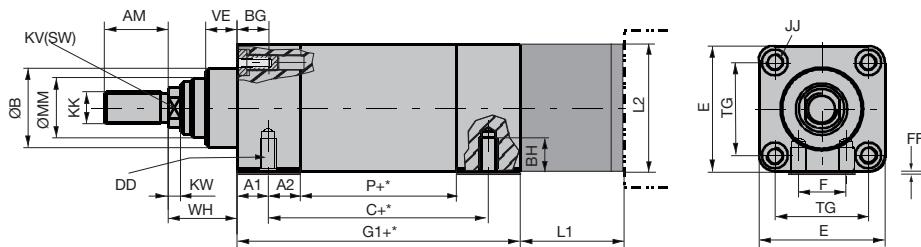

In case of actuators with very short strokes, the position of the lubrication port in the center of the profile may not be possible. In this case, the relubrication position is located centrally in the stroke range. For more information see mounting instructions manual. ([www.parker.com/eme/eth](http://www.parker.com/eme/eth))

Use a suitable pipe for the funnel type lubricating nipple, Type D1a4 DIN3405:Beaked nozzle Item No.: 180-006043 (connection thread 1/8")

## Dimensions

# Motor and Gearbox Selection

## Drive torque calculation

The torques to be produced by the motor result from the acceleration, the load and the friction torque. The drive torques must be calculated for all segments of the application cycle (represented by index "j")

Calculation of the **acceleration torque** with respect to the rotary moments of inertia:

$$M_{B,j} = \left( (J_{i/p,0} + J_{i/p, Stroke} \cdot \text{Stroke}) \cdot \frac{1}{\eta_{ETH}} \cdot \frac{1}{i_G^2 \cdot \eta_G} + J_G + J_M \right) \cdot 10^{-3} \cdot \frac{6.28 \cdot a_{K,j}}{P_h}$$

only with gearbox

Formula 5

The acceleration forces due to the translatory moved masses are taken into consideration in the calculation of the axial forces on (page 11).

The **load torques** result from the occurring axial forces:

$$M_{L,j} = \frac{F_{x,a/e,j}}{\text{Thrust force factor}} \cdot \frac{1}{i_G \cdot \eta_G}$$

only with gearbox

Formula 6

The motor must therefore generate the following drive torques:

$$M_{M,j} = M_{B,j} + M_{L,j}$$

Formula 7

The **effective torque** can be deduced from the drive torques for all segments of the application cycle (formula 7):

$$M_{eff} = \sqrt[2]{\frac{1}{t_{total}} \cdot (M_{M1}^2 \cdot t_1 + M_{M2}^2 \cdot t_2 + \dots)}$$

Formula 8

## Motor dimensioning

- The nominal torque of the motor must exceed the calculated effective torque (formula 8).
- The peak torque of the motor must exceed the maximum occurring drive torque (formula 7).

With the aid of the "motor mounting options" chart you can check if the respective motor is mechanically compatible to the corresponding electro cylinder.

### Abbreviations used (formula 5-8)

|                   |   |
|-------------------|---|
| $M_{B,j}$         | = Variable acceleration torque in Nm  |
| $J_{i/p,0}$       | = Red. rot. mass moment of inertia at zero stroke for inline/parallel motor configuration in kgmm <sup>2</sup><br>see "Technical Data" page 8   |
| $J_{i/p, Stroke}$ | = Red. rot. mass moment of inertia per mm of stroke for inline/parallel motor configuration in kgmm <sup>2</sup><br>see "Technical Data" page 8 |
| Stroke            | = Selected stroke in mm   |
| $\eta_{ETH}$      | = Efficiency of the electro cylinder                    0.9 (inline drive configuration) 0.81 (parallel motor)                                  |
| $i_G$             | = Gearbox ratio   |
| $\eta_G$          | = Efficiency of the gearbox (see gearbox manufacturer specifications)   |
| $J_M$             | = Motor mass moment of inertia in kgmm <sup>2</sup> /mm (see motor manufacturer specifications)   |
| $J_G$             | = Gearbox mass moment of inertia in kgmm <sup>2</sup> /mm (see gearbox manufacturer specifications)   |
| $a_{K,j}$         | = Acceleration at the cylinder rod in m/s <sup>2</sup>  |
| $P_h$             | = Screw pitch in mm   |
| $M_{L,j}$         | = Load torque in Nm   |
| $F_{x,a/e,j}$     | = Loads in x direction in N (see page 11)   |
| $M_{M,j}$         | = Drive torque in Nm  |
| $M_{eff}$         | = Effective value - motor in Nm   |
| $t_{total}$       | = Total cycle time in s   |
| $t_j$             | = Amount of time in the cycle in s  |

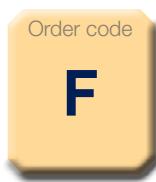

Force constant: "Technical Characteristics" see page 8.

Index "j" for the individual segments of the application cycle

## Mounting Methods

Please respect the notes in the ETH Manual (19x-550002) on the permissible screws and tightening torques.

### Standard

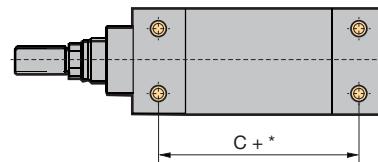

**ETH032-ETH125**

Example for parallel motor configuration

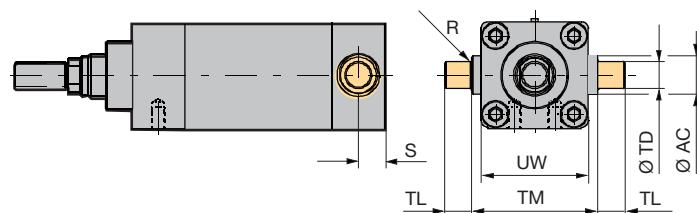

Mounting via thread on the cylinder front or end side with parallel motor configuration (ETH032-ETH125).  
("Dimensions" see page 22)

**ETH032-ETH080**

Mounting with 4 mounting threads on the underside of the profile.  
(ETH032-ETH080).  
("Dimensions" see page 22)

### Center Trunnion Mounting

Listed in the order code of the cylinder; the order number applies only for ordering spare parts. Prerequisite is a cylinder rod with external thread.

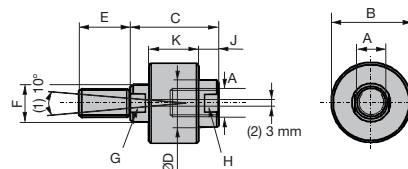

<sup>1)</sup> SW: Width across flat (position of the flat is not fixed)

## Alignment Coupler

### For mounting at the extremity of the cylinder rod

- Balances misalignments
- Enlarges the mounting tolerance
- Simplifies the cylinder mounting
- Increases the service life of the cylinder guidings
- Compensates the offset between components and relieves the guiding from lateral force influences
- The traction/thrust force bearing capacity remains

(1): Angle offset  
(2): Radial offset  
E: Hole dimension for depth

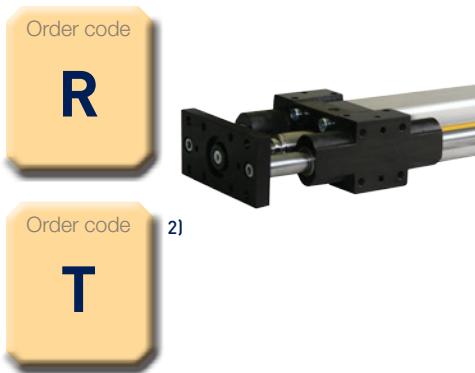

|               | Part No.        | Weight | A                   | B     | C     | ØD   | E    | F    | G    | H    | J    | K    |

Listed in the order code of the cylinder; the order number applies only for ordering spare parts. Prerequisite is a cylinder rod with external thread. Only available in protection option A (IP54 with galvanized screws).

<sup>1)</sup> Subsequent conversion from rod end can only be made in our factory.

<sup>2)</sup> Attention: Thread M39x2 differs from the standard (M42x2).

## Outrigger Bearing

### Function of outrigger bearing:

- Additional stability and precision
- Anti-rotation device for higher torques
- Absorption of lateral forces

### Versions

#### Option R:

##### Outrigger bearing with ball bushings

(available only in protection class option A, "Order Code" see page 54)

- Main casting extruded aluminum
- 2 hardened steel guiding rods, surface hard-chrome plated
- Linear ball bearings

#### Option T:<sup>2)</sup>

##### Outrigger bearing with slide bushings

(for all protection options, standard with options B & C, "Order Code" see page 54)

- Main casting extruded aluminum
- 2 guiding rods stainless steel
- Sliding guides

When sizing the drive train of an ETH electro cylinder with outrigger bearing and sliding bushings, increased friction losses in the sliding bushings must be taken into consideration

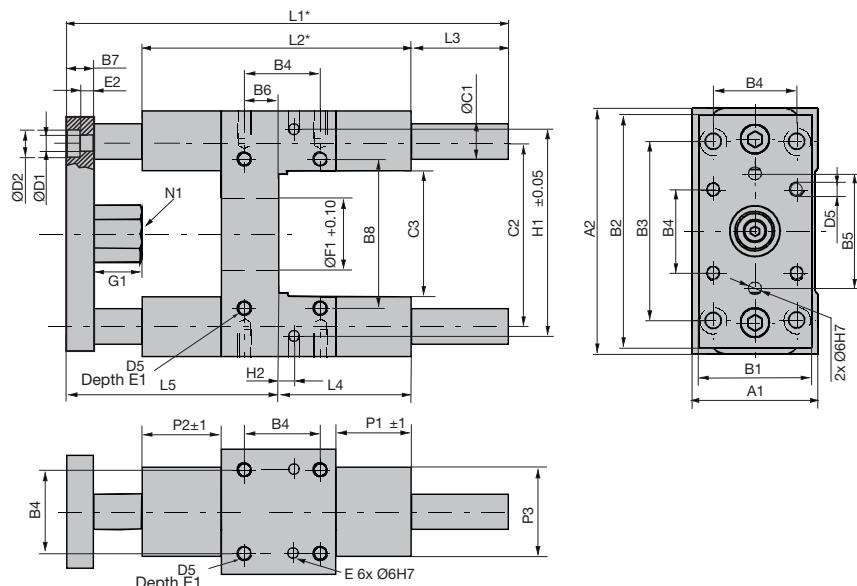

#### Note:

<sup>1)</sup> xxxx corresponds to the customized stroke. For information about this value please contact Parker.

<sup>2)\*</sup> = Measure + Length of desired stroke ("Dimensions" see page 22).

available for ETH032-ETH080.  
For the ETH080, the standard pneumatic outrigger bearing modules cannot be used.

<sup>2)</sup> not for ATEX

# Accessories

## Force sensors - Spherical rod eye with integrated force sensor

Swivel heads are important construction components with respect to rotary, pivoting and tilting movements. Force measurements are more and more frequently required in applications.

The force transducers are suitable for direct mounting on the cylinder rod. They can, for example, be used to measure contact forces or overloads. Thanks to the thin film technology, the swivel head force transducers are very robust and reliable. An integrated amplifier emits an output signal of 4...20 mA.

The sensors correspond to the EN 61326 standard for electromagnetic compatibility (EMC) and are sized to pick up traction/thrust forces.

### Features

- Measuring range:  
Traction/thrust forces up to ±114 kN
- Thin film implants (instead of conventional bonded foil strain gauges)
- Corrosion resistant stainless steel version
- Integrated amplifier
- Small temperature drift
- Long term stability
- High shock and vibration resistance
- For dynamic or static measurements
- Good repeatability
- Simple mounting
- Also available in ATEX design <sup>1) 2)</sup>. Authorized for gas atmospheres zone 1 and zone 2.

II 2G Ex ib IIC T4

Connection of the force sensors to Compax3 with Option M21 is possible.

For ETH032-ETH080: Only possible with cylinder rod end "M" (external thread).

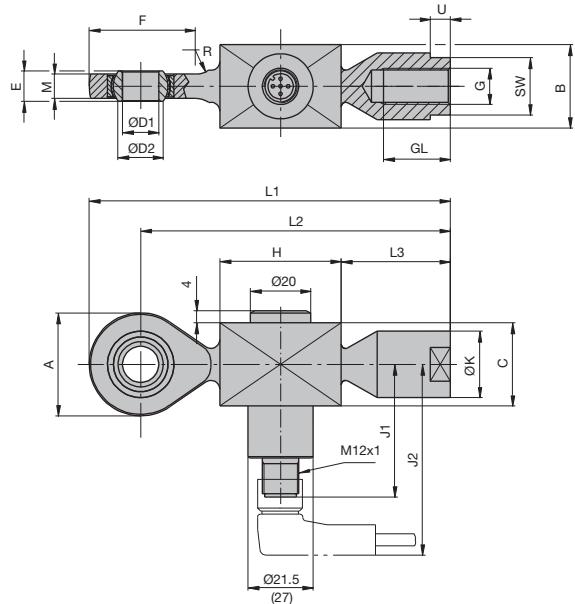

For ETH100, ETH125: Only possible with cylinder rod end "K".

A subsequent conversion from another rod end to M or K is generally **NOT** possible.

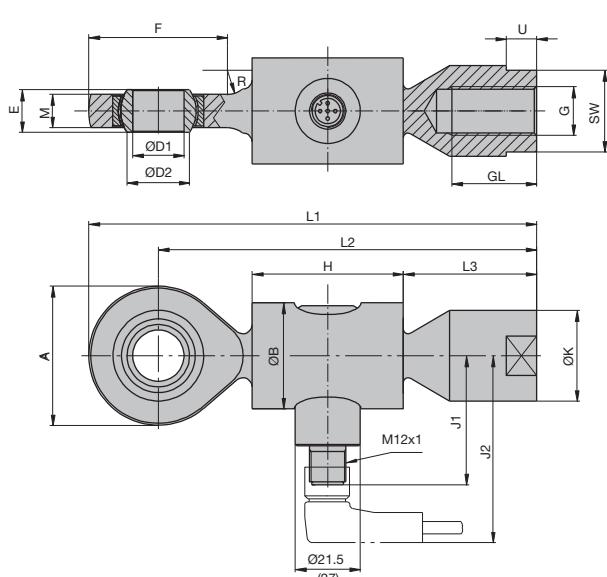

<sup>1)</sup> The ATEX approval of the force sensors is only met, if the sensor is operating with an ATEX authorized isolated switch amplifiers and an ATEX authorized cable.

<sup>2)</sup> Please refer to the installation and operating instructions in the supplied operating manual.

## Initiators / Limit Switches

### Sensors for non-explosive atmospheres

The position sensors can be mounted in the longitudinal grooves of the cylinder body and are flush to the body; eliminating protruding edges. The initiator cable is hidden under the yellow cover. The permanent

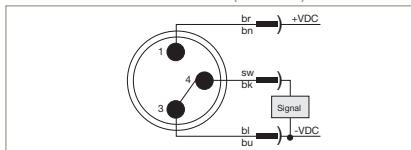

magnet integrated into the screw nut actuates the initiators. Fitting sensors are available as optional accessories.

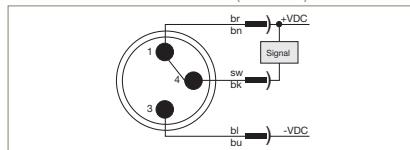

ETH032, ETH050 2 grooves each on 2 opposite sides.  
ETH080, ETH100 2 grooves each on all sides.

**The following initiator types are available for the ETH cylinder series:**

PNP Sensor (P8S-...)

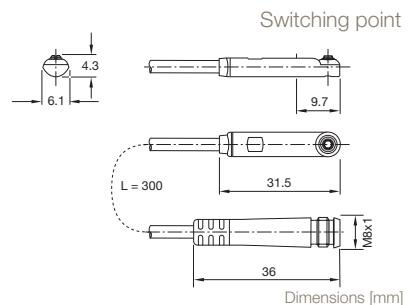

NPN Sensor (P8S-...)

**Info:** Only use PNP types for ETH with Compax3.

Variant 1: X12 Input - direct

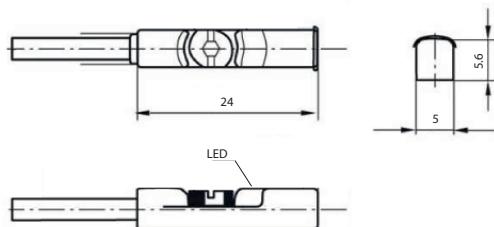

## Sensors for explosive atmospheres (ATEX) <sup>1)</sup>

In explosive atmospheres ATEX approved sensors must be used exclusively. Parker magnetic cylinder sensors are rated as intrinsically safe electrical equipment. They must be used with isolated switch amplifiers with

certificates of conformity for explosive atmospheres. These sensors are not completely flush with the profile: the initiators protrude by about 1 mm.

Dimensions [mm]

<sup>1)</sup> Please refer to the installation and operating instructions in the supplied manual.

**ETH with Compax3\***

- a) Part No.: 085-202082 - 1 connector
- b) Part No.: SSK24/... - Cable with 2 connectors
- c) Terminal block without luminous indicator - Part No.: EAM06/01
- d) Terminal block with luminous indicator - Part No.: EAM06/02

\* The ATEX approval of the NAMUR sensor is only met, if the sensor is operating with an ATEX authorized isolated switch amplifiers.

# Drive Train Selection<sup>1)</sup>

## Example for Sizing with Predefined Drive Trains

In order to simplify the dimensioning process for a complete drive train, We have prepared an overview of predefined electro cylinders, gearboxes, motors and servo drives, which can be found on the following pages.

With a few parameters, you can directly find the order code for the required components.

Note the boundary conditions!

### The following application parameters are required:

- The equivalent axial force.  
(Calculation page 13 formula 3 with the forces determined as described on page 11).
- The maximum speed.

### Working with the drive train table

- Select the drive trains providing the required axial force (e.g. by drawing a vertical line).
- Then select from this choice the drive trains, that are able to travel at the required speed (e.g. by drawing a second vertical line).
- The suitable drive train can then be selected from the remaining choice, if necessary by comparing additional characteristics.

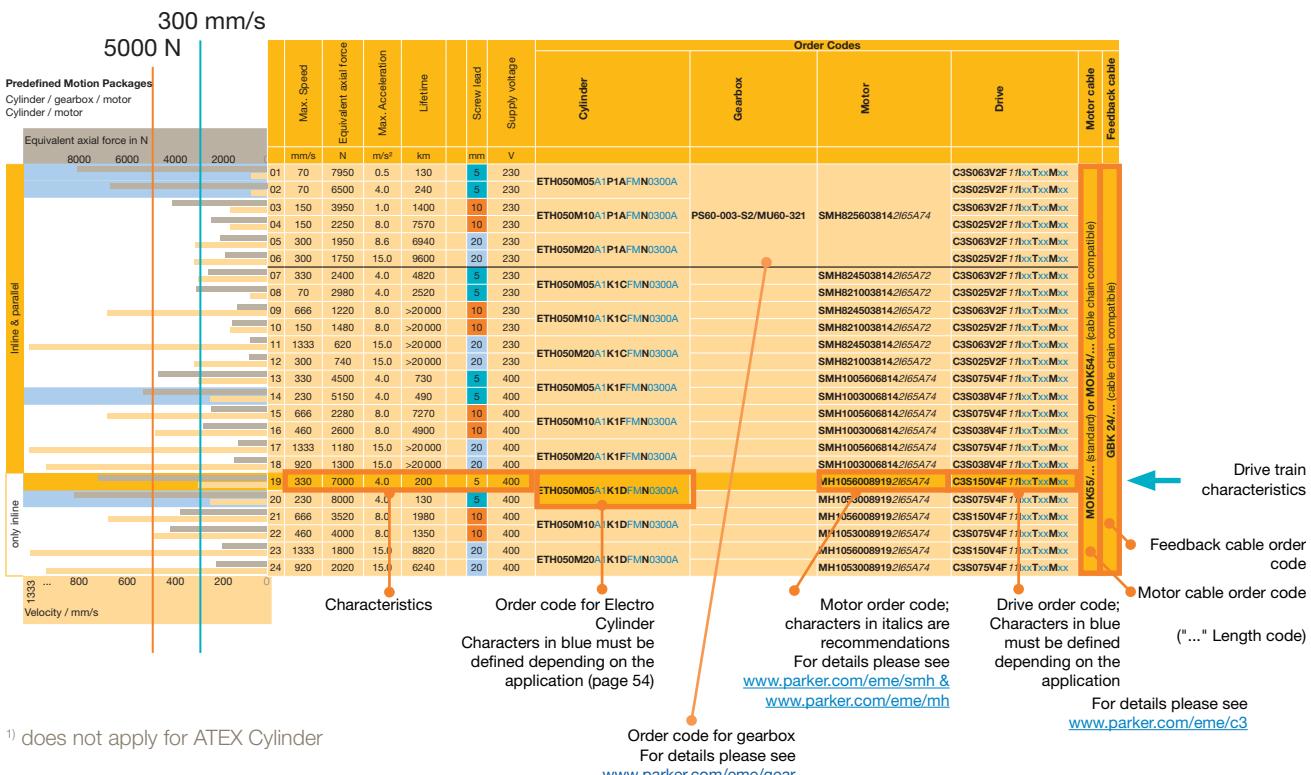

Please check if all given characteristics (such as max. acceleration, supply voltage etc.) are suitable for your application.

### Example:

Required data

Equivalent axial force: 5000 N  
Speed: 300 mm/s

<sup>1)</sup> does not apply for ATEX Cylinder

## Predefined Motion Packages ETH032<sup>1)</sup>

### with Compax3, PSD1

In order to simplify the representation, we assumed boundary conditions which must be adhered to without exception in your application, otherwise the product combinations suggested here might not work. In this case, the application must be dimensioned conventionally.

<sup>1)</sup> does not apply for ATEX Cylinder

#### Basic Application Assumptions:

- Stroke from 50 to 400 mm
- Horizontal movement
- The characteristics of the individual components are not to be exceeded
  - with parallel motor: respect transmissible torque depending on the motor speed n
  - permissible axial thrust forces must be respected
  - Ambient conditions
  - ...
- Linear acceleration
- Maximum acceleration given = deceleration times
- Application factor = 1.0
- The calculation is based on the assumption: without standstill time (i.e. if there are standstill times in the application, only the power reserve is increased)
- 40 °C ambient temperature, with gearbox 20 °C ambient temperature
- up to 1000 m above sea level

#### Basic Application Assumptions:

- Stroke from 50 to 600 mm
- Horizontal movement
- The characteristics of the individual components are not to be exceeded
  - with parallel motor: respect transmissible torque depending on the motor speed n
  - permissible axial thrust forces must be respected
- Ambient conditions
- ...
- Linear acceleration
- Maximum acceleration given = deceleration times
- Application factor = 1.0
- The calculation is based on the assumption: without standstill time (i.e. if there are standstill times in the application, only the power reserve is increased)
- 40 °C ambient temperature, with gearbox 20 °C ambient temperature
- up to 1000 m above sea level

Order codes:

**bold:** mandatory so that the package is combinable

*italics:* recommended/standard

**blue:** must be selected depending on the application

Hint: The examples shown here are meant to help with the dimensioning process. As many parameters interact in this kind of drive package, the examples make no claim to be complete.

## Predefined Motion Packages ETH080<sup>1)</sup>

### with Compax3, PSD1

In order to simplify the representation, we assumed boundary conditions which must be adhered to without exception in your application, otherwise the product combinations suggested here might not work. In this case, the application must be dimensioned conventionally.

<sup>1)</sup> does not apply for ATEX Cylinder

### Predefined Motion Packages

Cylinder / gearbox / motor / drive controller / cable

|                                      | Equivalent axial force in N | Max. Speed | Equivalent axial force | Max. Acceleration | Lifetime | Screw lead | Supply voltage | Cylinder |                        |

#### Basic Application Assumptions:

- Stroke from 50 to 800 mm
- Horizontal movement
- The characteristics of the individual components are not to be exceeded
  - with parallel motor: respect transmissible torque depending on the motor speed n
  - permissible axial thrust forces must be respected
  - Ambient conditions
  - ...
- Linear acceleration
- Maximum acceleration given = deceleration times
- Application factor = 1.0
- The calculation is based on the assumption: without standstill time (i.e. if there are standstill times in the application, only the power reserve is increased)
- 40 °C ambient temperature, with gearbox 20 °C ambient temperature
- up to 1000 m above sea level

Order codes:

**bold:** mandatory so that the package is combinable

*italics:* recommended/standard

**blue:** must be selected depending on the application

Hint: The examples shown here are meant to help with the dimensioning process. As many parameters interact in this kind of drive package, the examples make no claim to be complete.

## Predefined Motion Packages ETH100, ETH125 <sup>1)</sup>

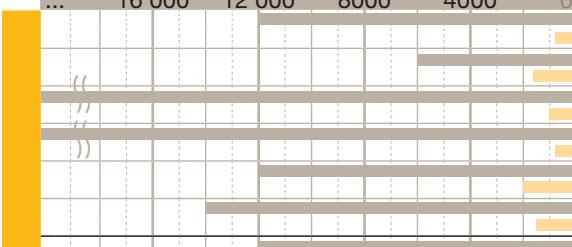

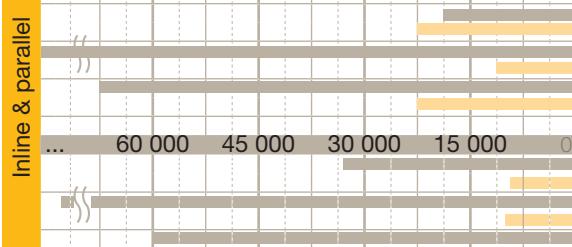

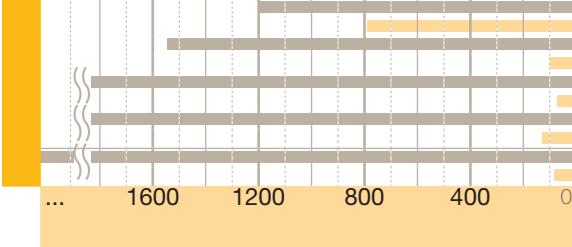

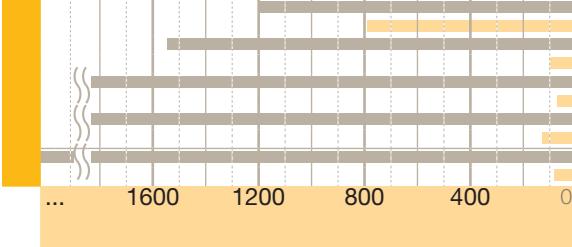

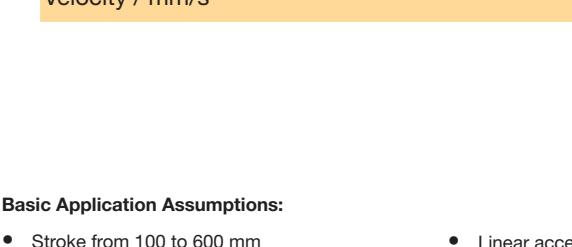

### with Compax3, PSD1

In order to simplify the representation, we assumed boundary conditions which must be adhered to without exception in your application, otherwise the product combinations suggested here might not work. In this case, the application must be dimensioned conventionally.

<sup>1)</sup> does not apply for ATEX Cylinder

### Predefined Motion Packages

Cylinder / gearbox / motor / drive controller / cable

|  | Max. Speed | Equivalent axial force | Max. Acceleration | Lifetime | Screw lead | Supply voltage | Cylinder |                        |

Order codes:

**bold:** mandatory so that the package is combinable

*italics:* recommended/standard

**blue:** must be selected depending on the application

Hint: The examples shown here are meant to help with the dimensioning process. As many parameters interact in this kind of drive package, the examples make no claim to be complete.

| xxx  | ATEX release<br>xxx ATEX Applications-Identification No. xxx |

- <sup>1)</sup> ETH080-ETH125 features 2 grooves each on all 4 sides (i.e. Code B=A or D=C, F=E, H=G, K=J), therefore codes A, C, E, G, J are possible for ETH080-ETH125.
- <sup>2)</sup> With parallel configuration, the motor may block access to the sensors and the lubrication port.
- <sup>3)</sup> Relubrication options 2-5:  
The standard lubrication port is without function.  
In case of actuators with very short strokes, the position of the lubrication port in the center of the profile may not be possible.  
For more information see mounting instructions.
- <sup>4)</sup> Please check cylinder motor/gearbox combination with the aid of the table ("Motor Mounting Options" see page 23).
- <sup>5)</sup> Order Code SMH100-B5/14: "SMH100.....ET..." (the motor shaft diameter is replaced by the term "ET") (not in the motors catalog) only with feedback: Resolver, A7
- <sup>6)</sup> Not with motor mounting options A & B.
- <sup>7)</sup> Not for thrust rod R, T
- <sup>8)</sup> Not for ETH100, ETH125
- <sup>9)</sup> Please observe the explanations "ETH - Electro Thrust Cylinder for ATEX Environment" see page 12

## Software & Tools

- Actuator database
  - A special actuator database is available in the Compax3 ServoManager. You can simply enter the ETH type code for automatic controller parameterization.
- CAD-Configurator
  - Configure your electro cylinder CAD data online.  
[www.parker.com/eme/eth](http://www.parker.com/eme/eth)
- Dimensioning tool "EL-Sizing"
  - A dimensioning tool simplifies the dimensioning process.

# Parker's Motion & Control Technologies

**At Parker, we're guided by a relentless drive to help our customers become more productive and achieve higher levels of profitability by engineering the best systems for their requirements. It means looking at customer applications from many angles to find new ways to create value. Whatever the motion and control technology need, Parker has the experience, breadth of product and global reach to consistently deliver. No company knows more about motion and control technology than Parker. For further info call 00800 27 27 5374**

## Aerospace

### Key Markets

- Aftermarket services
- Commercial transports
- Engines
- General & business aviation
- Helicopters
- Launch vehicles
- Military aircraft
- Missiles
- Power generation
- Regional transports
- Unmanned aerial vehicles

### Key Products

- Control systems & actuation products
- Engine systems & components
- Fluid conveyance systems & components
- Fluid metering, delivery & atomization devices
- Fuel systems & components
- Fuel tank inerting systems
- Hydraulic systems & components
- Thermal management
- Wheels & brakes

## Climate Control

### Key Markets

- Agriculture
- Air conditioning
- Construction Machinery
- Food & beverage
- Industrial machinery
- Life sciences
- Oil & gas
- Precision cooling
- Process
- Refrigeration
- Transportation

### Key Products

- Accumulators
- Advanced actuators
- CO<sub>2</sub> controls
- Electronic controllers
- Filter driers
- Hand shut-off valves
- Heat exchangers
- Hose & fittings
- Pressure regulating valves
- Refrigerant distributors
- Safety relief valves
- Smart pumps
- Solenoid valves
- Thermostatic expansion valves

## Electromechanical

### Key Markets

- Aerospace
- Factory automation
- Life science & medical
- Machine tools
- Packaging machinery
- Paper machinery
- Plastics machinery & converting
- Primary metals
- Semiconductor & electronics
- Textile
- Wire & cable

### Key Products

- AC/DC drives & systems
- Electric actuators, gantry robots & slides
- Electrohydraulic actuation systems
- Electromechanical actuation systems
- Human machine interface
- Linear motors
- Stepper motors, servo motors, drives & controls
- Structural extrusions

## Filtration

### Key Markets

- Aerospace
- Food & beverage
- Industrial plant & equipment
- Life sciences
- Marine
- Mobile equipment
- Oil & gas
- Power generation & renewable energy
- Process
- Transportation
- Water Purification

### Key Products

- Analytical gas generators
- Compressed air filters & dryers
- Engine air, coolant, fuel & oil filtration systems
- Fluid condition monitoring systems
- Hydraulic & lubrication filters
- Hydrogen, nitrogen & zero air generators
- Instrumentation filters
- Membrane & fiber filters
- Microfiltration
- Sterile air filtration
- Water desalination & purification filters & systems

## Fluid & Gas Handling

### Key Markets

- Aerial lift
- Agriculture
- Bulk chemical handling
- Construction machinery
- Food & beverage
- Fuel & gas delivery
- Industrial machinery
- Life sciences
- Marine
- Mining
- Mobile
- Oil & gas
- Renewable energy
- Transportation

### Key Products

- Check valves
- Connectors for low pressure fluid conveyance
- Deep sea umbilicals
- Diagnostic equipment
- Hose couplings
- Industrial hose
- Mooring systems & power cables
- PTFE hose & tubing
- Quick couplings
- Rubber & thermoplastic hose
- Tube fittings & adapters
- Tubing & plastic fittings

## Hydraulics

### Key Markets

- Aerial lift
- Agriculture
- Alternative energy
- Construction machinery
- Forestry
- Industrial machinery
- Machine tools
- Marine
- Material handling
- Mining
- Oil & gas
- Power generation
- Refuse vehicles
- Renewable energy
- Truck hydraulics
- Turf equipment

### Key Products

- Accumulators
- Cartridge valves
- Electrohydraulic actuators
- Human machine interfaces
- Hybrid drives
- Hydraulic cylinders
- Hydraulic motors & pumps
- Hydraulic systems
- Hydraulic valves & controls
- Hydrostatic steering
- Integrated hydraulic circuits
- Power take-offs
- Power units
- Rotary actuators
- Sensors

## Pneumatics

### Key Markets

- Aerospace
- Conveyor & material handling
- Factory automation
- Life science & medical
- Machine tools
- Packaging machinery
- Transportation & automotive

### Key Products

- Air preparation
- Brass fittings & valves
- Manifolds
- Pneumatic accessories
- Pneumatic actuators & grippers
- Pneumatic valves & controls
- Quick disconnects
- Rotary actuators
- Rubber & thermoplastic hose & couplings
- Structural extrusions
- Thermoplastic tubing & fittings
- Vacuum generators, cups & sensors

## Process Control

### Key Markets

- Alternative fuels
- Biopharmaceuticals
- Chemical & refining
- Food & beverage
- Marine & shipbuilding
- Medical & dental
- Microelectronics
- Nuclear Power
- Offshore oil exploration
- Oil & gas
- Pharmaceuticals
- Power generation
- Pulp & paper
- Steel
- Water/wastewater

### Key Products

- Analytical Instruments
- Analytical sample conditioning products & systems
- Chemical injection fittings & valves
- Fluoropolymer chemical delivery fittings, valves & pumps
- High purity gas delivery fittings, valves, regulators & digital flow controllers
- Industrial mass flow meters/controllers
- Permanent no-weld tube fittings
- Precision industrial regulators & flow controllers
- Process control double block & bleeds
- Process control fittings, valves, regulators & manifold valves
- Regulators
- Valves

## Sealing & Shielding

### Key Markets

- Aerospace
- Chemical processing
- Consumer
- Fluid power
- General industrial
- Information technology
- Life sciences
- Microelectronics
- Military
- Oil & gas
- Power generation
- Renewable energy
- Telecommunications
- Transportation

### Key Products

- Dynamic seals
- Elastomeric o-rings
- Electro-medical instrument design & assembly
- EMI shielding
- Extruded & precision-cut, fabricated elastomeric seals
- High temperature metal seals
- Homogeneous & inserted elastomeric shapes
- Medical device fabrication & assembly
- Metal & plastic retained composite seals
- Shielded optical windows
- Silicone tubing & extrusions
- Thermal management
- Vibration dampening
