OSP Concept

The right to introduce technical modifications is reserved

ORIGA SYSTEM PLUS
– One Concept
– Three Actuator Options

Based on the concept of the rodless pneumatic cylinder, well proven worldwide, Parker now offers the complete solution for actuator systems. Developed for absolute reliability, high performance, easy handling and optimized design, ORIGA SYSTEM PLUS can master even the most difficult installation requirements.

ORIGA SYSTEM PLUS

is a completely modular concept, enabling pneumatic and electric actuators to be combined with guides and control modules for all kinds of applications. The main system carriers are the actuators themselves, consisting of extruded aluminium profiles with double dovetail slots on three sides, providing direct mounting for all modular options.

MODULAR SYSTEM

- **Electric Belt Actuator**
  – For applications with higher speeds and precise movement and positioning for longer travel.
- **Electric Screw Actuator**
  – For higher actuator power and precise movement and positioning.
- **Pneumatic Actuator**
  – For a wide variety of applications with simple handling, combined with simple control possibilities and a broad power spectrum
  – Ideal for fast, repetitive movements and simple positioning duties.
- 18 additional guide variants provide any required precision, performance and load capacity.
- Compact solutions, easy to install and simple to retrofit.
- Valves and control elements can be mounted directly on the pneumatic actuator.
- A wide range of mounting options provides great installation flexibility.

For further information see the Pneumatic Actuators Catalogue P-A4P011GB.

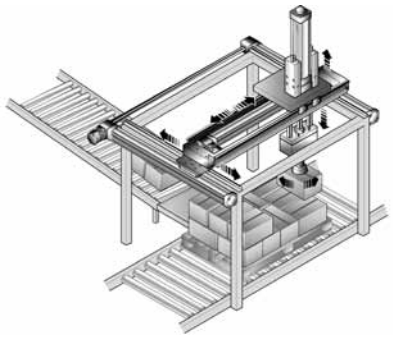
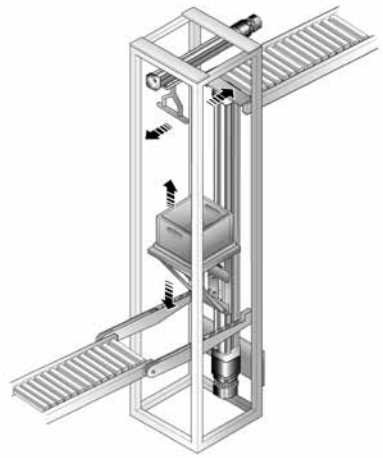
Applications for OSP-E Actuators

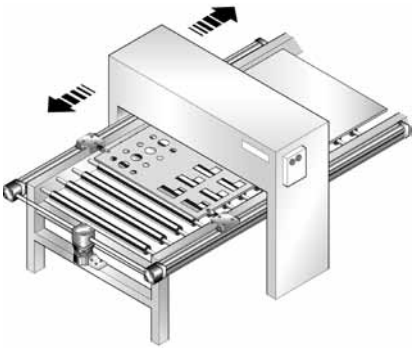
Auto Handling
– high speed pick and place movements



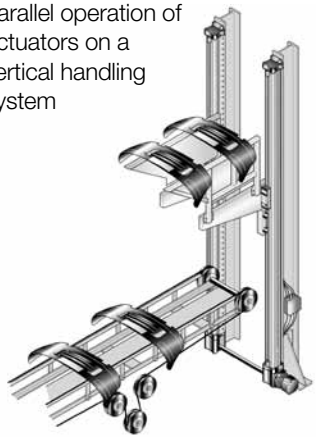
Material Handling Systems
– vertical and horizontal transfer movements



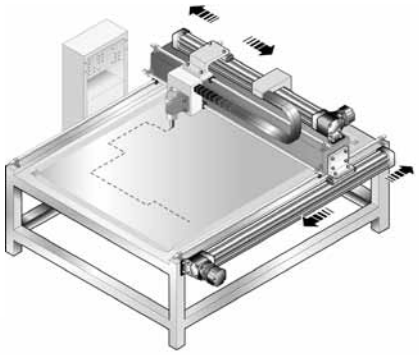
Punching Machines
– accurate feeding and positioning



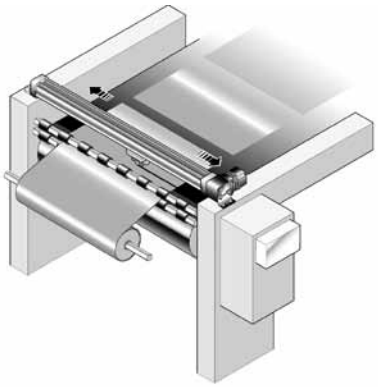
Mechanical Handling
– parallel operation of actuators on a vertical handling system



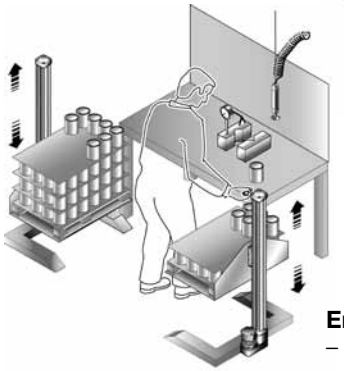
Profile Cutting Machines
– intricate profile movements of water jets and lasers



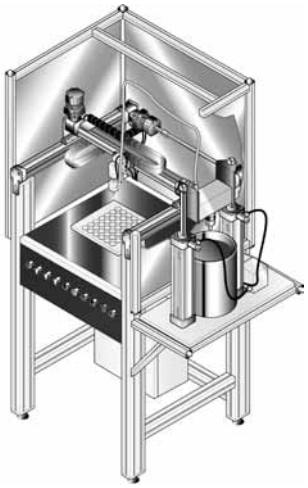
Slitting Machines
– high speed traverse applications for the slicing of papers and textiles



Spray Coating
– synchronized high speed bi-parting movements



Automated Filling Machines
– accurate 3-axis positioning

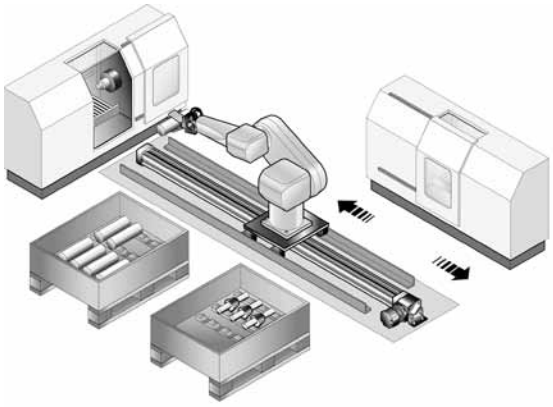


Automatic Doors and Guards
– simple bi-parting operation

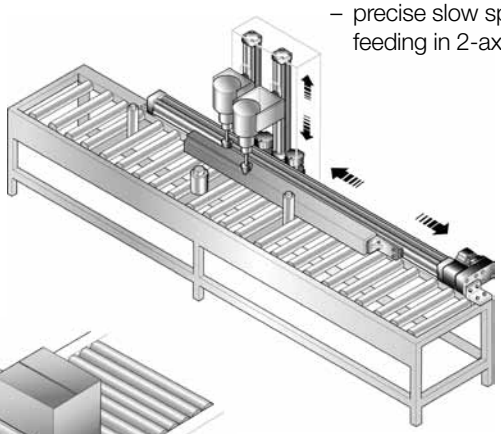
Ergonomic Workstations
– adjustment of working levels

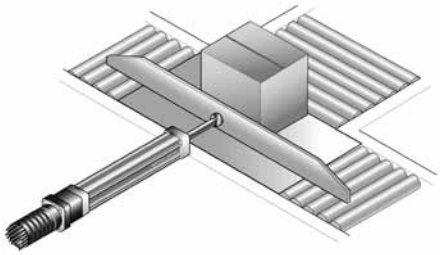
Applications for OSP-E Actuators

Robotic Installations
– traverse of robots between work stations

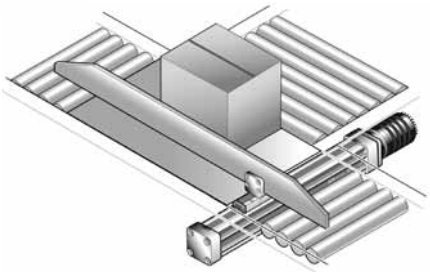


Milling Machines
– precise slow speed feeding in 2-axis

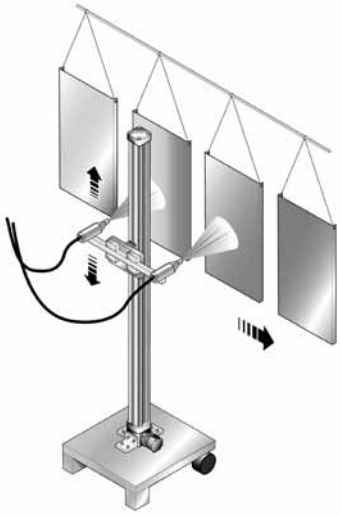




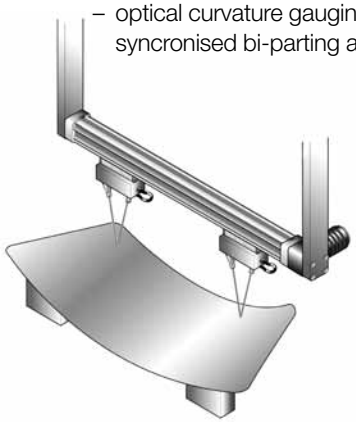
Conveyor Systems
– simple cross-transfer actuators



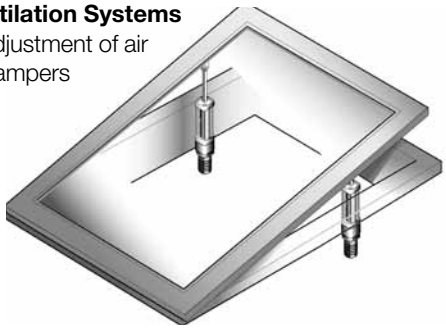
Spraying Equipment
– precision reciprocating action



Measuring Systems
– optical curvature gauging using syncronised bi-parting actuation

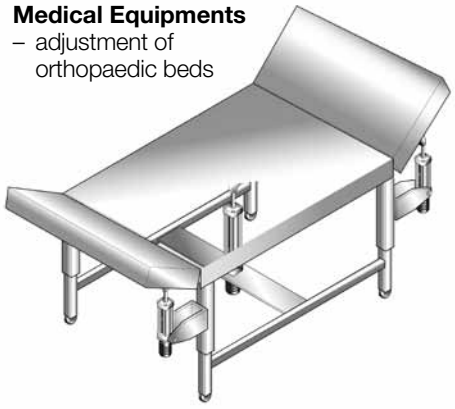


Ventilation Systems
– adjustment of air dampers

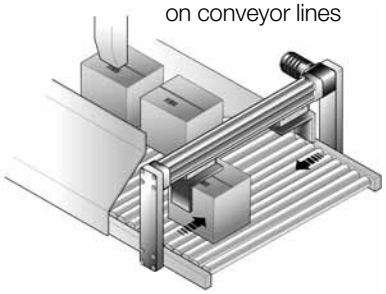


Mobile Lifting Systems
– lifting devices for industrial safety

Medical Equipments
– adjustment of orthopaedic beds



Conveyor Systems
– centring of packages on conveyor lines



OSP-E..BHD Belt Actuator with Integrated Guide

Ball Bearing Guide
Roller Guide

Content

Belt Actuator with Integrated Guide for Heavy Duty Applications

The latest generation of high capacity actuators, the OSP-E..BHD series combines robustness, precision and high performance. The aesthetic design is easily integrated into any machine constructions by virtue of extremely adaptable mountings.

Belt Actuator with Integrated Guide - selective with Ball Bearing Guide or Roller Guide

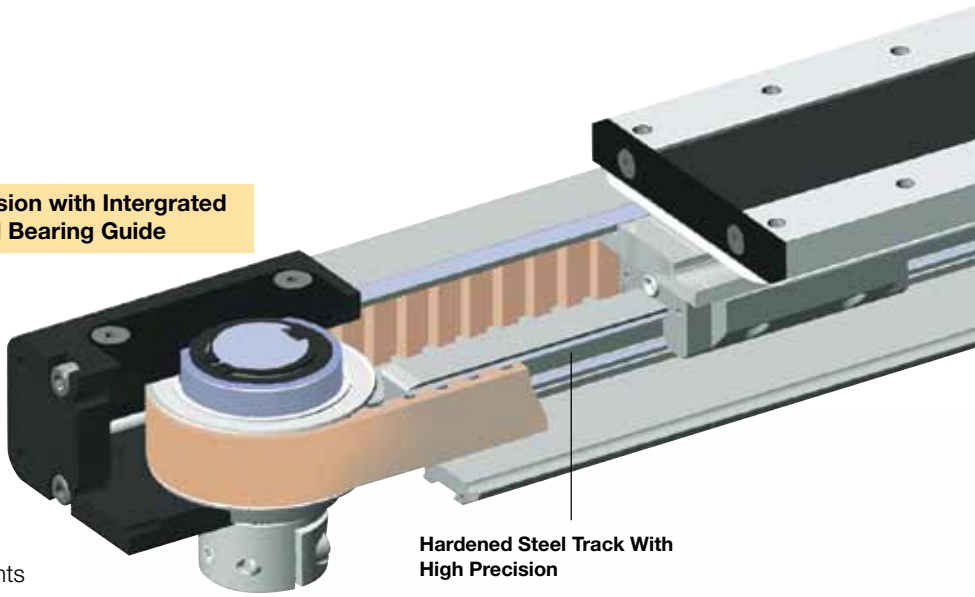
Advantages:

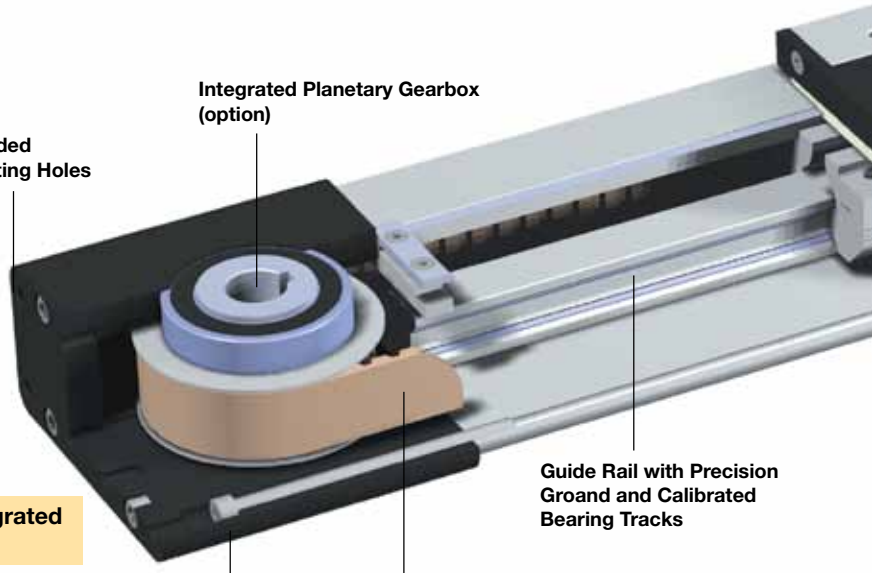
- Accurate Path and Position Control
- High Force Output
- High Speed Operation
- High Load Capacity
- Easy Installation
- Low Maintenance
- Ideal for Multi-Axis Applications

Features:

- Integrated Ball Bearing Guide or Integrated Roller Guide
- Diverse Range of Multi-Axis Connection Elements
- Diverse Range of Accessories and Mountings
- Complete Motor and Control Packages
- Optional Integrated Planetary Gearbox
- Special Options on Request

Version with Intergrated Ball Bearing Guide



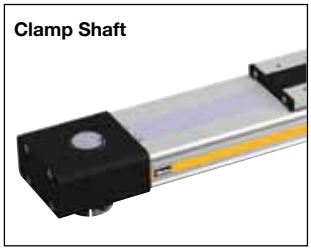


Version with Integrated Roller Guide

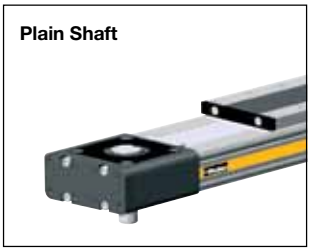
Clamp Shaft
– for „zero-backlash“ coupling of motors and external gear arrangements

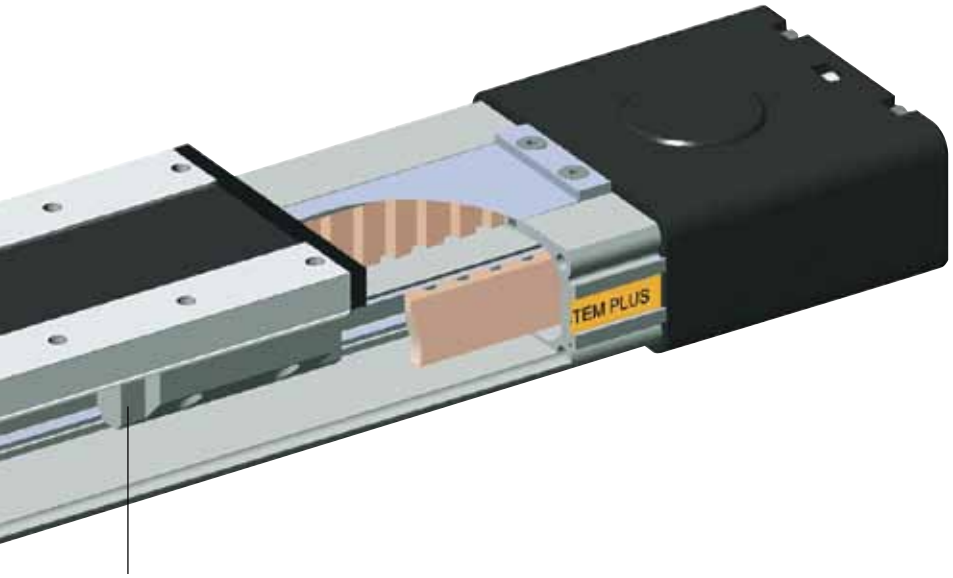
Drive Shaft Versions

Clamp Shaft



Plain Shaft



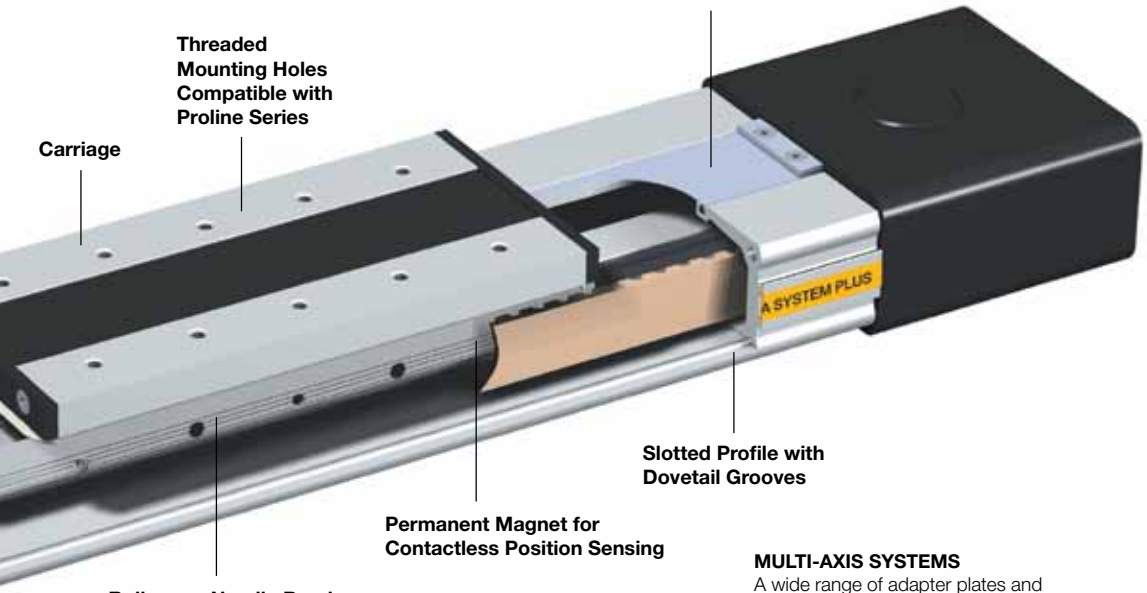


Steel Runner Block with Integrated Scraper System and Grease Nipples

Corrosion Resistant Steel Sealing Band

Threaded Mounting Holes Compatible with Proline Series

Carriage

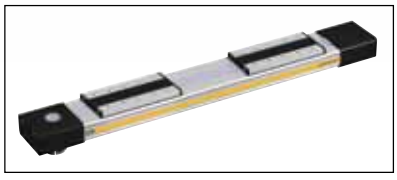


Slotted Profile with Dovetail Grooves

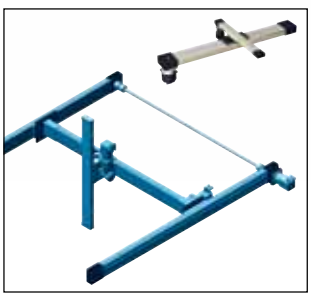
Permanent Magnet for Contactless Position Sensing

Rollers on Needle Bearings For Smooth Operation up to 10 m/s.

BI-PARTING Version
for perfectly synchronised bi-parting movements.

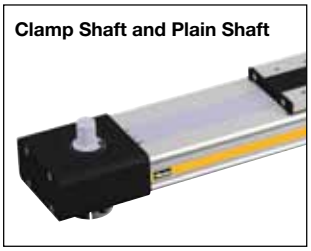


MULTI-AXIS SYSTEMS
A wide range of adapter plates and intermediate drive shafts simplify engineering and installation



Drive Shaft OPTIONS

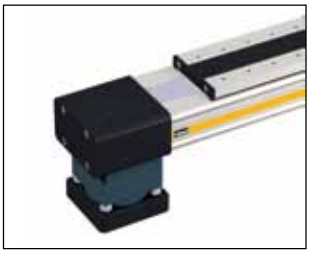
Clamp Shaft and Plain Shaft



Hollow Shaft with Keyway

OPTION

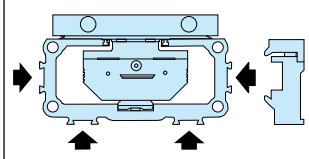
Integrated planetary gearbox



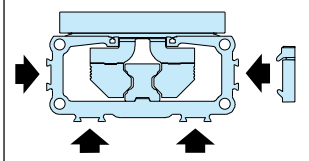
- **Highly compact and rigid solution fully integrated in the drive cap housing**
- **Purpose designed for the BHD series**
- **Available with three standard ratios (3, 5 and 10)**
- **Very low backlash**
- **A wide range of available motor flanges**

The dovetailed mounting rails of the new linear actuator expand its function into that of a universal system carrier.
Modular system components are simply clamped on.

Version with Integrated Ball Bearing Guide



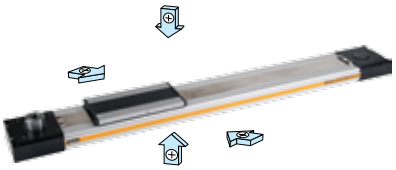
Version with Integrated Roller guide



OSP-E..BHD Belt Actuator with Integrated Guide

Standard Versions
OSP-E..BHD

Standard carrier with integrated guide and magnets for contactless position sensing. Dovetail profile for mounting of accessories and the actuator itself.

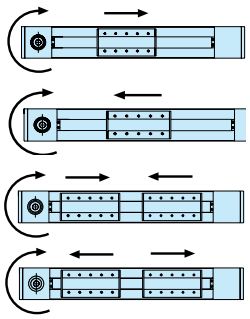


Drive Shaft with Clamp Shaft

Drive Shaft with Plain Shaft

Actuating Direction

Important in parallel operations, e.g. with intermediate drive shaft



Standard

Standard – bi-parting Version

Options

Tandem

For higher moment support

Bi-parting Version

For perfectly synchronised bi-parting movements.

Drive Shaft with Clamp and Plain Shaft

For connections with intermediate drive shaft

Hollow Shaft with Keyway

For close coupling of motors and external gears

Integrated Planetary Gearbox

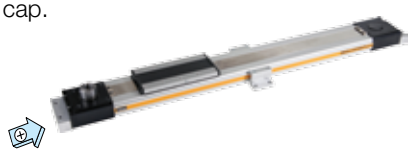
For compact installation and very low backlash

Accessories

Motor Mountings

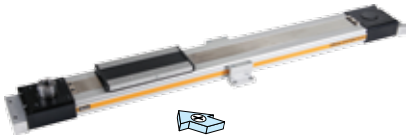
End Cap Mounting

For mounting the actuators on the end cap.



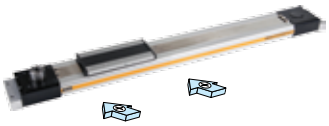
Profile Mounting

For supporting long actuators or mounting the actuators on dovetail grooves



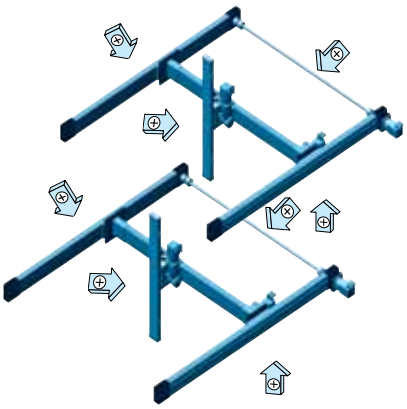
Magnetic Sensors Type RS / ES

For contactless position sensing of end stop and intermediate carrier positions.



Multi-Axis-Systems

For modular assembly of actuators up to multi-axis systems.



Standard Versions

- Belt Actuator with Integrated Ball Bearing Guide
- Drive Shaft with Clamp Shaft or Plain Shaft
- Choice of Motor Mounting Side
- Dovetail Profile for Mounting of Accessories and the Actuator itself

Options

- Tandem Version for Higher Moments
- Bi-parting Version for Synchronised Movements
- Integrated Planetary Gearbox
- Drive Shaft with
  - Clamp Shaft and Plain Shaft
  - Hollow Shaft with Keyway
- Special Drive Shaft Versions on Request

Characteristics

		Symbol	Unit	Description
General Features				
Series				OSP-E..BHD
Name				Belt Acutator with Integrated Ball Bearing Gear
Mounting				see drawings
Ambient Temperature Range		ϑ_{min} ϑ_{max}	°C °C	-30 +80
Weight (mass)			kg	see table
Installation				in any position
Material	Slotted profile			Extruded Anodized Aluminium
	Belt			Steel-corded Polyurethane
	Pulley			Aluminium
	Guide			Ball Bearing Guide
	Guide Rail			Hardened Steel Rail with High Precision, Accuracy Class N
	Guide Carrier			Steel Carrier with Integrated Wiper System, Grease Nipples, Preloaded 0.02 x C, Accuracy Class H
	Sealing Band			Hardened, Corrision Resistant Steel
	Screws, Nuts			Zinc Plated Steel
	Mountings			Zinc Plated Steel and Aluminium
Protection Class			IP	54

Weight (mass) and Inertia

Series	Weight (mass) [kg]			Inertia [x 10^{-6} kgm^2]		
	at stroke 0 m	add per metre stroke	moving mass	at stroke 0 m	add per metre stroke	per kg mass
OSP-E20BHD	2.8	4.0	0.8	280	41	413
OSP-E25BHD	4.3	4.5	1.5	1,229	227	821
OSP-E32BHD	8.8	7.8	2.6	3,945	496	1459
OSP-E50BHD	26.0	17.0	7.8	25,678	1,738	3,103
OSP-E20BHD*	4.3	4.0	1.5	540	41	413
OSP-E25BHD*	6.7	4.5	2.8	2,353	227	821

OSP-E50BHD*	40.0	17.0	15.0	49,180	1,738	3,103

*Version: Tandem and Bi-parting (Option)

Installations Instructions

Use the threaded holes in the end cap for mounting the actuator. Check if profile mountings are needed using the maximum allowable unsupported length graph on page 17. At least one end cap must be secured to prevent axial sliding when profile mountings are used.

Maintenance

Depending on operating conditions, inspection of the actuator is recommended after 12 months or 3000 km operation. Please refer to the operating instructions supplied with the actuator.

First service start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded. Before taking the actuator as a machine into service, the user must ensure the adherence to the EC Machine Directive 2006/42/EG.

Sizing of Actuator

The following steps are recommended:

1. Determination of the lever arm length l_x, l_y and l_z from m_e to the centre axis of the actuator.
2. Calculation of the load F_x or F_y to the carrier caused by m_e
   $F = m_e \cdot g$
3. Calculation of the static and dynamic force F_A which must be transmitted by the belt.
   $F_{A(horizontal)} = F_a + F_0$
   $= m_g \cdot a + M_0 \cdot 2\pi / U_{ZR}$
   $F_{A(vertical)} = F_g + F_a + F_0$
   $= m_g \cdot g + m_g \cdot a + M_0 \cdot 2\pi / U_{ZR}$
4. Calculation of all static and dynamic moments M_x, M_y and M_z which occur in the application.
   $M = F \cdot l$
5. Selection of maximum permissible loads via Table T3.
6. Calculation and checking of the combined load, which must not be higher than 1.
7. Checking of the maximum torque that occurs at the drive shaft in Table T2.
8. Checking of the required action force F_A with the permissible load value from Table T1.

For motor sizing, the effective torque must be determined, taking into account the cycle time.

Legend

- l = distance of a mas s in the x-, y- and z-direction from the guide [m]
- m_e = external moved mass [kg]
- m_{LA} = moved mass of actuator [kg]
- m_g = total moved mass ($m_e + m_{LA}$) [kg]
- $F_{x/y}$ = load excerted on the carrier in dependence of the installation position [N]
- F_A = action force [N]
- M_0 = no-load torque [Nm]
- U_{ZR} = circumference of the pulley (linear movement per revolution) [m]
- g = gravity [m/s²]
- $a_{max.}$ = maximum acceleration [m/s²]

Performance Overview

T1

Characteristics		Unit	Description			
Series			OSP-E20BHD	OSP-E25BHD	OSP-E32BHD	OSP-E50BHD
Max. Speed		[m/s]	3[1)]	5[1)]	5[1)]	5[1)]

4		4	7	4	23	4	25	4	56	4	47	4	143	4	108
5		5	5	5	22	5	(21)	5	52	5	38	5	135	5	89

Important:
The maximum permissible torque on the drive shaft is the lowest value of the speed- or stroke-dependent torque value.

Example above:
OSP-E25BHD, stroke 5 m, required speed 3 m/s from table T2 speed 3 m/s gives 25 Nm and stroke 5 m gives 21 Nm. Max. torque for this application is 21 Nm.

Maximum Permissible Loads

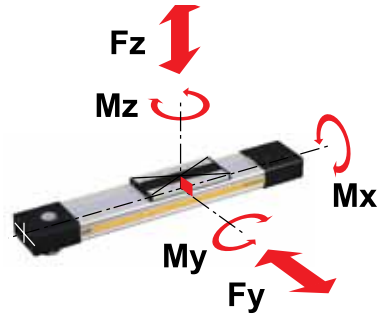
T3

Series	Max. Applied Load		Max. Moments [Nm]		
	F_y [N]	F_z [N]	M_x	M_y	M_z
OSP-E20BHD	1,600	1,600	21	150	150
OSP-E25BHD	2,000	3,000	50	500	500
OSP-E32BHD	5000	10,000	120	1,000	1,400
OSP-E50BHD	12,000	15,000	180	1,800	2,500

Loads, Forces and Moments

Combined Loads

If the actuator is subjected to several forces, loads and moments at the same time, the maximum load is calculated with the equation shown here.
The maximum permissible loads must not be exceeded.



Equation of Combined Loads

$$\frac{F_y}{F_y\,(max)} + \frac{F_z}{F_z\,(max)} + \frac{M_x}{M_x\,(max)} + \frac{M_y}{M_y\,(max)} + \frac{M_z}{M_z\,(max)} \leq 1$$

The total of the loads must not exceed >1 under any circumstances.

$M = F \cdot l$ [Nm]
$M_x = M_{x\,static} + M_{x\,dynamic}$
$M_y = M_{y\,static} + M_{y\,dynamic}$
$M_z = M_{z\,static} + M_{z\,dynamic}$

The distance (l_x, l_y, l_z) for calculation of moments relates to the centre axis of the actuator. Bending moments are calculated from the centre of the actuator and F indicates actual force.

Maximum Permissible Unsupported Length

Stroke Length

The stroke lengths of the actuators are available in multiples of 1 mm up to 5,700 mm.

Other stroke lengths are available on request. The end of stroke must not be used as a mechanical stop.
Allow an additional safety clearance at both ends equivalent to the linear movement of one revolution of the drive shaft, but at least 100 mm.

The use of an AC motor with frequency converter normally requires a larger clearance than that required for servo systems.
For advice, please contact your local Parker technical support department.

* For Bi-parting version the max. load (F) is the total load of both carriers
$F = F_{carrier\ 1} + F_{carrier\ 2}$

k = Max. permissible distance between mountings/Profile Mounting for a given load F.

When loadings are below or up to the curve in the graph below the deflection will be max. 0.01 % of distance k.

Maximum Permissible Unsupported Length – Placing of Profile Mounting

(Other dimensions for KS and KB for special drive shafts on request – see order instructions.)

Features

- Highly Compact and Rigid Solutio Fully Integrated in the Drive Cap Housing
- Purpose Designed for the BHD Series.
- Available with three Standard Ratios (3, 5 and 10)
- Very Low Backlash
- Wide Range of Available Motor Flanges

Material: Aluminium (AL-H) / Steel (St-H)

Standard Version:

- Gearbox on Opposite Side to Carrier

Note: When ordering, specify model/Type of motor and manufacturer for correct motor flange.

Please contact your local Parker technical support for available motor flange.

Series OSP-E..BHD – with Integrated Planetary Gearbox (Option)

* Version: Tandem and Bi-parting (Option)

Installation Instructions

Use the threaded holes in the end cap for mounting the actuator. Check if profile mountings are needed using the maximum allowable unsupported length graph on page 22.
At least one end cap must be secured to prevent axial sliding when profile mountings are used.

Maintenance

Depending on operating conditions, inspection of the actuator is recommended after 12 months or 3000 km operation. Please refer to the operating instructions supplied with the actuator.

First Service Start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded. Before taking the actuator as a machine into service, the user must ensure the adherence to the EC Machine Directive 2006/42/EG.

Performance Overview (T1)

Characteristics		Symbol	Description		
Series			**OSP-E25BHD**	**OSP-E32BHD**	**OSP-E50BHD**
Max. Speed		[m/s]	10	10	10
Linear Motion per Revolution Drive Shaft		[m/s]	180	240	350

9	17			9	44			9	116		
10	16			10	39			10	108		

Important:
The maximum permissible torque on the drive shaft is the lowest value of the speed- or stroke-dependent torque value.

Example above:
OSP-E25BHD, stroke 5 m, required speed 3 m/s from table T2 speed 3 m/s gives 25 Nm and stroke 5 m gives 21 Nm. Max. torque for this application is 21 Nm.

Maximum Permissible Loads (T3)

Series	Max. applied load	Max. moments [Nm]		
	F_y , F_z [N]	M_x	M_y	M_z
OSP-E25BHD	986	11	64	64
OSP-E32BHD	1,348	19	115	115
OSP-E50BHD	3,704	87	365	365

Sizing of Actuator

The following steps are recommended:

1. Determination of the lever arm length l_x, l_y and l_z from m_e to the centre axis of the actuator.
2. Calculation of the load F_x or F_y to the carrier caused by m_e
   $F = m_e \cdot g$
3. Calculation of the static and dynamic force F_A which must be transmitted by the belt.
   $F_{A(horizontal)} = F_a + F_0$
   $= m_g \cdot a + M_0 \cdot 2\pi / U_{ZR}$
   $F_{A(vertical)} = F_g + F_a + F_0$
   $= m_g \cdot g + m_g \cdot a + M_0 \cdot 2\pi / U_{ZR}$
4. Calculation of all static and dynamic bending moments M_x, M_y and M_z which occur in the application
   $M = F \cdot l$
5. Selection of maximum permissible loads via Table T3.
6. Calculation and checking of the combined load, which must not be higher than 1.
7. Checking of the maximum torque that occurs at the drive shaft in Table T2.
8. Checking of the required action force F_A with the permissible load value from Table T1.

For motor sizing, the effective torque must be determined, taking into account the cycle time.

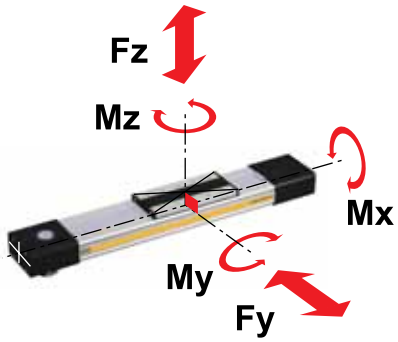
Legend

l = distance of a mass in the x-, y- and z-direction from the guide [m]
m_e = external moved mass [kg]
m_{LA} = moved mass of actuator [kg]
m_g = total moved mass ($m_e + m_{LA}$) [kg]
$F_{x/y}$ = load excerted on the carrier in dependence of the installation position [N]
F_A = action force [N]
M_0 = no-load torque [Nm]
U_{ZR} = circumference of the pulley (linear movement per revolution) [m]
g = gravity [m/s^2]
$a_{max.}$ = maximum acceleration [m/s^2]

Loads, Forces and Moments

Combined Loads

If the actuator is subjected to several forces, loads and moments at the same time, the maximum load is calculated with the equation shown here.
The maximum permissible loads must not be exceeded.



Equation of Combined Loads

$$\frac{Fy}{Fy\,(max)} + \frac{Fz}{Fz\,(max)} + \frac{Mx}{Mx\,(max)} + \frac{My}{My\,(max)} + \frac{Mz}{Mz\,(max)} \leq 1$$

The total of the loads must not exceed >1 under any circumstances.

$M = F \cdot l$ [Nm]
$M_x = M_{x\,static} + M_{x\,dynamic}$
$M_y = M_{y\,static} + M_{y\,dynamic}$
$M_z = M_{z\,static} + M_{z\,dynamic}$

The distance (l_x, l_y, l_z) for calculation of moments relates to the centre axis of the actuator. Bending moments are calculated from the centre of the actuator and F indicates actual force.

Maximum Permissible Unsupported Length

Stroke length

The stroke lengths of the actuators are available in multiples of 1 mm up to 5700 mm.

Other stroke lengths are available on request.
The end of stroke must not be used as a mechanical stop.
Allow an additional safety clearance at both ends equivalent to the linear movement of one revolution of the drive shaft, but at least 100 mm.
The use of an AC motor with frequency converter normally requires a larger clearance than that required for servo systems.

For advice, please contact your local Parker technical support department.

* For the bi-parting version the maximum load (F) complies with the total of the load at both carriers.
$F = F_{carriage\ 1} + F_{carriage\ 2}$

k = Maximum permissible distance between mountings/mid-section support for a given load F.

If the loads are below or up to the curve in the graph the deflection will be max. 0.01 % of distance k.

Maximum Permissible Unsupported Length – Placing of Profile Mounting

OSP-E.. BV Vertical Belt Actuator with Integrated Ball Bearing Guide

Content

Vertical Belt Actuator with Integrated Ball Bearing Guide in Multi-Axis Systems

The OSP-E..BV vertical belt actuator with integrated ball bearing guide has been specially developed for lifting movements in the Z-axis.
The especially low vibration OSP-E..BV vertical actuator in combination with the heavy duty series OSP-E..BHD meets the highest demands in portal and handling applications.

Advantages

- Fixed Actuator Head for Low Moving Mass
- Integrated ball bearing guide for high bending moments
- Magnetic Sensor set for contactless position sensing
- Easy to install
- Low Maintenance

Features

- High Acceleration and Speed
- Drive Shaft Versions with Clamp Shaft or Plain Shaft
- Power Transmission by Belt
- Moving Axis Profile
- Complete Motor and Control Packages

Shaft or Plain Shaft

OSP-E..BV, Vertical Belt Actuator with Integrated Ball Bearing Guide

Standard Version
OSP-E..BV

Standard actuator head with clamp shaft or plain shaft and integrated ball bearing guide with two carriers. Choice of side on which gearbox or motor is to be mounted.

Drive Shaft with Clamp Shaft

Drive Shaft with Plain Shaft

Drive Shaft with Clamp Shaft and Plain Shaft

Drive Shaft with Double Plain Shaft

Options

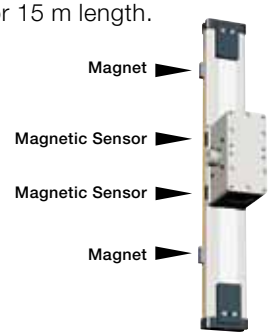
Tandem
Additional actuator head and two additional carriers for higher bending moments.

Hollow shaft with keyway
For direct connection of gearbox or motor with keyway.

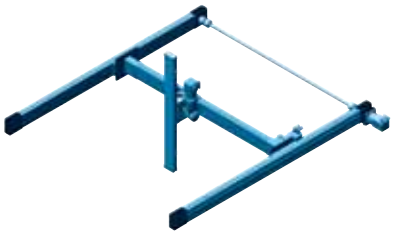
Accessories

Motor Mountings
For connection of gearbox or motor direct to drive shaft with clamp shaft, or with a motor coupling to drive shaft with plain shaft.

Magnetic Sensors Set
Magnetic Sensors with connector, mounting rail and magnets for contactless sensing of the end positions. Cable (suitable for cable chain) can be ordered separately in 5 m, 10 m or 15 m length.



Multi-Axis-Systems
For modular assembly of actuators up to multi-axis systems.



OSP-E..BV Vertical Belt Acutator with Integrated Ball Bearing Guide - Size 20, 25

Standard Version

- Vertical Belt Acutator with Integrated Ball Bearing Guide
- Drive Shaft with Clamp Shaft or Plain Shaft
- Choice of Motor Mounting Side

Options

- Tandem Version for Higher Moments
- Drive Shaft with
  - Clamp Shaft and Plain Shaft or Double Plain shaft
  - Hollow Shaft with Keyway
- Special Drive Shaft Versions on Request

OSP-E25BV	7.7	5.3	2.4	4.4	1,695	2,668	617
OSP-E20BV*	5.3	2 x 1.9	1.6	4.0	533	1,144	289
OSP-E25BV*	13	2 x 5.3	2.4	4.4	1,915	2,668	617

* Version: Tandem (Option)

Installation Instructions

Make sure that the OSP-E..BV is always operated by motor with holding brake on the actuator side. For the mounting of the external mass to be moved there are threaded holes in the end caps. Before mounting, check the correct centre of gravity distance from the table.
Mount the external mass on the belt fixed end, so that the belt tension can be checked and adjusted at the belt tensioning end without dismantling.

Maintenance

Depending on operating conditions, inspection of the actuator is recommended after 12 months or 3000 km operation. Please refer to the operating instructions supplied with the actuator.

First service start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded.
Before taking the actuator as a machine into service, the user must ensure the adherence to the EC Machine Directive 2006/42/EG.

Sizing of Actuator

The following steps are recommeded:

1. Determination of the lever arm length l_x, l_y and l_z from m_e to the centre axis of the actuator.

2. Calculation of the static and dynamic force F_A which must be transmitted by the belt.
   $F_A = F_g + F_a + F_0$
   $= m_g \cdot g + m_g \cdot a + M_0 \cdot 2\pi / U_{ZR}$

3. Calculation of all static and dynamic moments M_x, M_y and M_z which occur in the application.
   $M = F \cdot l$

4. Selection of maximum permissible loads via Table T3.

5. Calculation and checking of the combined load, which must not be higher than 1.

6. Checking of the maximum moment that occurs at the drive shaft in Table T2.

7. Checking of the required action force F_A with the permissible load value from Table T1.

For motor sizing, the effective torque must be determined, taking into account the cycle time.

Legend

l = distance of a mass in the x-, y- and z-direction from the guide [m]
m_e = external moved mass [kg]
m_{LA} = moved mass of actuator [kg]
m_g = total moved mass ($m_e + m_{LA}$) [kg]
F_A = action force [N]
M_0 = no-load torque [Nm]
U_{ZR} = circumference of the pulley (linear movement per revolution) [m]
g = gravity [m/s²]
a_{max} = maximum acceleration [m/s²]

Performance Overview

T1

Characteristics		Unit	Description	
Series			OSP-E20BV	OSP-E25BV
Max. Speed		[m/s]	3.0	5.0
Linear Motion per Revolution of Drive Shaft		[mm/U]	108	160
Max. rpm. Drive Shaft		[min^{-1}]	1700	1875
Max. Effective Action Force F_A at Speed	1m/s	[N]	650	1,430
	1 - 2 m/s	[N]	450	1,200
	>3 - 5 m/s	[N]	–	1,050
No-Load Torque [2]		[Nm]	0.6	1.2
Max. Acceleration/Deceleration		[m/s²]	20	20
Repeatability		+/- [mm/m]	0.05	0.05
Max. Standard Stroke Length [1]		[mm]	1,000	1,500
Max. Recomended Permissible Mass [3]		[kg]	10	20

[1] Longer strokes on request
[2] As a result of static friction force
[3] vertical

Max. Permissible Torque on Drive Shaft Speed / Stroke

T2

OSP-E-20BV				OSP-E-25BV			
Speed [m/s]	Torque [Nm]	Stroke [m]	Torque [Nm]	Speed [m/s]	Torque [Nm]	Stroke [m]	Torque [Nm]
1	19	1	17	1	36	1	(36)
2	17	2	11	2	30	2	36
3	16			3	(30)		
				4	28		
				5	27		

Important:
The maximum permissible torque on the drive shaft is the lowest value of the speed- or stroke-dependent torque value.

Example above:
OSP-E25BV required speed v = 3 m/s and stroke = 1 m.

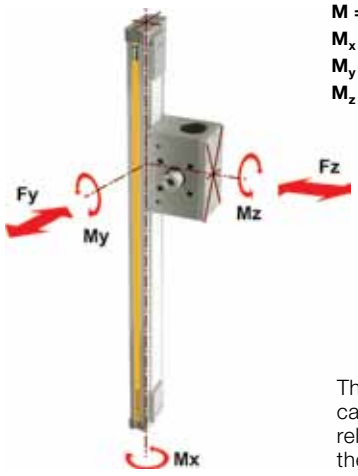
Accordingly Table T2 shows permissible moments of 30 Nm for the speed and 36 Nm for the stroke. Therefore the maximum moment at the drive shaft is determined by the speed and must not exceed 30 Nm.

Maximum Permissible Loads

T3

Series	Max. applied load		Max. moments		
	F_y [N]	F_z [N]	M_x [Nm]	M_y [Nm]	M_z [Nm]
OSP-E20BV	1600	1600	20	100	100
OSP-E25BV	2000	3000	50	200	200

Forces, Loads and Moments



$M = F \cdot l$ [Nm]

$M_x = M_{x\ statically} + M_{x\ dynamically}$

$M_y = M_{y\ statically} + M_{y\ dynamically}$

$M_z = M_{z\ statically} + M_{z\ dynamically}$

The distance (l_x, l_y, l_z) for calculation of moments relates to the centre axis of the actuator.

Combined Loads

If the actuator is subjected to several forces, loads and moments at the same time, the maximum load is calculated with the equation shown here.
The maximum permissible loads must not be exceeded.

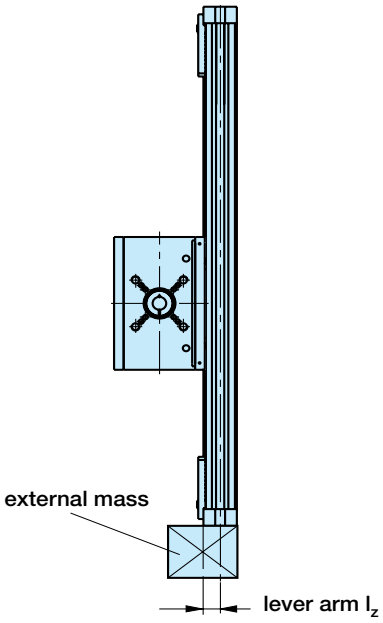
Equation of Combined Loads

$$\frac{F_y}{F_y\,(max)} + \frac{F_z}{F_z\,(max)} + \frac{M_x}{M_x\,(max)} + \frac{M_y}{M_y\,(max)} + \frac{M_z}{M_z\,(max)} \leq 1$$

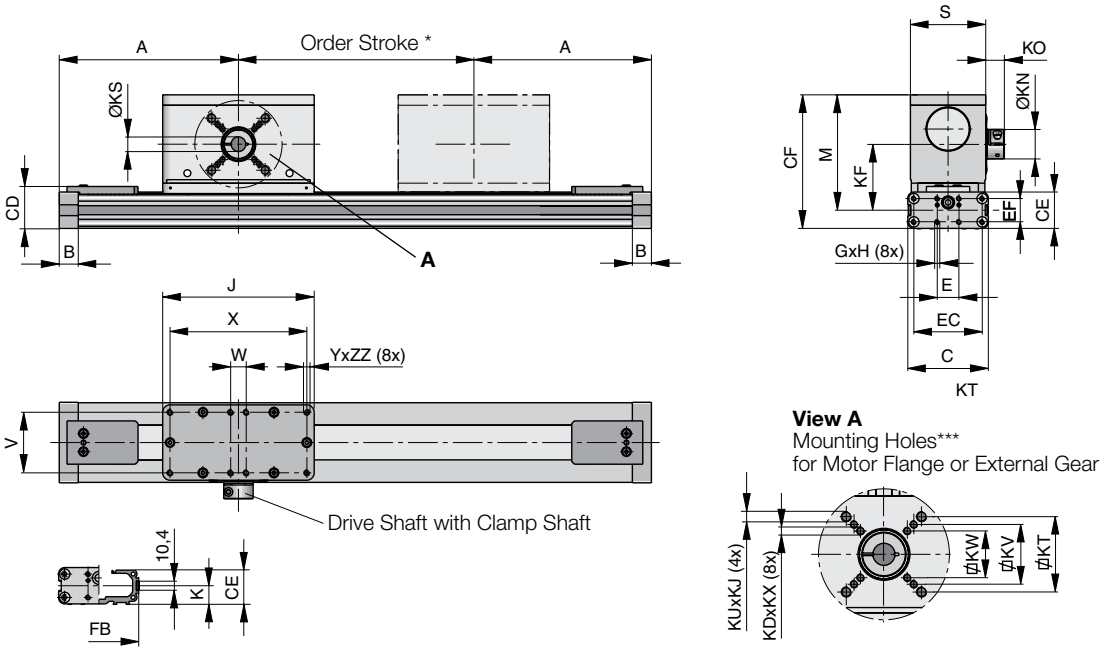
The total of the loads must not exceed >1 under any circumstances.

Distance of Centre of Gravity of External Mass from Mid-Point of Actuator

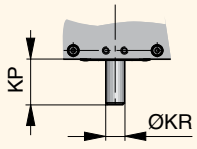
Mass [kg]	OSP-E20BV		OSP-E25BV	
	Lever arm l_z [mm]	Max. permissible acceleration/ deceleration [m/s²]	Lever arm l_z [mm]	Max. permissible acceleration/ deceleration [m/s²]
> 3 to 5	0	20	50	20
> 5 to 10	0	20	40	20
> 10 to 15	-	-	35	20
> 15 to 20	-	-	30	15



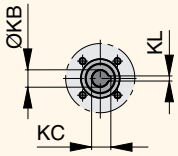
OSP-E..BV
Vertical Belt Actuator with Integrated Ball Bearing Guide – Basic Unit



Plain Shaft



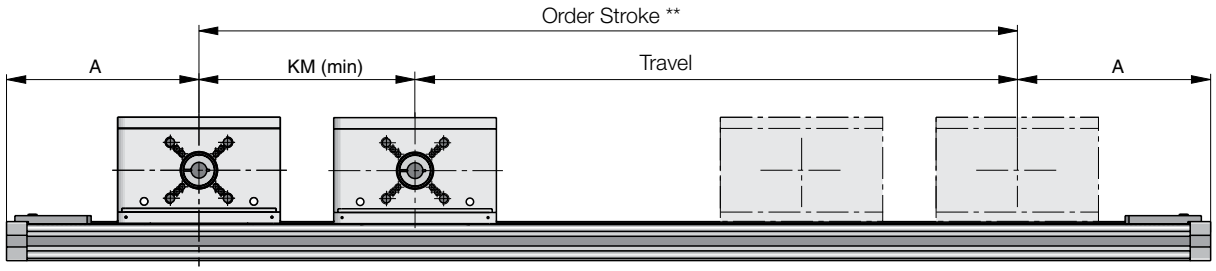
Hollow Shaft with Keyway (Option)



Series	ØKB	KC	KL	KP	ØKR
OSP-E20BV	12^{H7}	13.8	4	28.5	12_{h7}
OSP-E25BV	16^{H7}	18.3	5	31.5	16_{h7}

*** Note:** The mechanical end position must not be used as a mechancial end stop. Allow an additional safety clearance at both ends equivalent to the linear movement of one revolution of the drive shaft, but at least 100 mm. Order stroke = required travel + 2 x safety distance. The use of an AC motor with frequency converter normally requires a larger safety clearance than that required for servo systems. For further information please contact you local Parker representative.

Option – Tandem



** Order stroke = required travel + KM min + 2 x safety distance.

*** The mounting holes for the coupling housing are on the motor-mounting side. Therefore please ensure that the motor mounting side is correctly stated when ordering the actuator. (For special drive shafts, other dimensions for KS and KB are available on request – see order instructions.)

Contactless Position Sensing with Magnetic Sensors

The magnetic sensor set, comprising two magnetic sensors, a mounting rail and two magnets, is for contactless sensing of the end positions. The mounting rail and magnetic sensors are mounted on the actuator head and the magnets are mounted in the dovetail slot on the profile. The magnetic sensors are the RST-S Type (connector version). For the connecting cable Parker recommends the use of cable suitable for cable chain.

OSP-E..B
Belt Actuator with Internal Plain Bearing Guide

Content

Belt actuator with Internal Plain Bearing Guide for Point-to-Point Applications

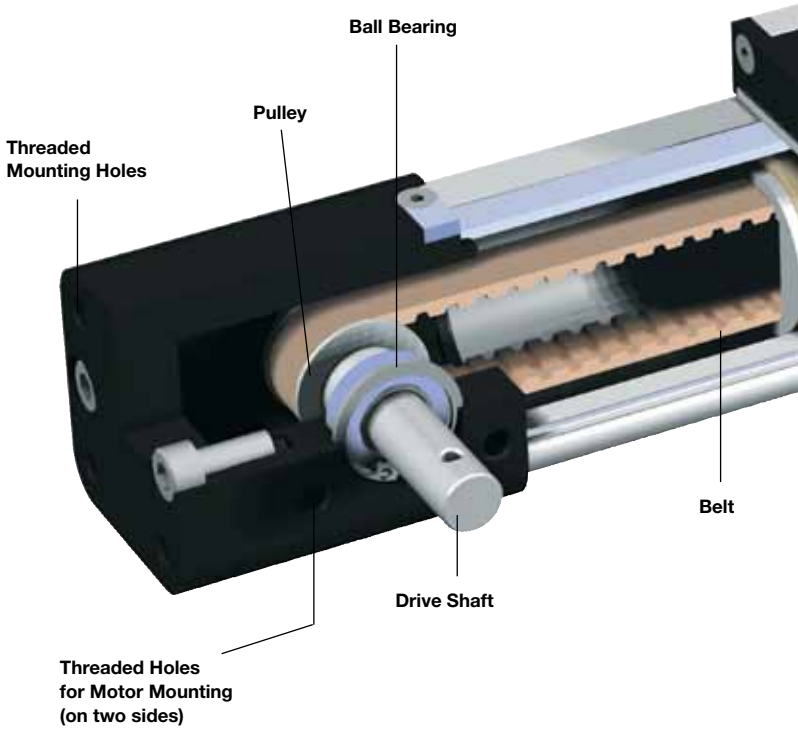
A completely new generation of actuators which can be integrated into any machine layout neatly and simply.

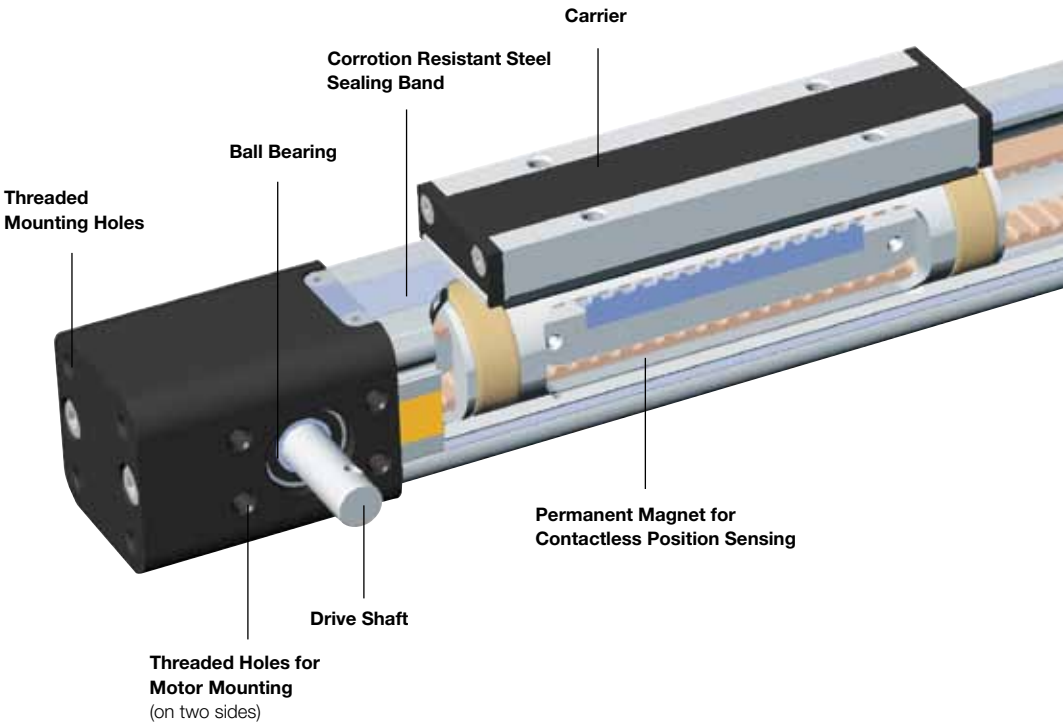
Advantages

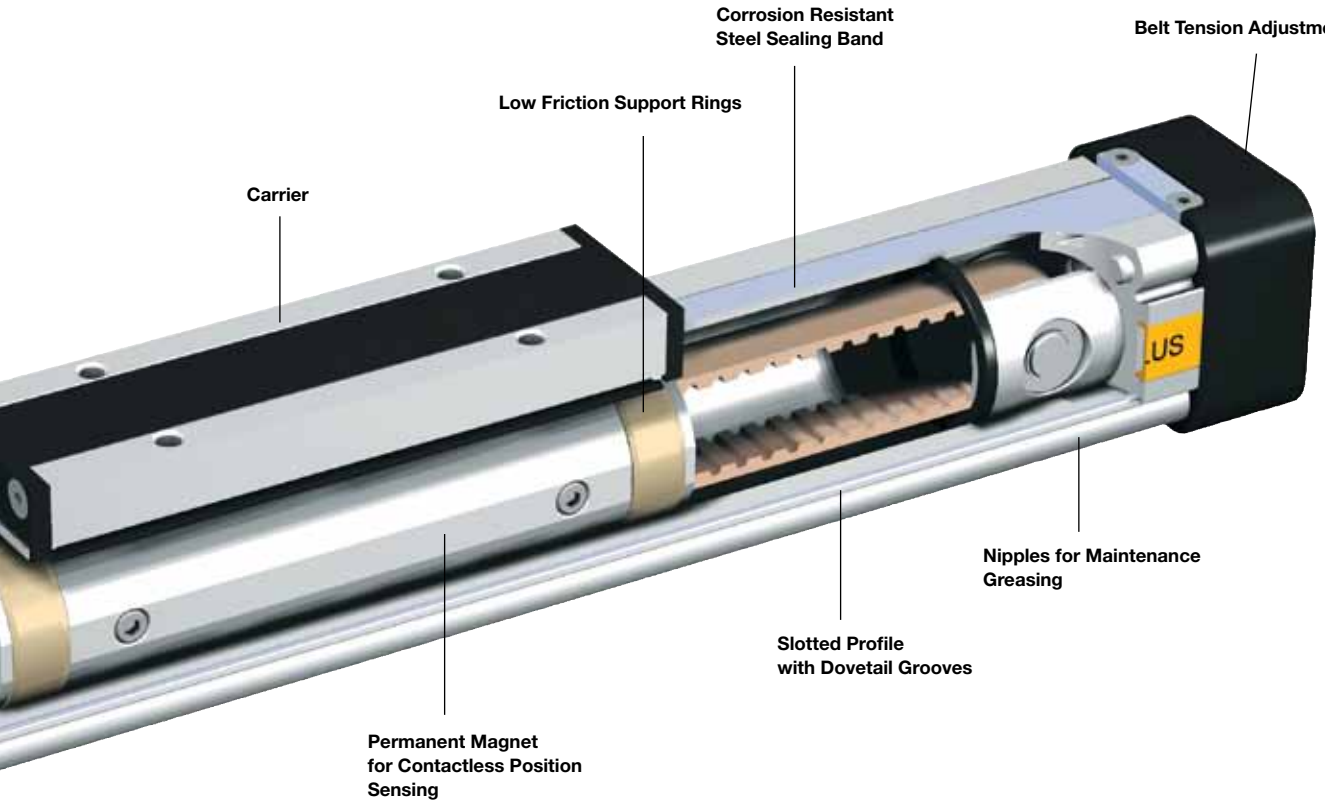
- Precise Path and Position Control
- High Speed Operation
- Easy Installation
- Low Maintenance
- Ideal for Precise Point-to-Point Applications

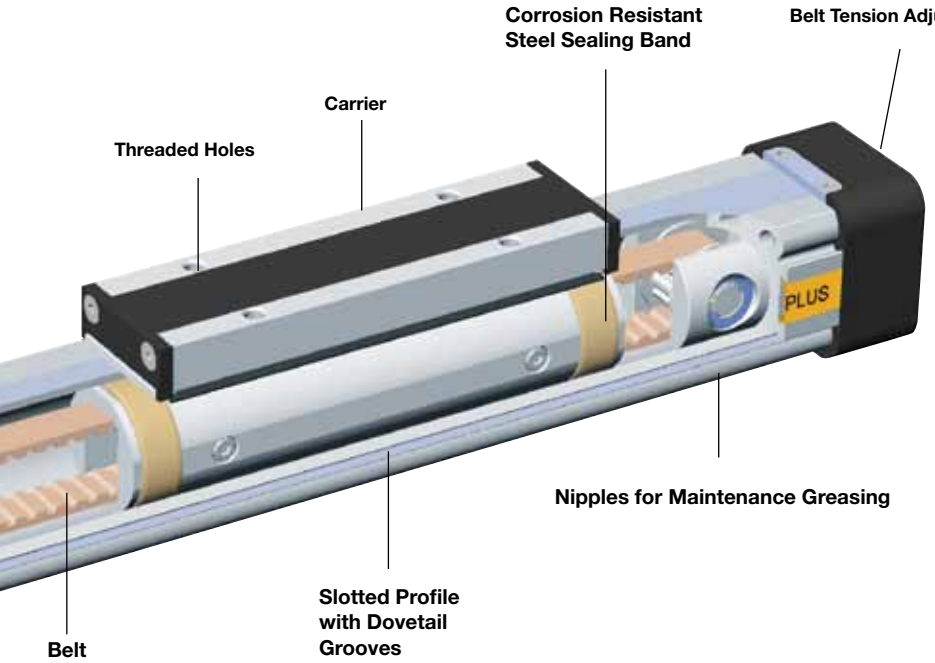
Features

- Integrated Drive and Guidance System
- Tandem Configuration with Increased Carrier Distance for Higher Moment Supports
- Long Available Strokes
- Complete Motor and Control Packages
- Diverse Range of Accessories and Mountings
- Bi-Parting and Special Options Available

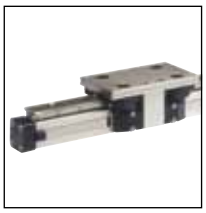








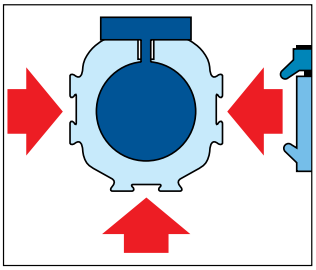
POWERSLIDE
Roller bearing precision guidance for smooth travel and high dynamic or static loads.



PROLINE
The compact aluminium roller guide for high loads and velocities.

Tandem configuration with increased carrier distance for higher moment supports.
Bi-parting version for precise synchronized movements

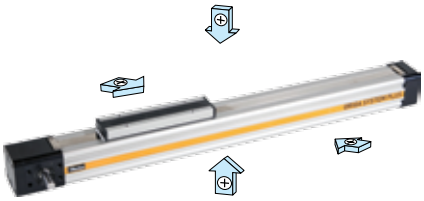
The dovetailed mounting rails of the new actuator expand its function into that of a universal system carrier.
Modular system components are simply clamped on.



OSP-E..B Belt Actuator with internal Plain Bearing Guide

STANDARD VERSIONS
OSP-E..B

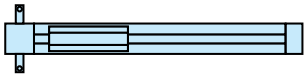
Carrier with internal guidance and magnet packet for contactless position sensing. Dovetail profile for mounting of accessories and the actuator itself.



Drive Shaft Versions
– Plain shaft or
– Double plain shaft (Option)
e.g. to drive two actuators in parallel.

Standard

Standard



Option

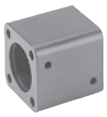
OPTIONS

Tandem
For higher moment support.

Bi-parting
For perfectly synchronised bi-parting movements.

Accessories

Motor Mounting



End Cap Mounting

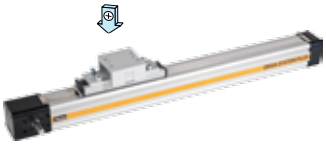
For end-mounting of the actuator.

Profile Mounting

For supporting long actuators or mounting the actuator on the dovetail grooves.

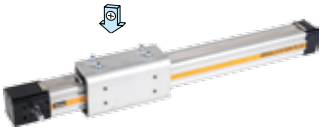
Clevis Mounting

Carrier with tolerance and parallelism compensation to drive external linear guides.



Inversion Mounting

The inversion mounting, mounted on the carrier, transfers the driving force to the opposite side, e.g. for dirty environments.



Magnetic Sensors
Series RST and EST

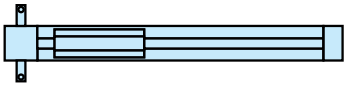
For contactless position sensing of end stop and intermediate carrier positions.

Standard Version

- Standard carrier with internal plain bearing guide
- Dovetail profile for Mounting of Accessories and the Actuator itself
- Position of Drive Shafts

Options

- Tandem-Version
- Bi-parting Version for Synchronised Movements
- Drive shaft with double plain shaft



Characteristics

		Symbol	Unit	Description
General Features

OSP-E32B	1.9	3.2	0.4	43	10
OSP-E50B	5.2	6.2	1.0	312	45
OSP-E25B*	1.2	1.6	0.5	48	6.6
OSP-E32B*	2.3	3.2	0.8	83	10
OSP-E50B*	6.3	6.2	2.1	585	45

*Version: Tandem and Bi-parting (Option)

Installation Instructions

Use the threaded holes in the end cap for mounting the actuator. See if profile mountings are needed using the maximum allowable unsupported length graph on page 45.
At least one end cap must be secured to prevent axial sliding when profile mounting is used. When the actuator is moving an externally guided load, the compensation must be used.

The actuators can be fitted with the standard carrier mounting facing in any direction. To prevent contamination such as fluid ingress, the actuator should be fitted with its sealing band facing downwards. The inversion mounting can be fitted to transfer the driving force to the opposite side.

Maintenance

All moving parts are long-term lubricated for a normal operational environment. Parker recommends a check and lubrication of the actuator, and if necessary a change of the belt and wear parts, after an operation time of 12 months of operation or 3 000 km travel of distance.
Additional greasing is easily done by using nipples in the slotted profile. Please refer to the operating instructions supplied with the actuator.

First service start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded. Before taking the actuator as a machine into service, the user must ensure the adherence to the EC Machine Directive 2006/42/EG.

Sizing of Actuator

The following steps are recommended for selection:

1. Required acceleration see table
2. Required torque is shown on page 46 and 47.
3. Check that maximum values in the table 3 are not exceeded .
4. Drive shaft by using table T2. (Pay attention to note under table) If value is lower than required, overview the moving profile or select if possible a bigger unit.
5. Before sizing and specifying the motor, the average torque must be calculated using the cycle time of the application.
6. Check that the maximum allowable unsupported length is not exceeded (see on page 45).

Performance Overview T1

Characteristics		Unit	Description		
Size			**OSP-E 25B**	**OSP-E 32B**	**OSP-E 50B**
Max. Speed		[m/s]	2	3	5

Maximum Permissible Torque on Drive Shaft Speed / Stroke T2

OSP-E-25B				OSP-E-32B				OSP-E-32B			
Speed [m/s]	Torque [Nm]	Stroke [m]	Torque [Nm]	Speed [m/s]	Torque [Nm]	Stroke [m]	Torque [Nm]	Speed [m/s]	Torque [Nm]	Stroke [m]	Torque [Nm]
1	0.9	1	0.9	1	2.3	1	2.3	1	10.0	1	10.0
2	0.9	2	0.9	2	2.0	2	(2.3)	2	9.5	2	10.0
		3	0.9	3	(1.8)	3	2.3	3	9.0	3	9.0
						4	2.3	4	8.0	4	7.0
						5	1.8	5	7.5	5	6.0

Important: The maximum permissible torque on the drive shaft is the lowest value of the speed- or stroke-dependent torque value.

Example above: OSP-E32B stroke 2 m, required speed 3 m/s; From table T2: speed 3 m/s gives 1.8 Nm and stroke 2 m gives 2.3 Nm. Max. torque for this application is 1.8 Nm.

Maximum Permissible Loads T3

Series	Max. applied load F_z [N]	Max. moments [Nm] M_x	M_y	M_z
OSP-E25B	160	2	12	8
OSP-E32B	300	8	25	16
OSP-E50B	850	16	80	32
OSP-E..B Bi-partional	The maximum load F must be equally distributed among the two carriers.			

Combined Loads

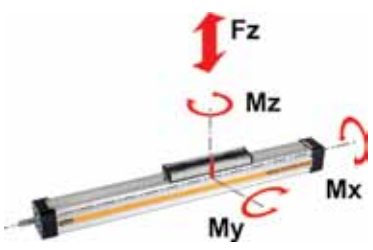
If the actuator is subjected to several forces, loads and moments at the same time, the maximum load is calculated with the equation shown here.
The maximum permissible loads must not be exceeded.

Equation of Combined Loads

$$\frac{F_y}{F_y\,(max)} + \frac{F_z}{F_z\,(max)} + \frac{M_x}{M_x\,(max)} + \frac{M_y}{M_y\,(max)} + \frac{M_z}{M_z\,(max)} \leq 1$$

The total of the loads must not exceed >1 under any circumstances.

Forces, Loads and Moments



M = F · l [Nm]
$M_x = M_{x\,statically} + M_{x\,dynamically}$
$M_y = M_{y\,statically} + M_{y\,dynamically}$
$M_z = M_{z\,statically} + M_{z\,dynamically}$

The distance l (lx, ly, lz) for calculation of moments relates to the centre axis of the actuator.

Stroke Length

The stroke lengths of the actuators are available in multiples of 1 mm up to max.

OSP-E25B: 3 m / 2 x 1.5 m *

OSP-E32B: 5 m / 2 x 2.5 m *

OSP-E50B: 5 m / 2 x 2.5 m *

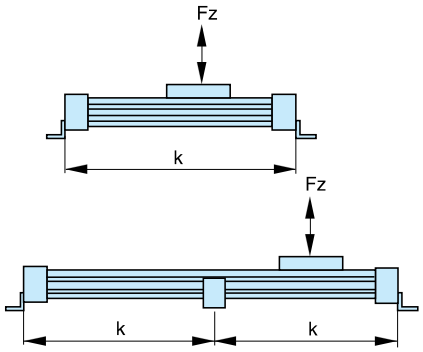
* Version: Bi-partional

Other stroke lengths are available on request.

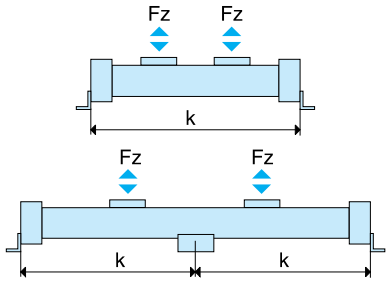
The end of stroke must not be used as a mechanical stop. Allow an additional safety clearance at both ends equivalent to the linear movement of one revolution of the drive shaft.
The use of an AC motor with frequency converter normally requires a larger safety clearance than that required for servo systems. For advise, please contact your local Parker technical support department.

Maximum Permissible Unsupported Length – Placing of Profile Mounting

Series OSP-E..B

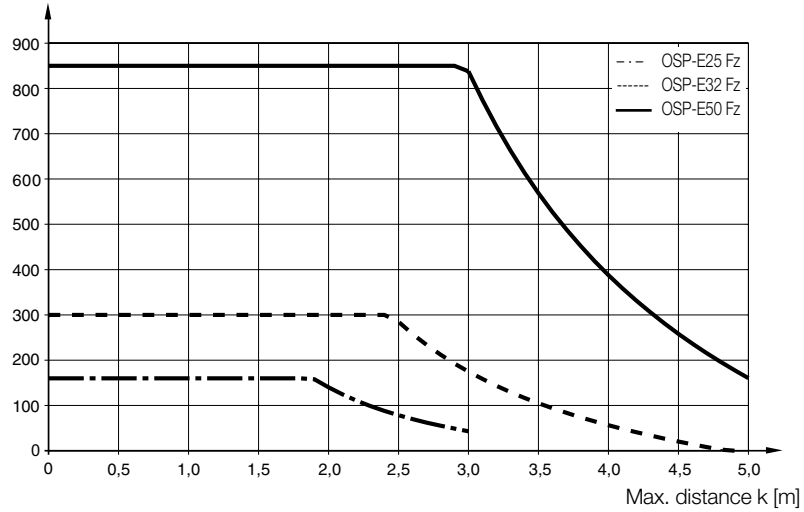


Series OSP-E..B
Bi-parting version



k = Maximum permissible distance between mountings/mid-section support for a given load F.

Load F [N]



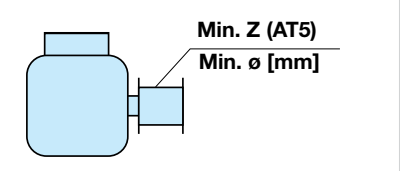
(Up to the curve in the above graph the deflection will be max. 0.2 % of distance k)

Mounting on the Drive Shaft

Do not expose the drive shaft to uncontrolled axial or radial forces when mounting coupler or pulley, a steadying block should be used.

Pulley

Minimum allowable number of teeth Z (AT5) at maximum applied torque.



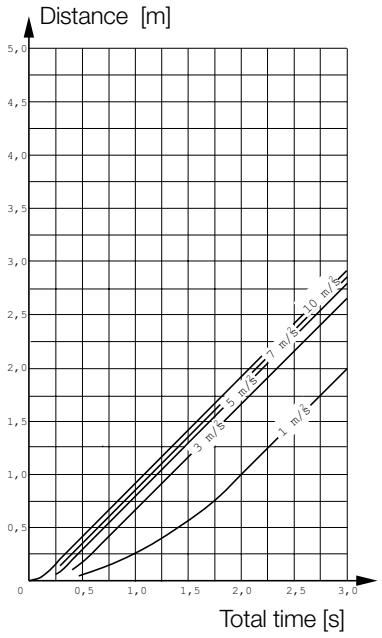
Series	Min. Z	Min Ø
OSP-E25B	24	38
OSP-E32B	24	38
OSP-E50B	36	57

Distance / Time Graph

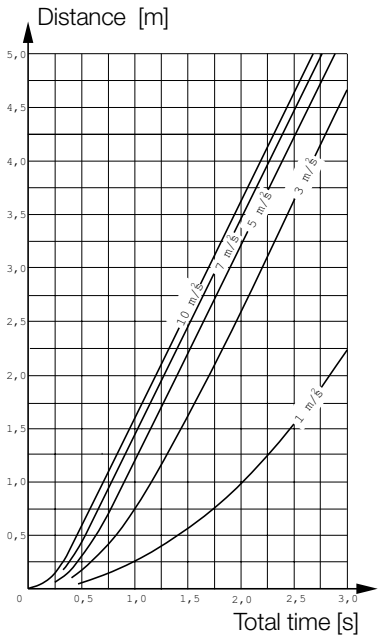
Using the required travel distance and total time, the adjacent graphs show the required acceleration based on maximum speed.

The graphs assume that acceleration and deceleration are equal. Please note that specifying non-essential high acceleration or short cycle time will result in an oversized motor.

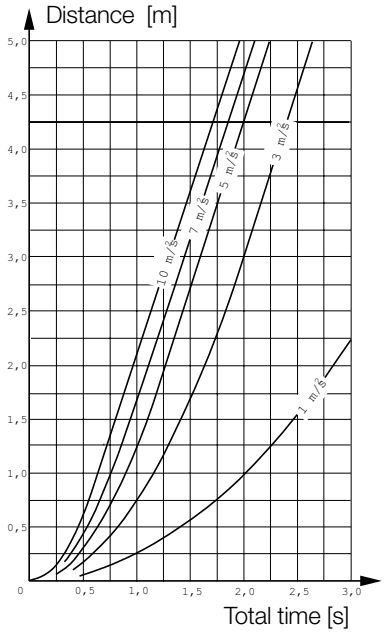
Max. Speed 1 m/s



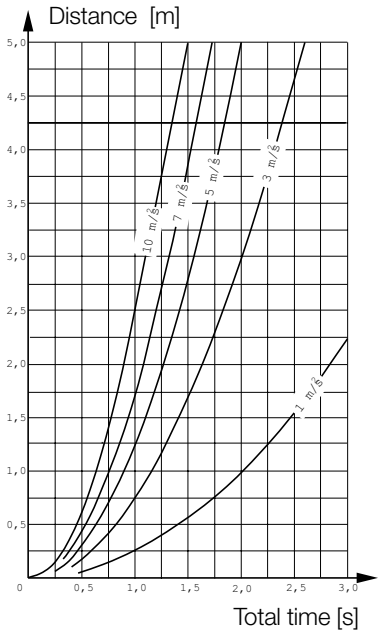
Max. Speed 2 m/s



Max. Speed 3 m/s



Max. Speed 5 m/s

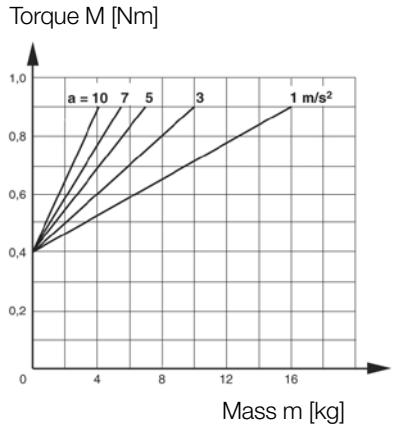


Required Torque / Mass

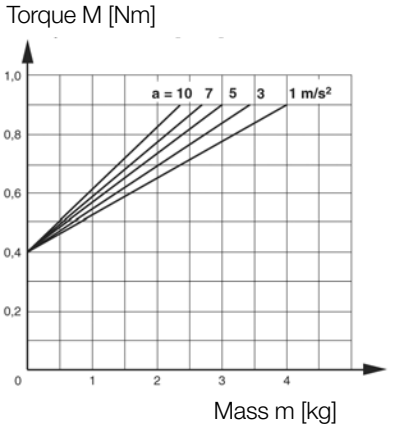
Using the known mass, the direction of the application and the required acceleration from the distance-time graphs, the actuator can be sized and the required torque is shown in the adjacent graphs.
Mass in graphs = Load + moving mass of the actuator (according to the weight chart on data sheet 43 ff).

Please note: When using an additional guide, please add the mass of the carriage to the total moving mass.

Size OSP-E25B, Horizontal Application



Size OSP-E25B, Vertical Application



Size OSP-E32B, Horizontal Application

OSP-E..SB Ball Screw Actuator with Internal Plain Bearing Guide

Content

Ball Screw Actuator with Internal Plain Bearing Guide for High Accuracy Applications

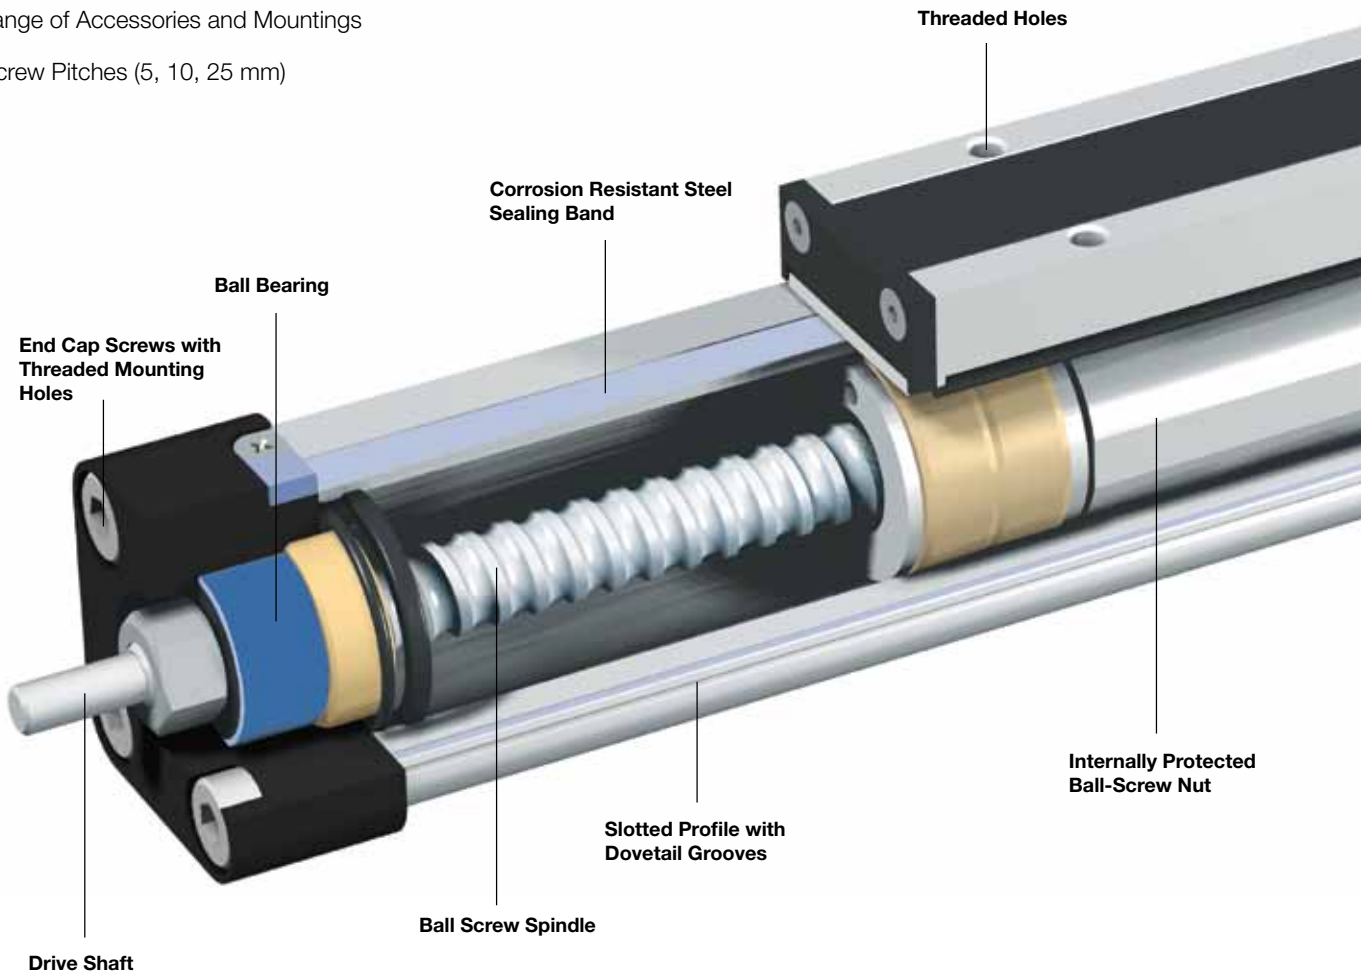
A completely new generation of actuators which can be integrated into any machine layout neatly and simply.

Advantages

- Accurate Path And Position Control
- High Force Output
- Easy Installation
- Excellent Slow Speed Characteristics
- Ideal for Precise Traverse Operations (e.g. Machine Feeds) and Lifting Applications

Features

- Integrated Drive and Guidance System
- Complete Motor and Control Packages
- Diverse Range of Accessories and Mountings
- Optimal Screw Pitches (5, 10, 25 mm)



Clean Room-Version
certified to DIN EN ISO 14644-1

SLIDELINE
Combination with linear guides provides for heavier loads.

POWERSLIDE
Roller bearing precision guidance for smooth travel and high dynamic or static loads.

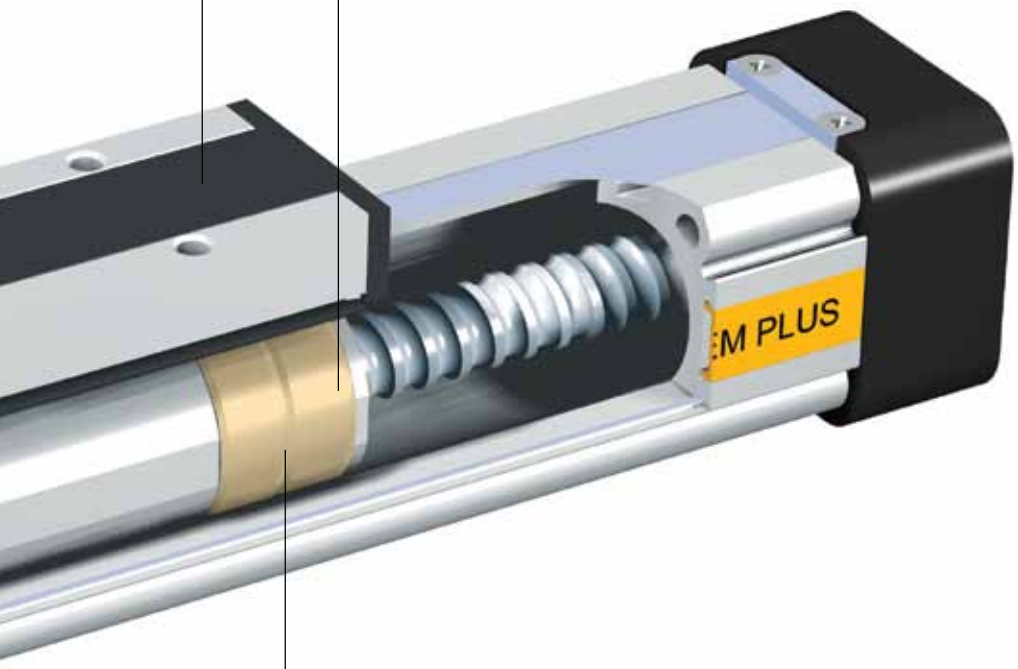
PROLINE
The compact aluminium roller guide for high loads and velocities.

Heavy Duty guide
HD linear guides for heavy duty applications

SFI-plus
displacement measuring system

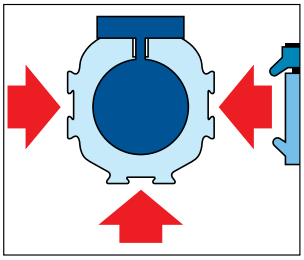
Low Friction Support Rings

Carrier



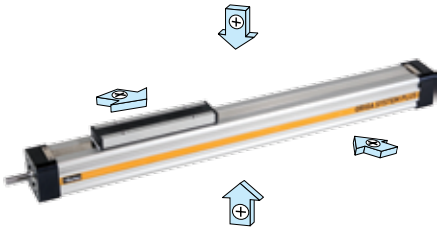
Permanent Magnet for Contactless Sensing

The dovetailed mounting rails of the new actuator expand its function into that of a universal system carrier.
Modular system components are simply clamped on.



OSP-E..SB
Ball Screw Actuator with internal Plain Bearing Guide

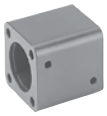
Standard Version
OSP-E..SB
Standard carrier with internal guidance and integrated magnet set for contactless position sensing.
Dovetail profile for mounting of accessories and the actuator itself.



Ball Screw Pitch
The ball screws spindles are available in various pitches:
OSP-E25SB: 5 mm
OSP-E32SB: 5, 10 mm
OSP-E50SB: 5, 10, 25 mm

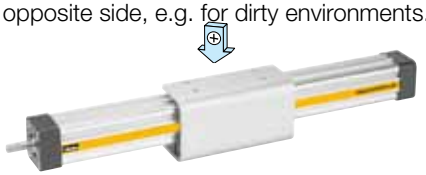
Accessories

Motor Mountings

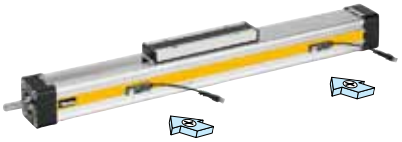


End Cap Mounting
For end-mounting of the actuator.

Inversion Mounting
The inversion mounting, mounted on the carrier, transfers the driving force to the opposite side, e.g. for dirty environments.



Magnet Sensor
For contactless position sensing of end stop and intermediate carrier positions.

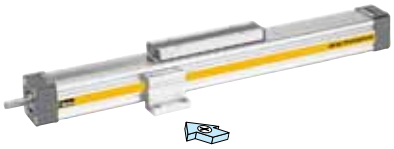


Options

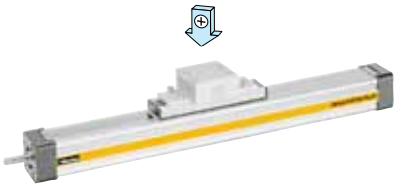
Tandem
For higher moment support.

Clean Room
certified to DIN EN ISO 14644-1

Profile Mounting
For supporting long actuators or mounting the actuator on the dovetail grooves.



Clevis Mounting
Carrier with tolerance and parallelism compensation to drive external linear guides.



Measuring System - SFI PLUS
Incremental measuring system with practically relevant resolution.

Standard Versions:

- Standard Carrier with Internal Plain Bearing Guide
- Dovetail Profile for Mounting of Accessories and the Actuator Itself
- Pitches of Ball Screw Spindle

Type OSP-E25: 5 mm
Type OSP-E32: 5 , 10 mm
Type OSP-E50: 5 , 10, 25 mm

Options:

- Tandem-Version
- Clean room-version, according to DIN EN ISO 14644-1
- Displacement Measuring System SFI-plus

*pitch

Installation Instructions

Use the threaded holes in the free end cap and a profile mounting close to the motor end for mounting the actuator.
See if profile mountings are needed using the maximum permissible unsupported length graph on page 59. At least one end cap must be secured to prevent axial sliding when Profile Mounting is used. When the actuator is moving an externally guided load, the Compensation must be used (see page 109).
The actuators can be fitted with the standard carrier mounting facing in any direction.
To prevent contamination such as fluid ingress, the actuator should be fitted with its sealing band facing downwards.
The inversion mounting can be fitted to transfer the driving force to the opposite side.

Maintenance

All moving parts are long-term lubricated for a normal operational environment. Parker recommends a check and lubrication of the actuator, and if necessary a change of wear parts, after an operation time of 12 months or 3000 km travel of distance.
Please refer to the operating instructions supplied with the actuator.

First service start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded. Before taking the actuator as a machine into service, the user must ensure the adherence to the EC Machine Directive 2006/42/EG.

Sizing of Actuator

The following steps are recommended for selection :

1. Recommended maximum acceleration is shown in graphs on page 61.

2. Required torque is shown in graphs

3. Check that maximum values in the adjacent charts are not exceeded.

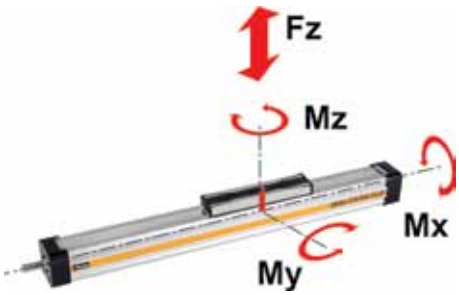
4.When sizing and specifying the motor, the RMS-average torque must be calculated using the cycle time of the application.

5. Check that the maximum allowable unsupported length is not exceeded (see on page 59 ff)

Performance Overview

Characteristics	Unit	Description					
Size		**OSP-E 25B**	**OSP-E 32B**		**OSP-E 50B**		
Pitch	[mm]	5	5	10	5	10	25
Max. speed	[m/s]	0.25	0.25	0.5	0.25	0.5	1.25
Linear motion per revolution drive shaft	[mm]	5	5	10	5	10	25
Max. rpm. drive shaft	[min^{-1}]	3000	3000		3000		
Max. effecitve action force F_A corresponding torque on drive shaft	[N] [Nm]	250 0.35	600 0.75	600 1.3	1500 1.7	3.1	7.3
No-load torque	[Nm]	0.2	0.2	0.3	0.3	0.4	0.5
Max. allowable torque on drive shaft	[Nm]	0.6	1.5	2.8	4.2	7.5	20
Repeatability	[mm]	±0.05	±0.05		±0.05		
Max. Standard stroke length	[mm]	1100	2000		3200		

Forces, Loads and Moments



M = F · l [Nm]

$M_x = M_{x\ statically} + M_{x\ dynamically}$
$M_y = M_{y\ statically} + M_{y\ dynamically}$
$M_z = M_{z\ statically} + M_{z\ dynamically}$

The distance l (lx, ly, lz) for calculation of moments relates to the centre axis of the actuator.

Maximum Permissible Loads

Series	Max. applied load [N]	Max. moments [Nm]		
	F_z, F_y	M_x	M_y	M_z
OSP-E25SB	500	2	12	8
OSP-E32SB	1200	8	25	16
OSP-E50SB	3000	16	80	32

Combined Loads

If the actuator is subjected to several forces, loads and moments at the same time, the maximum load is calculated with the equation shown here.
The maximum permissible loads must not be exceeded.

Equation of Combined Loads

$$\frac{F_y}{F_y\,(max)} + \frac{F_z}{F_z\,(max)} + \frac{M_x}{M_x\,(max)} + \frac{M_y}{M_y\,(max)} + \frac{M_z}{M_z\,(max)} \leq 1$$

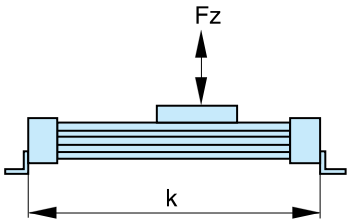
The total of the loads must not exceed >1 under any circumstances.

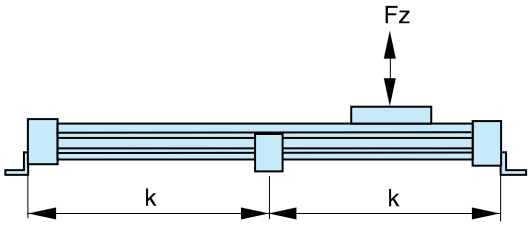
Stroke Length

The stroke lengths of the actuators are available in multiples of 1 mm up to above maximum stroke lengths.
OSP-E25SB: max. 1100 mm
OSP-E32SB: max. 2000 mm
OSP-E50SB: max. 3200 mm
Other stroke lengths are available on request.

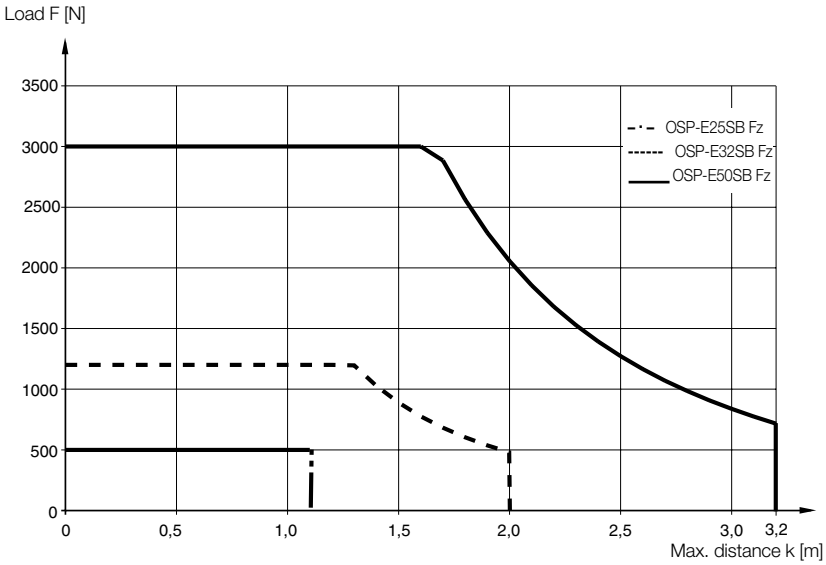
The end of stroke must not be used as a mechanical stop. Allow an additional safety clearance of minimum 25 mm at both ends.
The use of an AC motor with frequency converter normally requires a larder safety clearance than that required for servo systems. For advise, please contact your local Parker technical support department.

Maximum Permissible Unsupported Length – Placing of Profile Mounting





k = Maximum permissible distance between mountings/mid-section support for a given load F.



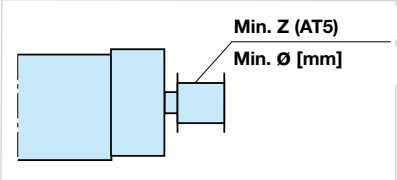
(Up to the curve in the above graph the deflection will be max. 0.2 % of distance k.)

Mounting on the Drive Shaft

Do not expose the drive shaft to uncontrolled axial or radial forces when mounting coupling or pulley, a steadying block should be used.

Pulleys

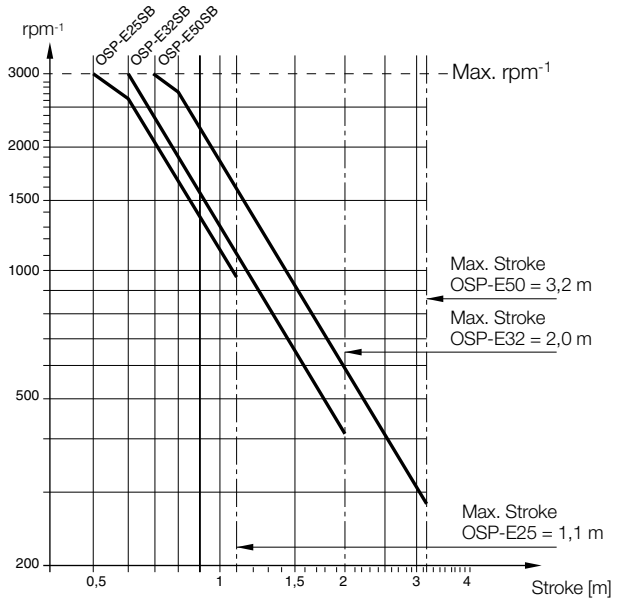
Minimum allowable number of teeth (AT5) and diameter of pulley at maximum applied torque.



Series	Min. Z	Min Ø
OSP-E25B	24	38
OSP-E32B	24	38
OSP-E50B	36	57

Maximum rpm / Stroke

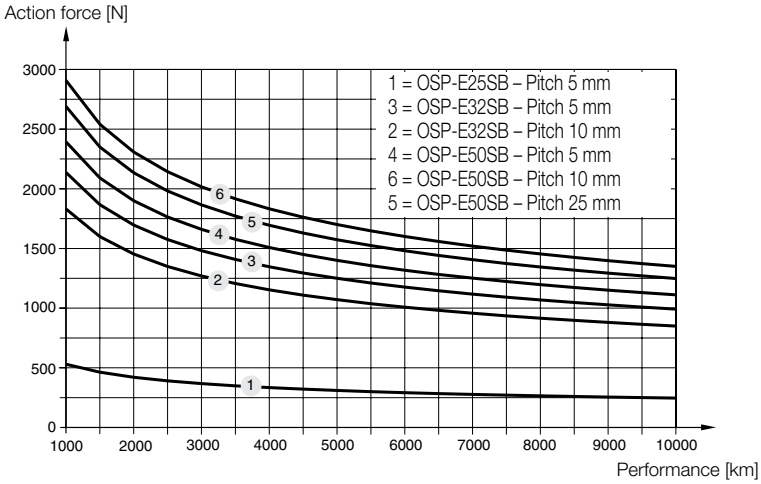
At longer strokes the speed has to be reduced according to the adjacent graphs.



The maximum rpm shown in the graph, is 80% of the critical rpm.

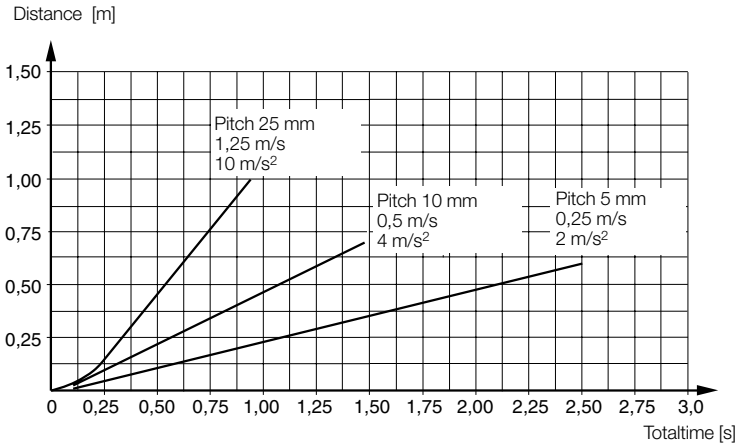
Performance / Action Force

The performance to be expected depends on the maximum required actions force of the application.
An increase of the action force will lead to a reduced performance.



Distance / Time Graph

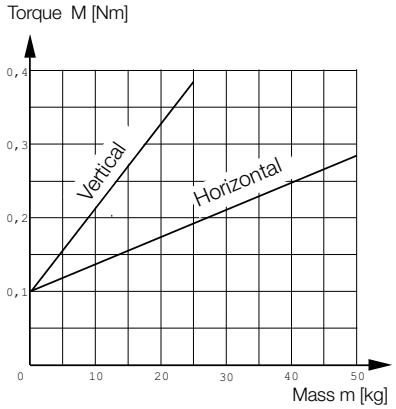
The adjacent graphs show travel distance and total time at maximum speed and recommended maximum acceleration. The graph assumes that acceleration and deceleration are equal.



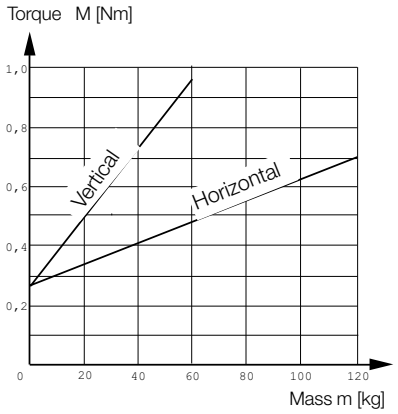
Using the known mass, the direction of the application and the recommended acceleration, the actuator can be sized and the required torque is shown in the adjacent graphs.
Mass in graphs = Load + moving mass of the actuator according to the weight chart (see table on page 61).

Please mind: If an additional guide is used, mind the weight of the guide carriage.

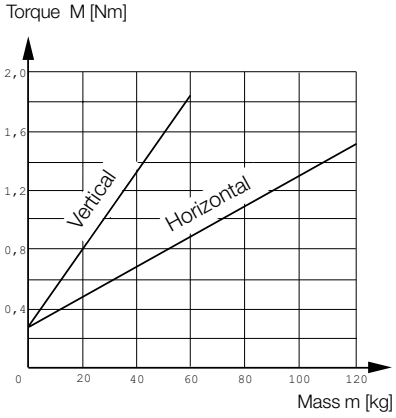
Size OSP-E25SB, Pitch 5mm
Acceleration 2 m/s²



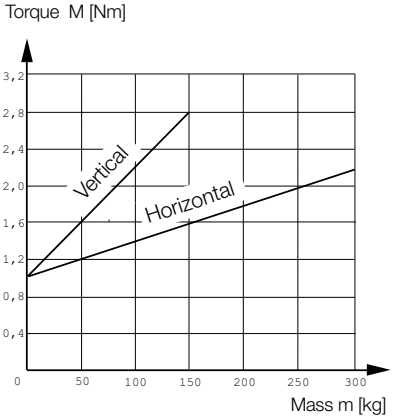
Size OSP-E32SB, Pitch 5 mm
Acceleration 2 m/s²



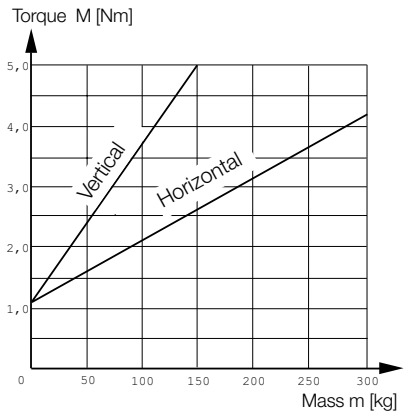
Size OSP-E32SB, Pitch 10 mm
Acceleration 4 m/s²



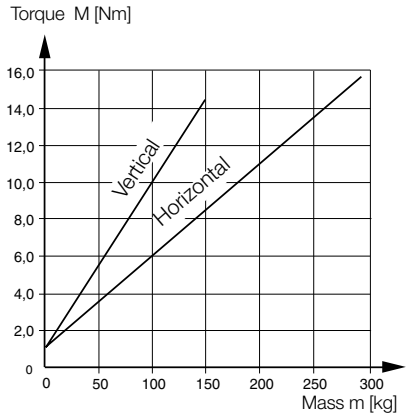
Size OSP-E50SB, Pitch 5 mm
Acceleration 2 m/s²



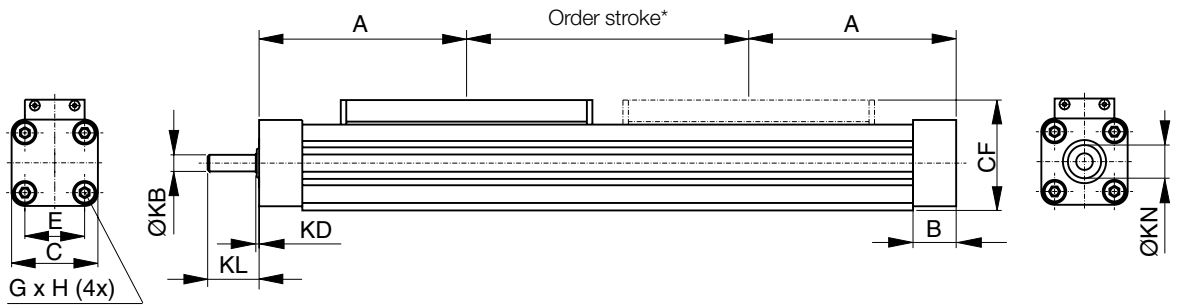
Size OSP-E50SB, Pitch 10 mm
Acceleration 4 m/s²

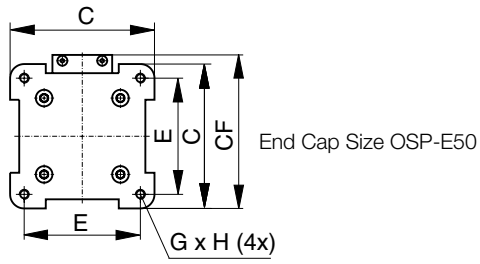


Size OSP-E50SB, Pitch 25 mm
Acceleration 10 m/s²

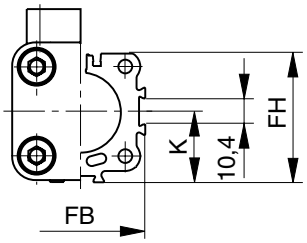


OSP-E..SB
Ball Screw Actuator with Internal Plain Bearing Guide – Basic Unit

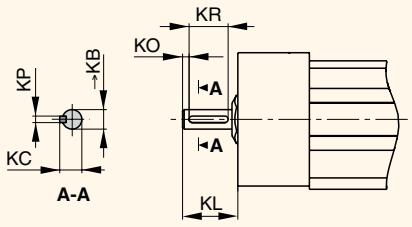




End Cap Size OSP-E50



Plain Shaft with Keyway (Option)

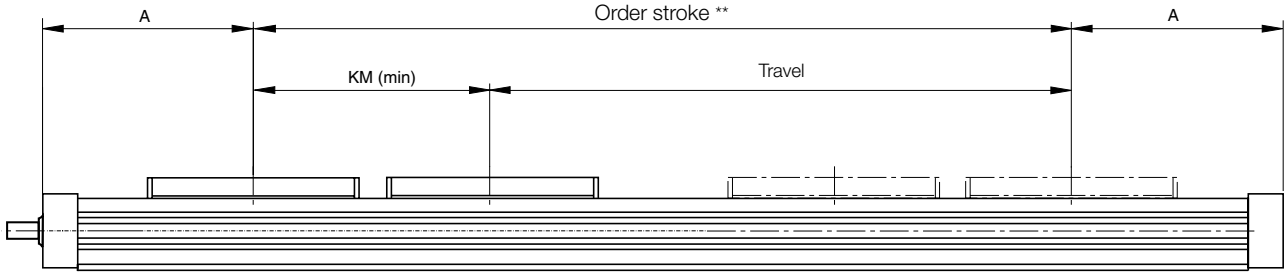


Series	ØKB$_{h7}$	KC	KL		KO	KP^{P9}	KR
			Opt. 3	Opt. 4			
OSP-E25SB	6	6.8	17	24	2	2	12
OSP-E32SB	10	11.2	31	41	5	3	16
OSP-E50SB	15	17.0	43	58	6	5	28

Option 3: Keyway
Option 4: Keyway long version

* **Note:** The mechanical end position must not be used as a mechancial end stop. Allow an additional safety clearance at both ends equivalent to the linear movement of one revolution of the drive shaft, but at least 25 mm. Order stroke = required travel + 2 x safety distance. The use of an AC motor with frequency converter normally requires a larger safety clearance than that required for servo systems. For further information, please contact your local Parker representative.

Option – Tandem



** Order stroke = required travel + KM min + 2 x safety distance

OSP-E..ST Trapezoidal Screw Actuator with Internal Plain Bearing Guide

Content

Trapezoidal Screw Actuator with Internal Plain Bearing Guide for Intermittent Applications

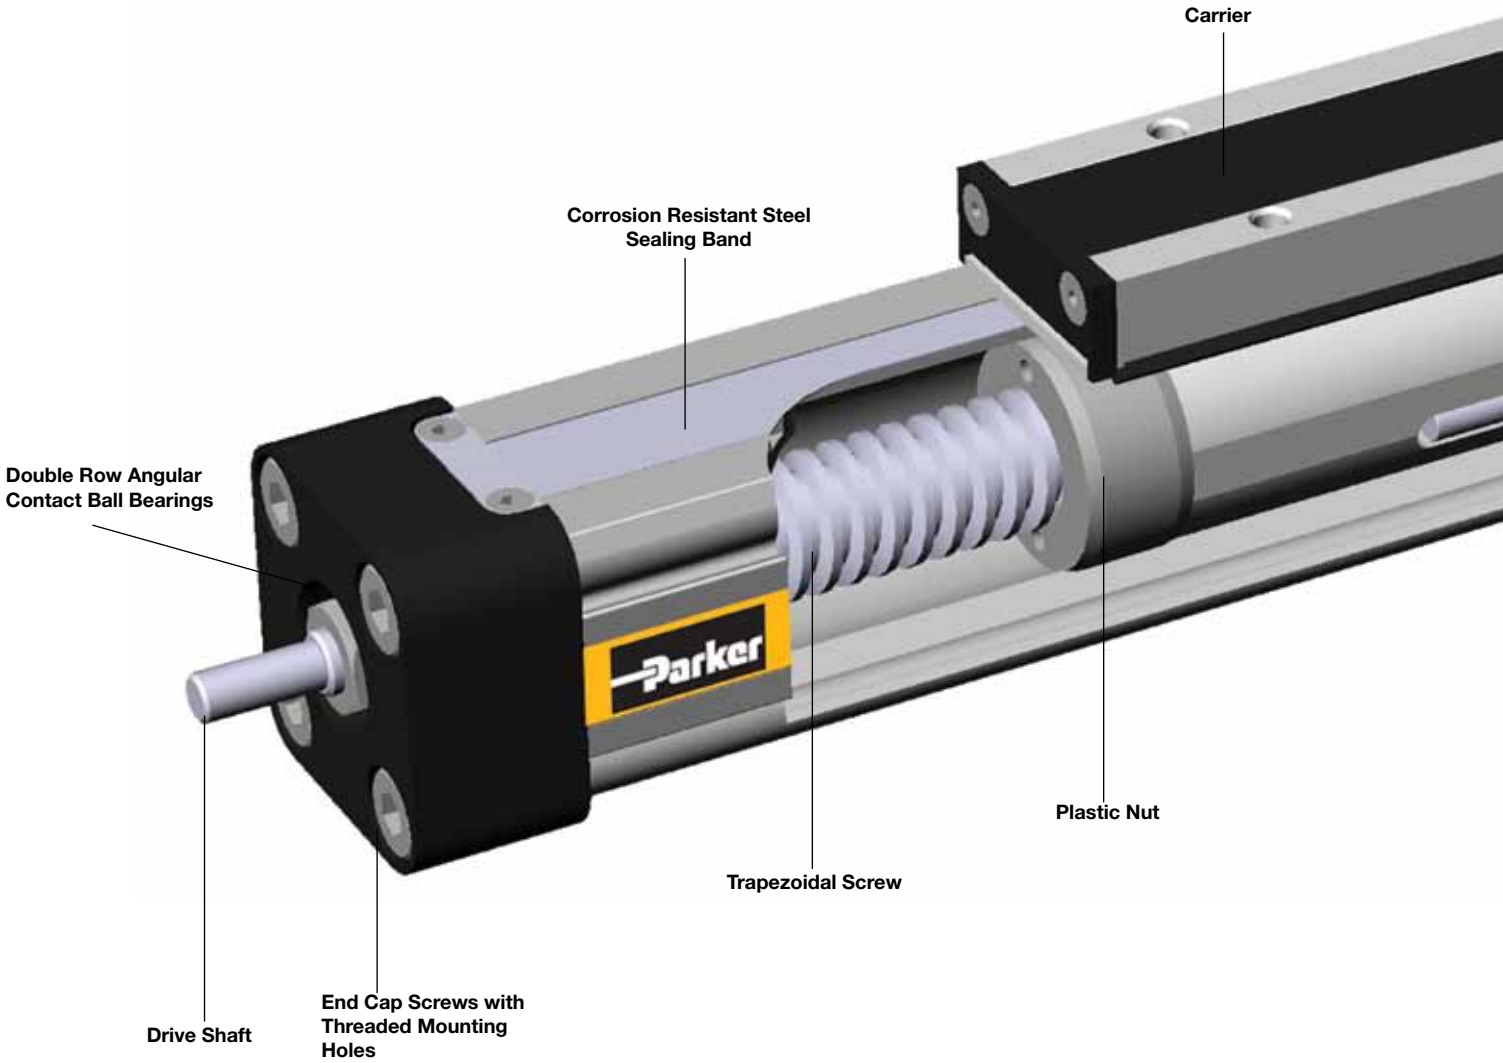
A completely new generation of actuators which can be integrated into any machine layout neatly and simply.

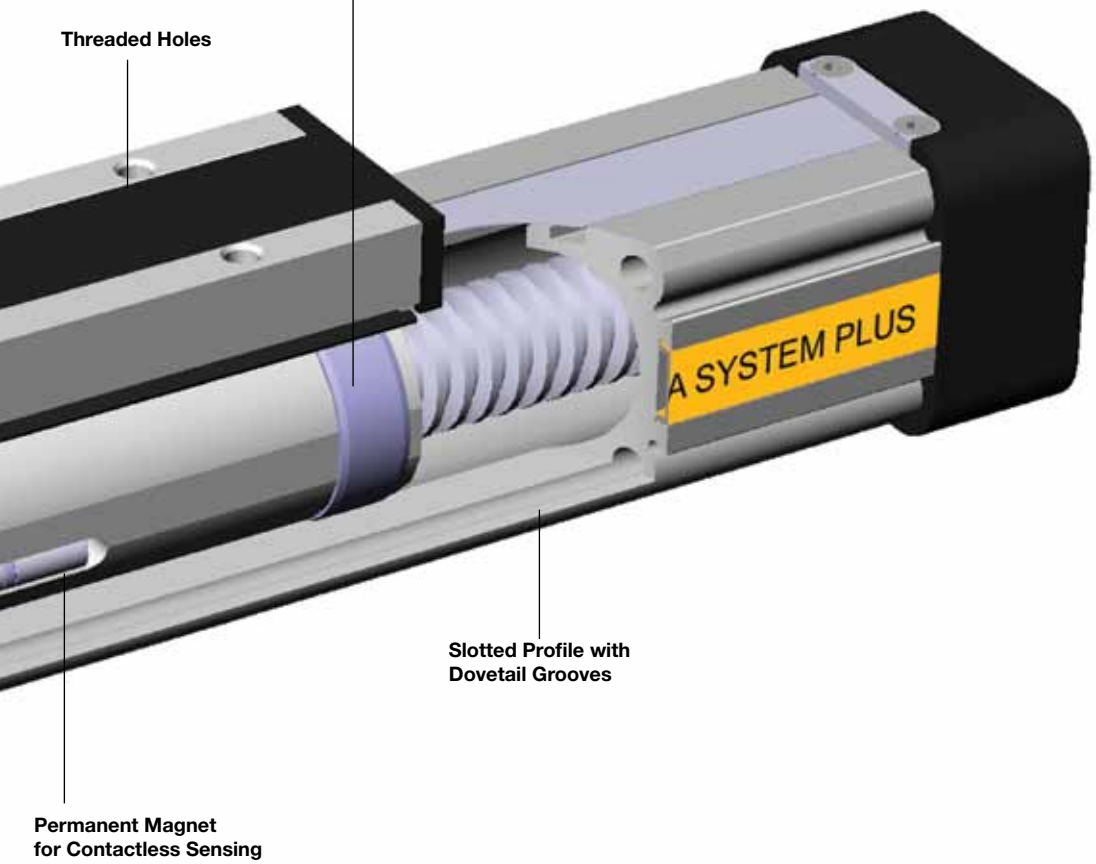
Advantages

- Accurate Path and Position Control
- High Force Output
- Self-Locking
- Excellent Slow Speed Characteristics
- Easy Installation
- Low Maintenance
- Ideal for Level Regulation, Lifting and Other Applications with Intermittent Operations

Features

- Integrated Drive and Guidance System
- Complete Motor and Control Packages
- Diverse Range of Accessories and Mountings
- Special Options Available

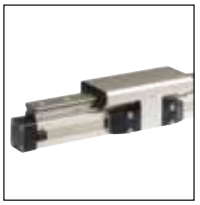




SLIDELINE
Combination with linear guides provides for heavier loads.

POWERSLIDE
Roller bearing precision guidance for smooth travel and high dynamic or static loads.

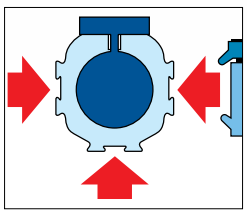
PROLINE
The compact aluminium roller guide for high loads and velocities.



Heavy Duty guide
HD linear guides for heavy duty applications

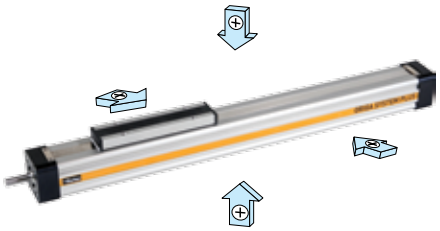
SFI-plus
displacement measuring system

The dovetailed mounting rails of the new acutator expand its function into that of a universal system carrier.
Modular system components are simply clamped on.

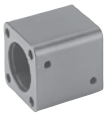


OSP-E..ST Trapezoidal Screw Actuator with Internal Plain Bearing Guide

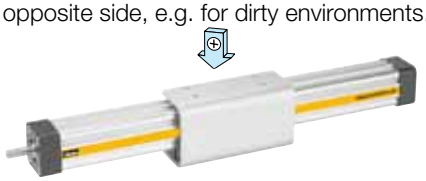
Standard Versions
OSP-E..ST
Standard carrier with internal guidance and integrated magnet set for contactless position sensing.
Dovetail profile for mounting of accessories and the actuator itself.



Accessories
Motor Mountings



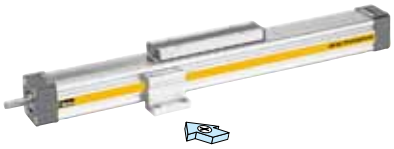
Inversion Mounting
The inversion mounting, mounted on the carrier, transfers the driving force to the opposite side, e.g. for dirty environments.



End Cap Mounting
For end-mounting of the actuator

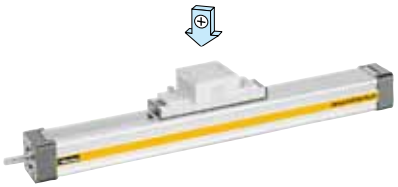
Magnetic Sensors Series RST and EST
For contactless position sensing of end stop and intermediate carrier positions.

Profile Mounting
For supporting long actuators or mounting the actuator on the dovetail grooves.



Measuring System - SFI PLUS
Incremental measuring system with practically relevant resolution.

Clevis Mounting
Carrier with tolerance and parallelism compensation to drive external linear guides.



Standard Version

- Standard Carrier with Internal Plain Bearing Guide
- Dovetail Profile for Mounting of Accessories and the Actuator itself
- Pitch of Trapezoidal Spindle:

Type OSP-E25ST : 4 mm
Type OSP-E32ST: 4 mm
Type OSP-E50ST: 6 mm

Options

- Displacement Measuring System SFI-plus
- Keyway

Characteristics

		Symbol	Unit	Description
General Features				
Series				OSP-E..ST
Name				Trapezoidal Screw Actuator with Internal Plain Bearing Guide
Mounting				see drawings
Temperature Range		ϑ_{min} ϑ_{max}	°C °C	-20 +70
Weight (mass)			kg	see table
Installation				in any position
Material	Slotted Profile			Extruded Anodized Aluminium
	Trapezoidal Screw			Cold Rolled Steel
	Drive Nut			Thermoplastic Polyester
	Guide Bearings			Low Friction Plastic
	Sealing Band			Hardened, corrosion restiant steel
	Screws, Nuts			Zinc Plated Steel
	Mountings			Zinc Plated Steel and Aluminium
Protection Class			IP	54

Weight (mass) and Inertia

Series	Weight (mass) [kg]			Inertia [x 10^{-6} kgm^2]		
	at stroke 0 m	add per metre stroke	moving mass	at stroke 0 m	add per metre	per kg mass
OSP-E25ST	0.9	2.8	0.2	6.0	30	0.4
OSP-E32ST	2.1	5.0	0.5	21.7	81	0.4
OSP-E50ST	5.1	10.6	1.3	152.0	400	0.9

Installation Instructions

Use the threaded holes in the free end cap and a profile mounting close to the motor end for mounting the actuator.
See if profile mountings are needed using the maximum permissible unsupported length graph on page 73. At least one end cap must be secured to prevent axial sliding when Profile Mounting is used. When the actuator is moving an externally guided load, the compensation must be used. The actuators can be fitted with the standard carrier mounting facing in any direction.
To prevent contamination such as fluid ingress, the drive should be fitted with its sealing band facing downwards.
The inversion mounting can be fitted to transfer the driving force to the opposite side.

Maintenance

All moving parts are long-term lubricated for a normal operational environment. Parker recommends a check and lubrication of the actuator, and if necessary a change of wear parts, after an operation time of 12 months or 300 km travel of distance. Please refer to the operating instructions supplied with the drive.

First service start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded. Before taking the actuator machine into service, the user must ensure the adherence to the EC Machine Directive 2006/42/EG.

Sizing of Actuator

The following steps are recommended for selection :

1. Check that maximum values in the table T3 are not exceeded.

2. Check the maximum values in graph on page 74 ff are not exceeded.

3. When sizing and specifying the motor, the RMS-average torque must be calculated using the cycle time of the application.

4. Check that the maximum allowable unsupported length is not exceeded (see on page 73 ff).

Performance Overview

Characteristics	Unit	Description		
Size		**OSP-E25ST**	**OSP-E32ST**	**OSP-E50ST**

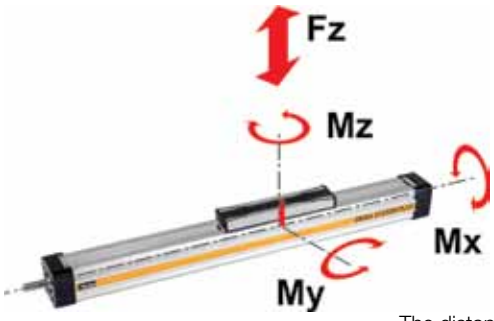
Linear Motion per Revolution Drive Shaft	[mm]	4	4	6
Max. rpm. Drive Shaft	[min^{-1}]	1,500	1,500	1,500
Max. Effective Action Force F_A Corresponding Torque on Drive Shaft	[N] [Nm]	600 1.35	1,300 3.2	2,500 8.8
No-load Torque	[Nm]	0.3	0.4	0.5
Max. Allowable Torque on Drive Shaft	[Nm]	1.55	4.0	9.4
Self-locking Force F_L 1)	[N]	600	1,300	2,500
Repeatability	[mm]	±0.05	±0.05	±0.05
Max. Standard Stroke Length	[mm]	1,100	2,000	2,500*

1) Related to screw Type s Tr 16x4. Tr 20x4. TR 30x6 see page 71 ff – for inertia.

* For strokes longer than 2,000 mm in horizontal apllications. please contact our customer support.

Forces, Loads and Moments



$M = F \cdot l$ [Nm]
$M_x = M_{x\,static} + M_{x\,dynamic}$
$M_y = M_{y\,static} + M_{y\,dynamic}$
$M_z = M_{z\,static} + M_{z\,dynamic}$

The distance l (lx, ly, lz) for calculation of the bending moments relates to the centre axis of the actuator.

Maximal Permissible Loads

T3

Size	Max. applied load [N]	Max. moments [Nm]		
	F_z, F_y	M_x	M_y	M_z
OSP-E25ST	500	2	24	7
OSP-E32ST	1000	6	65	12
OSP-E50ST	1500	13	155	26

Combined Loads

If the actuator is subjected to several forces, loads and moments at the same time, the maximum load is calculated with the equation shown here.
The maximum permissible loads must not be exceeded.

Equation of Combined Loads

$$\frac{F_y}{F_y\,(max)} + \frac{F_z}{F_z\,(max)} + \frac{M_x}{M_x\,(max)} + \frac{M_y}{M_y\,(max)} + \frac{M_z}{M_z\,(max)} \leq 1$$

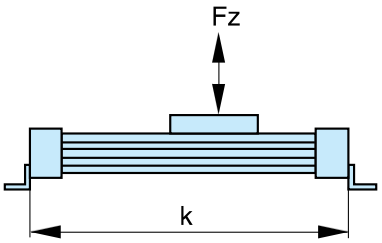
Stroke Length

The stroke lengths of the actuators are available in multiples of 1 mm up to the following maximum stroke lengths.
OSP-E25ST: max. 1100 mm
OSP-E32ST: max. 2000 mm
OSP-E50ST: max. 2500 mm *
Other stroke lengths are available on request.

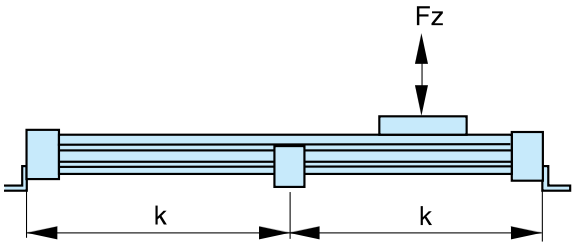
* For strokes longer than 2000 mm in horizontal applications, please contact our customer support

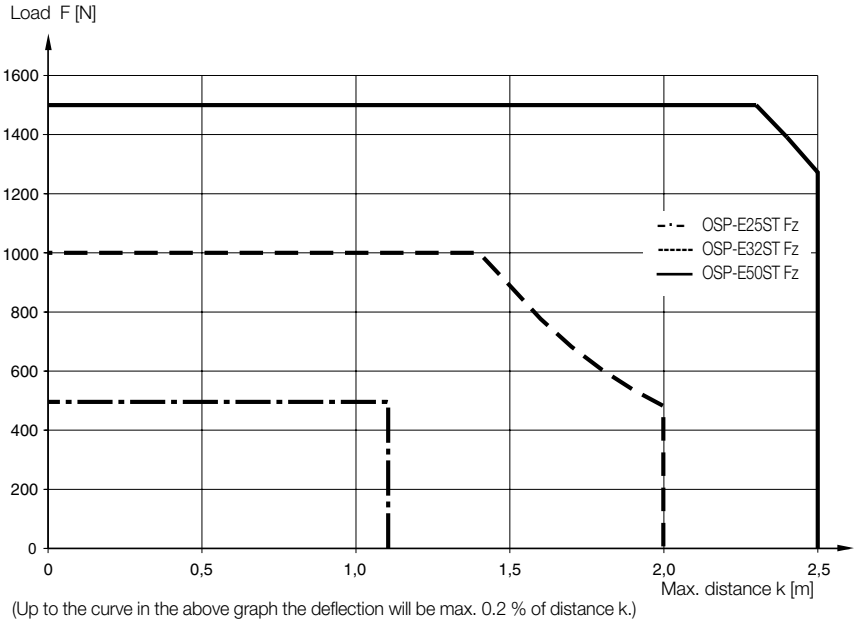
The end of stroke must not be used as a mechanical stop. Allow an additional safety clearance of minimum 25 mm at both ends. The use of an AC motor with frequency converter normally requires a larger safety clearance than that required for servo systems. For advise, please contact your local Parker technical support department.

Maximum Permissible Unsupported Length – Placing of Profile Mounting



k = Maximum permissible distance between mountings/mid-section support for a given load F.





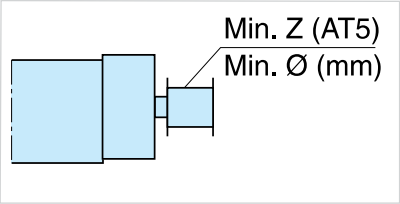
(Up to the curve in the above graph the deflection will be max. 0.2 % of distance k.)

Mounting on the Drive Shaft

Do not expose the drive shaft to uncontrolled axial or radial forces when mounting coupling or pulley, a steadying block should be used.

Pulleys

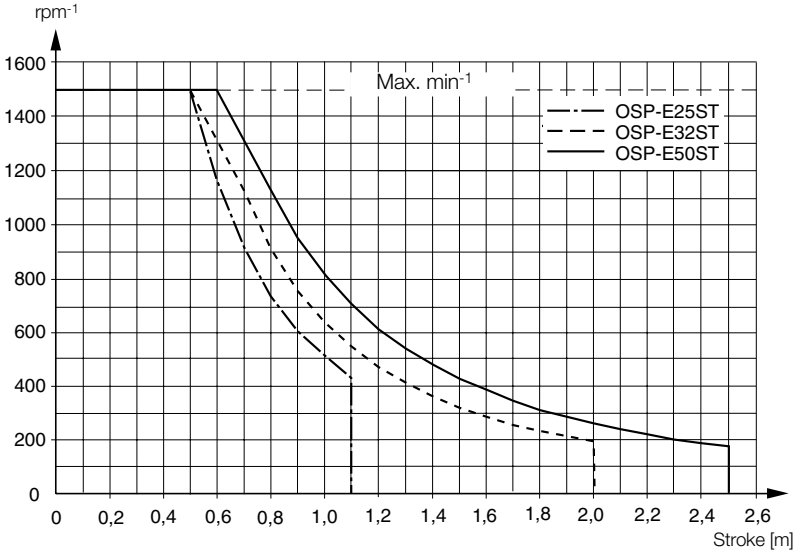
Minimum allowable number of teeth (AT5) and diameter of pulley at maximum applied torque.



Series	Min. Z	Min Ø
OSP-E25ST	24	38
OSP-E32ST	24	38
OSP-E50ST	36	57

Maximum rpm / Stroke

At longer strokes the speed has to be reduced according to the adjacent graphs.

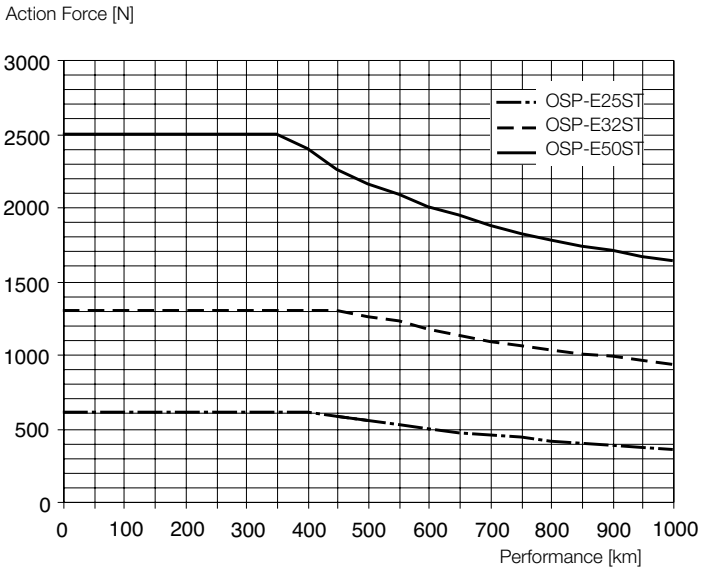


The maximum rpm shown in the graph, is 80% of the critical rpm.

Performance as a Function of the Action Force

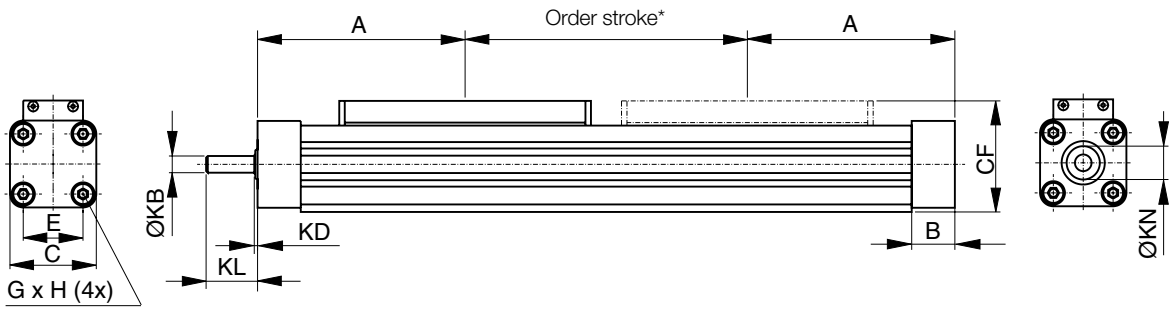
The actuators are designed for a 10% intermittent usage.

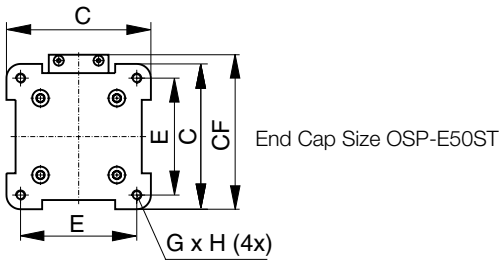
The performance to be expected depends on the maximum required actions force of the application.
An increase of the action force will lead to a reduced performance.



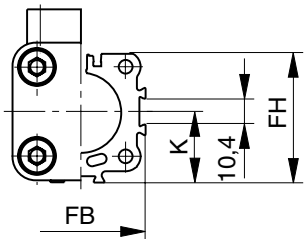
Note: Graph above is based upon 10% intermittent usage.

OSP-E..ST
Trapezoidal Screw Actuator with Internal Plain Bearing Guide - Basic Unit

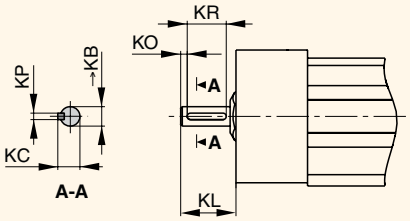




End Cap Size OSP-E50ST



Plain Shaft with Keyway (Option)



Series	ØKB$_{h7}$	KC	KL	KP	KO	KP^{P9}	KR
			Opt. 3	Opt. 4			
OSP-E20ST	6	6.8	17	24	2	2	12
OSP-E25ST	10	11.2	31	41	5	3	16
OSP-E50ST	15	17.0	43	58	6	5	28

Option 3: Keyway
Option 4: Keyway long version

*** Note:** The mechanical end position must not be used as a mechancial end stop. Allow an additional safety clearance at both ends equivalent to the linear movement of one revolution of the drive shaft, but at least 25 mm. Order stroke = required travel + 2 x safety distance.
The use of an AC motor with frequency converter normally requires a larger safety clearance than that required for servo systems.
For further information, please contact your local Parker representative.

OSP-E..SBR Ball Screw Actuator with Internal Plain Bearing Guide and Piston Rod

Contents

The right to introduce technical modifications is reserved

Ball Screw Actuator with internal Plain Bearing Guide and Piston Rod for Accurate Piston Rod Applications

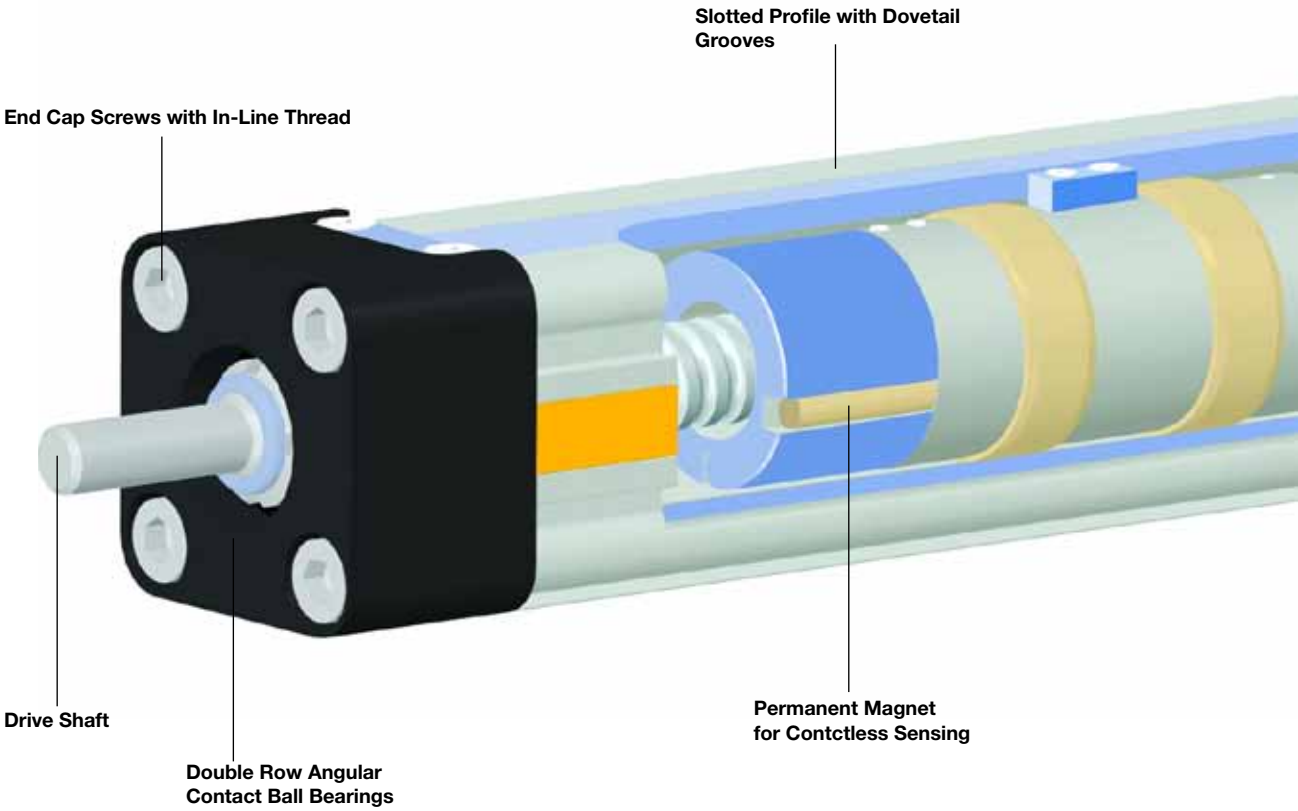
A completely new generation of actuators which can be integrated into any machine layout neatly and simply.

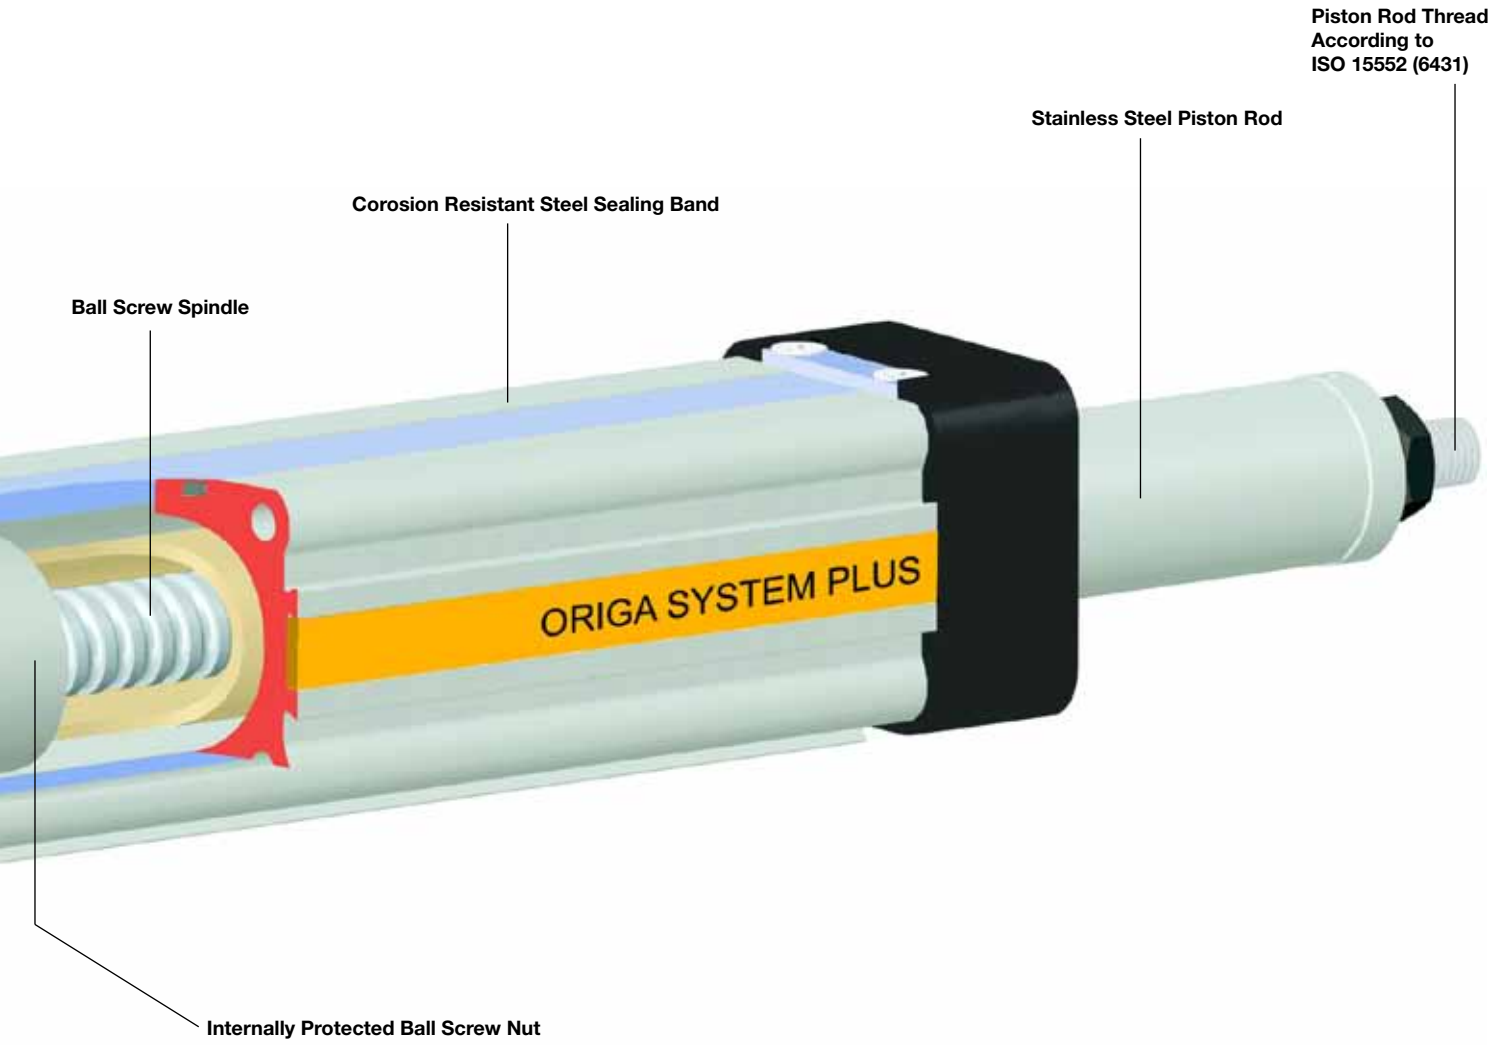
Advantages

- High Output Force
- Excellent Running Characteristics
- Accurate Path and Position Control
- High Levels of Repeatability

Features

- Extending Drive Rod
- Ball Screw Spindle
- Non-Rotating Drive Rod
- Continuous Duty Operation
- Large Range of Accessories





Piston Rod Thread
According to
ISO 15552 (6431)
Stainless Steel Piston Rod
Corosion Resistant Steel Sealing Band
Ball Screw Spindle
ORIGA SYSTEM PLUS
Internally Protected Ball Screw Nut

OSP-E..SBR
Ball Screw Actuator with Internal Plain Bearing Guide and Piston Rod

Standard Versions
OSP-E..SBR

Standard piston rod with internal guidance and integrated magnet set for contactless position sensing. Dovetail profile for mounting
of accessories and the actuator itself.

Ball Screw Pitch

The ball screws spindles are available in various pitches:
OSP-E25SBR: 5 mm
OSP-E32SBR: 5, 10 mm
OSP-E50SBR: 5, 10, 25 mm

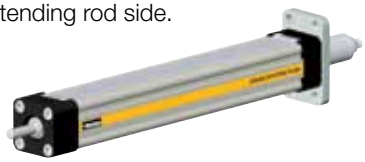
Accessories

Motor Mountings

End Cap Mounting

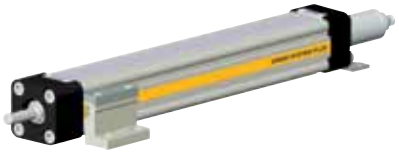
For end-mounting the actuator on the extending rod side.

Flange Mounting C
For end-mounting the actuator on the extending rod side.



Profile Mounting

For mounting the actuator on the dovetail grooves and on the motor end.



Trunning Mounting EN
in combination with pivot mounting EL.
– steplessly adjustable in axial direction.

Compensation
Piston Rod eye

Piston rod Clevis

Piston Rod Compensating Coupling

For compensating of radial and angular misaligments

Magnetic Sensors
Series RST and EST

For contactless position sensing of end stop and intermediate carrier positions.

Standard Version:

- Standard Piston Rod with Internal Plain Bearing Guide
- Pitches of Ball Screw Spindle:

Type OSP-E25SBR: 5 mm
Type OSP-E32SBR: 5, 10 mm
Type OSP-E50SBR: 5, 10, 25 mm

Option:

- Keyway Version

Weight (mass)			kg	see table
Installation				in any position
	Slotted Profile			Al Anodized
Material	Ball Screw			Steel
	Ball Nut			Steel
	Piston Rod			Stainless Steel
	Guide Bearings			Low Friction Plasitc
	Sealing Band			Hardened, Corrosion Resistant Steel
	Screws, Nuts			Zinc Plated Steel
	Mountings			Zinc Plated Steel and Aluminium
Protection Class			IP	54

Weight (mass) and Inertia

Series	Weight (mass) [kg]		Moving Mass[kg]		Inertia [x 10^{-6} kgm^2]	
	at stroke 0 m	add per metre stroke	at stroke 0 m	add per metre stroke	at stroke 0 m	add per metre stroke
OSP-E25ST	0.7	3.0	0.2	0.9	1.2	11.3
OSP-E32ST	1.7	5.6	0.6	1.8	5.9	32.0
OSP-E50ST	4.5	10.8	1.1	2.6	50.0	225.0

Installation Instructions

Use the threaded holes in the free end cap and a profile mounting close to the motor end for mounting the actuator.
The piston rod is locked against rotations, but must not be used for radial loads Mx, that need to be guided externally. A compensation part e. g. piston rod eye (see order instructions page 86) is recommended.

Maintenance

All moving parts are long-term lubricated for a normal operational environment. Parker recommends a check and lubrication of the actuator, and if necessary a change of wear parts, after an operation time of 12 months or 3000 km travel of distance. Please refer to the operating instructions supplied with the actuator.

First service start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded. Before taking the actuator as a machine into service, the user must ensure the adherence to the EC Machine Directive 2006/42/EG.

Performance Overview

Characteristics	Unit	Description					
Series		**OSP-E25SBR**	**OSP-E32SBR**		**OSP-E50SBR**		
Pitch	[mm]	5	5	10	5	10	25
Max. Speed	[m/s]	0.25	0.25	0.5	0.25	0.5	1.25

Max. Effective Action Force F_A Corresponding Torque Drive Shaft	[N] [Nm]	260 0.45	900 1.1	1.8	1200 1.3	2.8	6.0
No-load Torque	[Nm]	0.2	0.2	0.3	0.3	0.4	0.5
Max. Allowable Torque on Drive Shaft	[Nm]	0.6	1.5	2.8	4.2	7.5	20
Max. Allowable Acceleration	[m/s^2]	5	5		5		
Typical Repeatability	[mm]	±0.05	±0.05		±0.05		
Max. Standard Stroke	[mm]	500	500		500		

Sizing of Actuator

The following steps are recommended for selection :

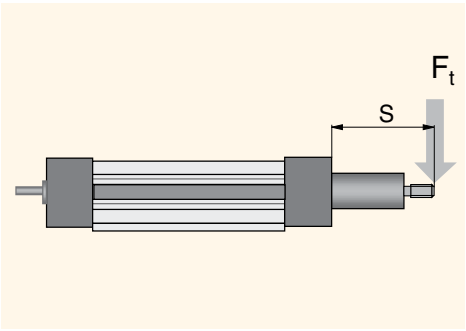
1. Check that the maximum values in the adjacent chart and transverse force/stroke graph below are not exceeded.

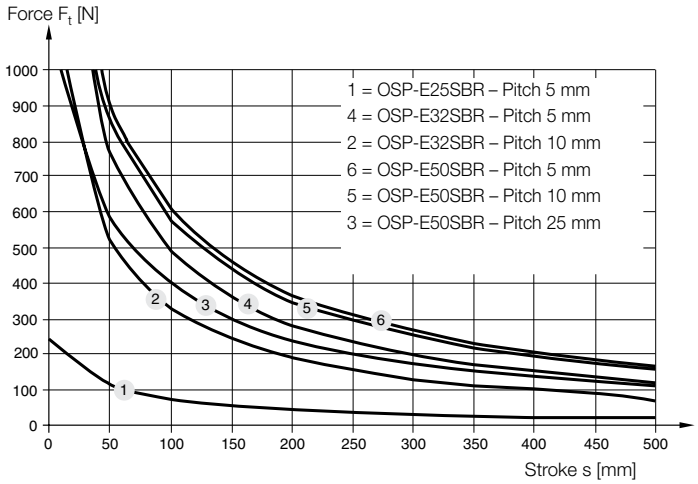
2. Check the lifetime/travel distance in graph below.

3. When sizing and specifying the motor, the RMS-average torque must be calculated using the cycle time in applicationg.

Transverse Force / Stroke

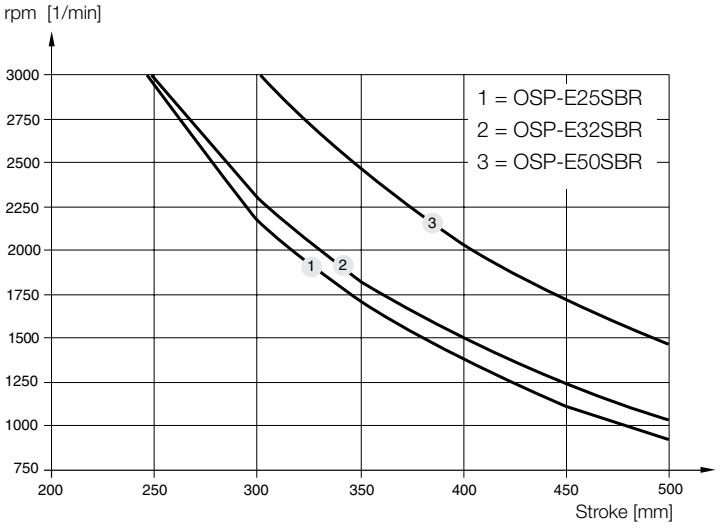
The permissible transverse force is reduced with increasing stroke length according to the adjacent graphs.





Maximum rpm / Stroke

At longer stokes the speed has to be reduced according to the adjacent graphs.



Performance as a Function of the Action Force

The performance to be expected depends on the maximum required actions force of the application.

An increase of the action force will lead to a reduced performance.

Trapezoidal Screw Actuator with Internal Plain Bearing Guide and Piston Rod for Intermittent Applications

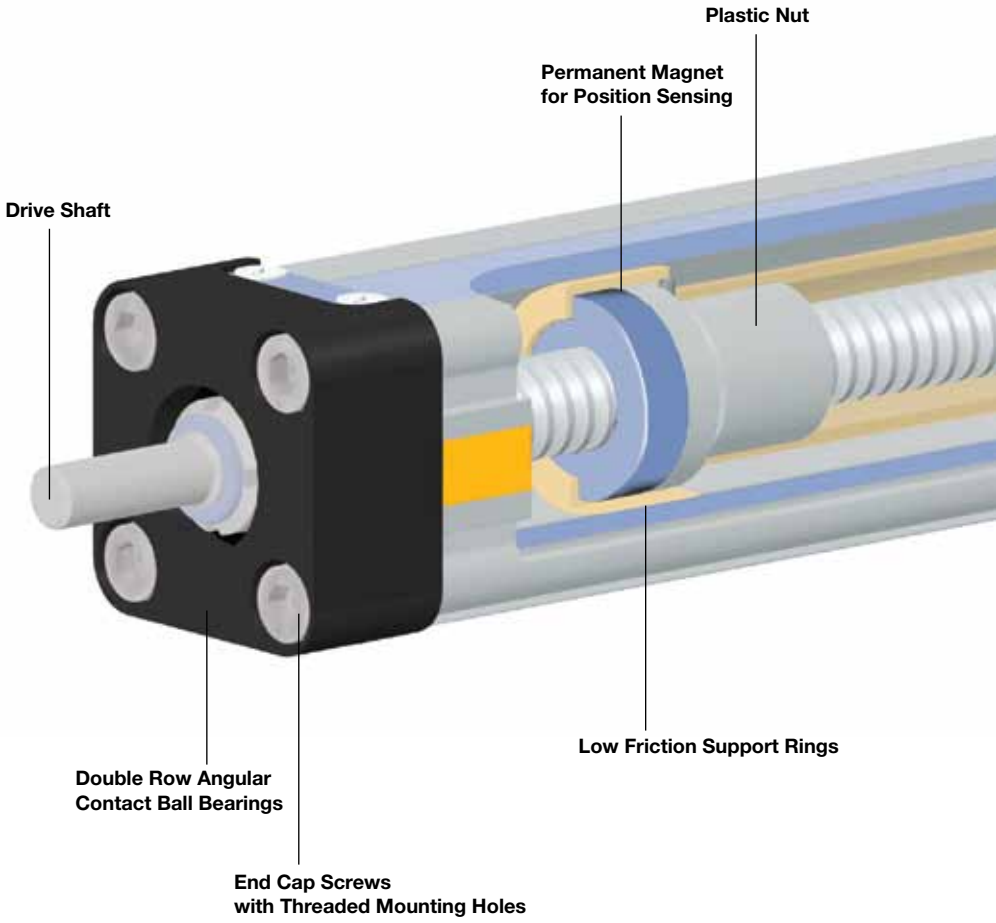
A completely new generation of actuators which can be integrated into any machine layout neatly and simply.

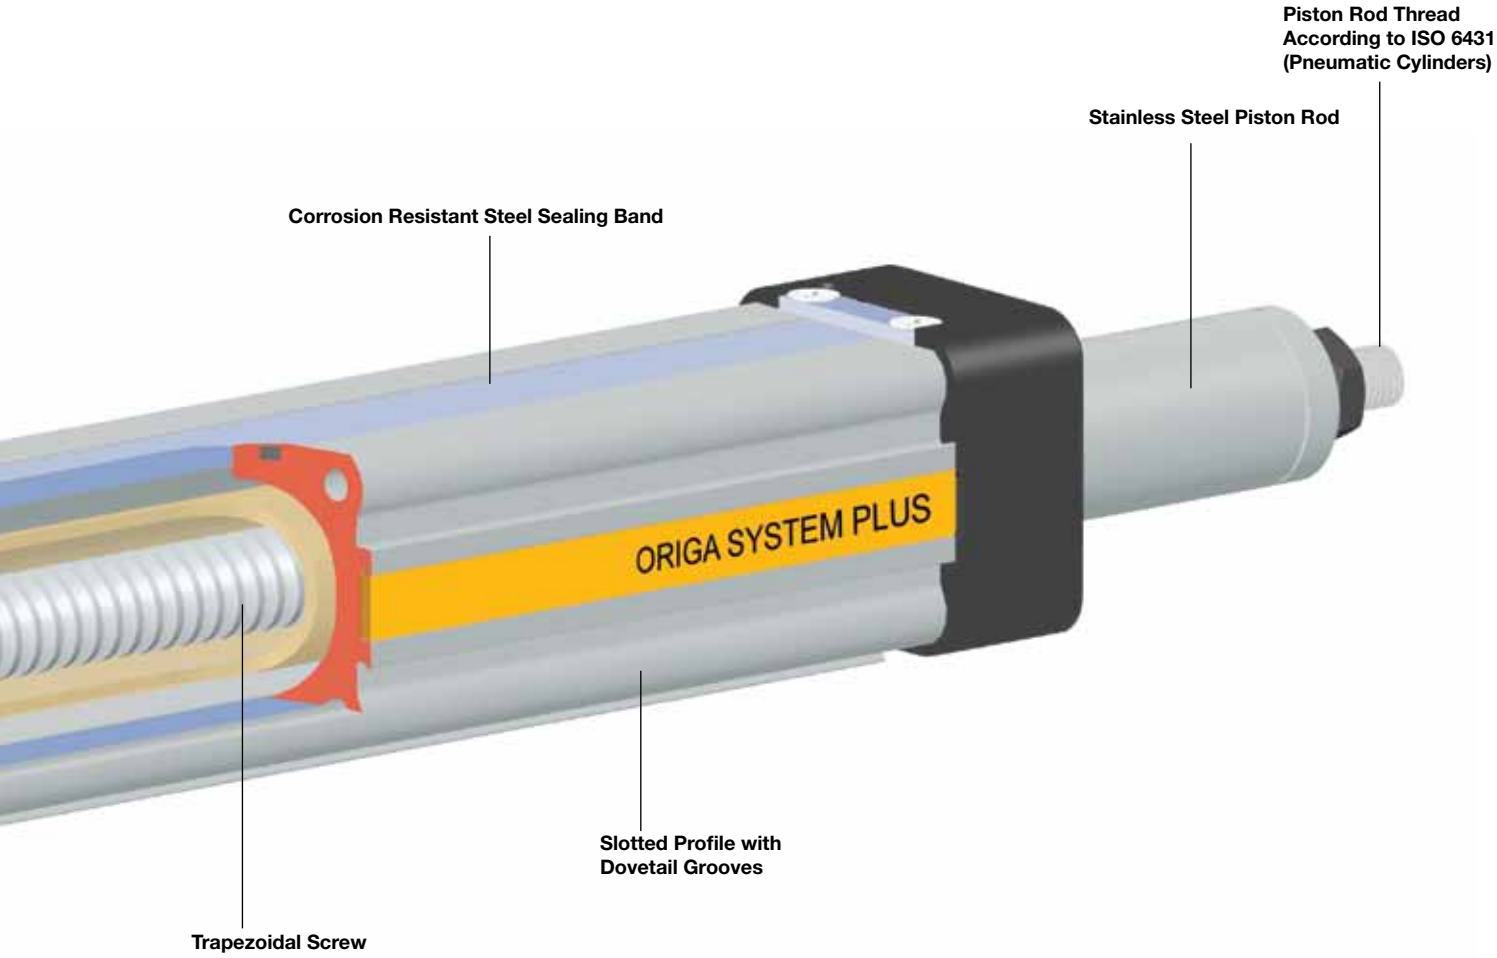
Advantages

- Accurate Path and Position Control
- High Force Output
- Self-Locking
- Excellent Slow Speed Characteristics
- Easy Installation
- Low Maintenance
- Ideal for Level Regulation, Lifting and Other Applications with Intermittent Operations

Features

- Piston Rod-End Dimensions Conforming to ISO Pneumatic Standards
- Complete Motor and Control Packages
- Diverse Range of Accessories and Mountings
- Special Options Available





Piston Rod Thread
According to ISO 6431
(Pneumatic Cylinders)
Stainless Steel Piston Rod
Corrosion Resistant Steel Sealing Band
ORIGA SYSTEM PLUS
Slotted Profile with
Dovetail Grooves
Trapezoidal Screw

OSP-E..STR
Trapezoidal Screw Actuator with Internal Plain Bearing Guide and Piston Rod

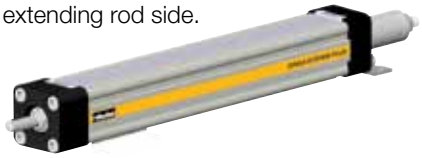
Standard Versions
OSP-E..STR

Standard piston rod with internal guidance and integrated magnet set for contactless position sensing. Dovetail profile for mounting of accessories and the actuator itself.

Accessories

Motor Mountings

End Cap Mounting
For end-mounting the actuator on the extending rod side.



Flange Mounting C
For end-mounting the actuator on the extending rod side.

Profile Mounting

For mounting the actuator on the dovetail grooves and on the motor end.

Trunning Mounting EN
in combination with pivot mounting EL.
– steplessly adjustable in axial direction.

Compensation Piston Rod Eye

Piston Rod Clevis

Piston Rod Compensating Coupling
For compensating of radial and angular misaligments

Magnetic Sensors Series RST and EST

For contactless position sensing of end stop and intermediate carrier positions.

Standard Version

- Dovetail Profile for Mounting of Accessoires and the Acutator Itself
- Pitch of Trapezoidal Spindle

Type OSP-E25STR : 3 mm
Type OSP-E32STR: 4 mm
Type OSP-E50STR: 5 mm

Characteristics

		Symbol	Unit	Description
General Features

Weight (Masse) and Inertia

Series	Weight (mass) [kg]		Moving Mass[kg]		Inerita [x 10^{-6} kgm^2]	
	At stroke 0 m	Add per metre stroke	At stroke 0 m	Add per metre stroke	At stroke 0 m	Add per metre stroke
OSP-E25STR	0.4	2.9	0.1	0.7	1.1	10.3
OSP-E32STR	0.9	5.4	0.2	1.2	3.9	29.6
OSP-E50STR	2.4	10.6	0.8	1.6	24.6	150

Installation Instructions

Use the threaded holes in the free end cap and a profile mounting close to the motor end for mounting the actuator.
The piston rod is not locked against rotation and needs to be guided externally. A compensation part e. g. piston rod eye (see order instructions page 96) is recommended.

Maintenance

All moving parts are long-term lubricated for a normal operational environment. Parker Origa recommends a check and lubrication of the actuator, and if necessary a change of wear parts, after an operation time of 12 months or 300 km travel of distance.
Please refer to the operating instructions supplied with the actuator.

First service start-up

The maximum values specified in the technical data sheet for the different products must not be exceeded. Before taking the actuator as a machine into service, the user must ensure the adherence to the EC Machine Directive 2006/42/EG.

Contactless position sensing

Please use the magnetic sensor mentioned below:

KL3096 (Type RS-K, normaly closed, Reed-contact, with cable)
KL3098 (Type ES-S, Magnetic electronic, PNP-sensor with DIN-plug)

Max. Standard Stroke Length	[mm]	500	500	500

[1)] Related to screw Type s Tr 12x3, Tr 16x4, Tr 24x5 see page 93 – for inertia
[2)] from 0.4 m stroke max. 1200 min -1 permissible

Sizing of Actuator

The following steps are recommended for selection :

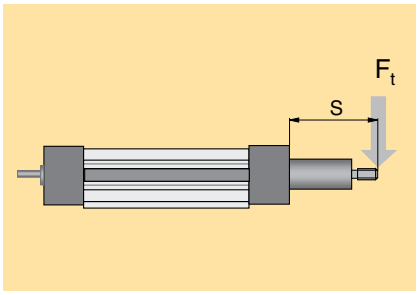
1. Check that the maximum values in the adjacent chart and transverse force/stroke graph below are not exceeded.

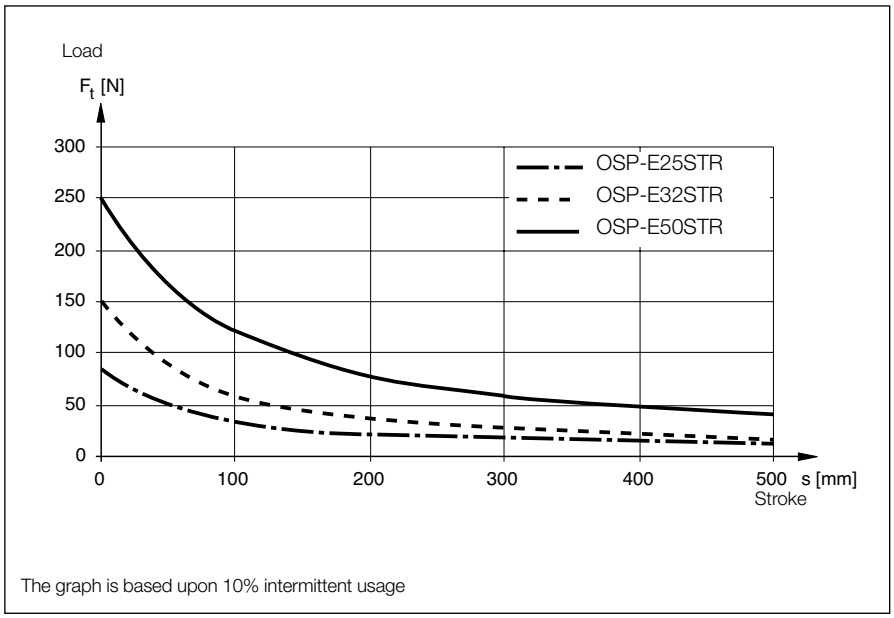
2. Check the lifetime/travel distance in graph below.

3. When sizing and specifying the motor, the RMS-average torque must be calculated using the cycle time in application

Transverse Force / Stroke

The permissible transverse force is reduced with increasing stroke length according to the adjacent graphs.



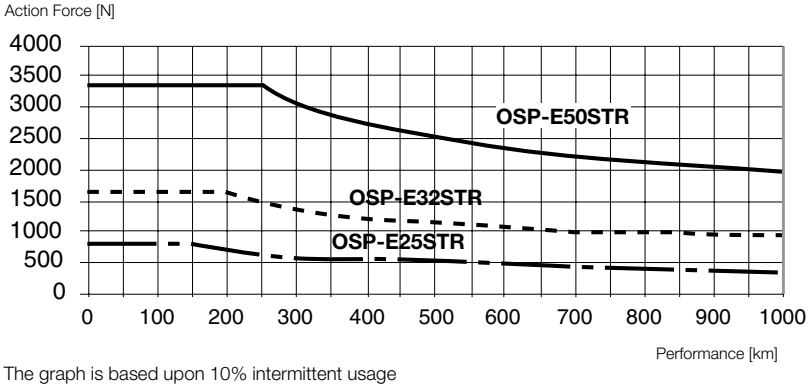


The graph is based upon 10% intermittent usage

Performance / Action Force

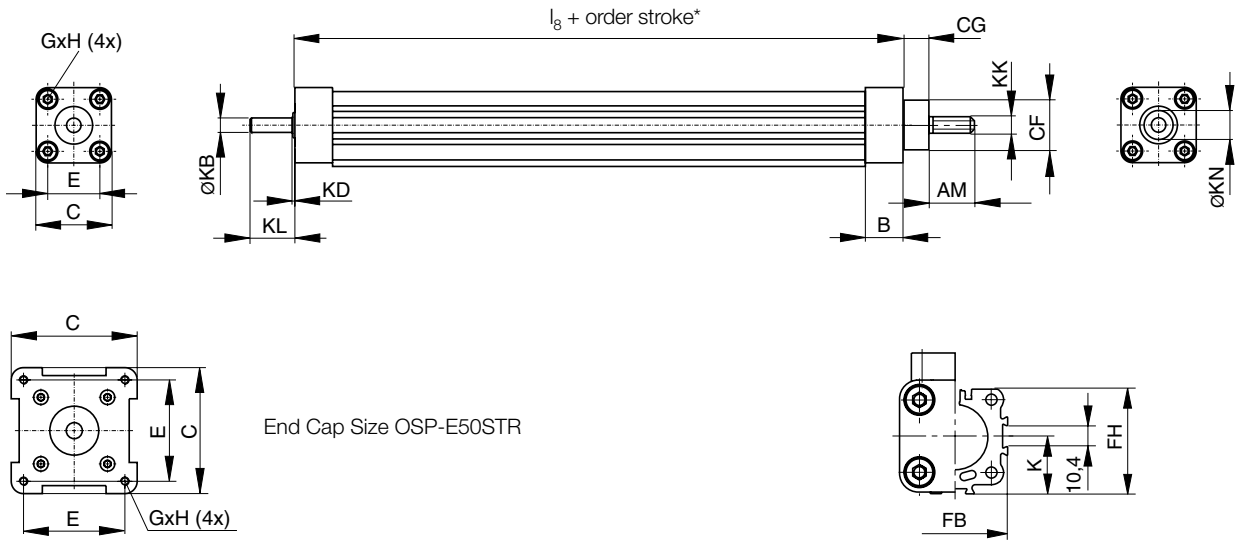
The Actuators are designed for a 10% intermittent usage.

The performance to be expected depends on the maximum required actions force of the application.
An increase of the action force will lead to a reduced performance.

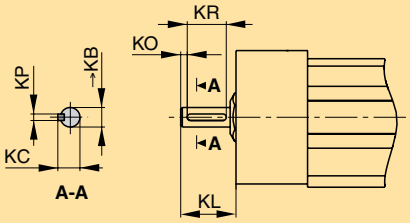


The graph is based upon 10% intermittent usage

OSP-E..STR
Trapezoidal Screw Actuator with Internal Plain Bearing Guide and Piston Rod - Basic Unit



Plain Shaft with Keyway (Option)



Series	⌀KB_{h7}	KC	KL		KO	KP^{P9}	KR
			Opt. 3	Opt. 4			
OSP-E25SBR	6	6.8	17	24	2	2	12
OSP-E32SBR	10	11.2	31	41	5	3	16
OSP-E50SBR	15	17.0	43	58	6	5	28

Option 3: Keyway Option 4: Keyway long version

*** Note:** The mechanical end position must not be used as a mechancial end stop. Allow an additional safety clearance at both ends equivalent to the linear movement of one revolution of the drive shaft, but at least 25 mm. Order stroke = required travel + 2 x safety distance.
The use of an AC motor with frequency converter normally requires a larger safety clearance than that required for servo systems. For further information, please contact your local Parker representative.

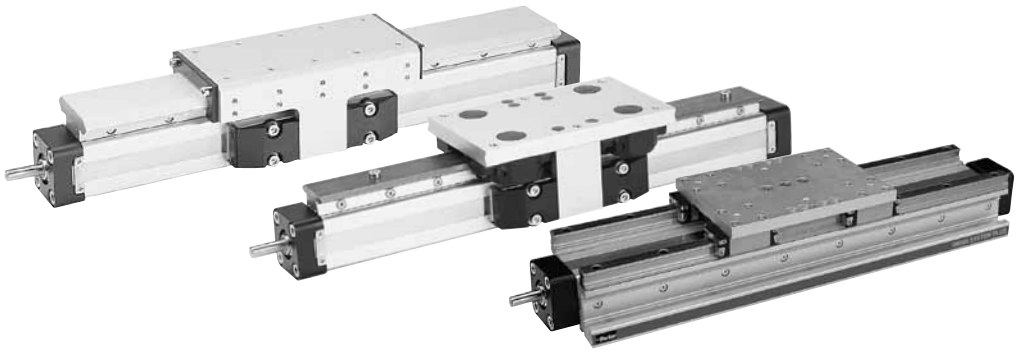
Linear Guides



Content

Adaptive Modular System

The Origa System Plus – OSP – provides a comprehensive range of linear guides for the pneumatic and electric actuators.

Versions:

Electric Acutator Series:

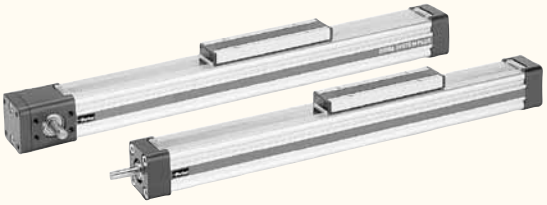
- **OSP-E..B**
- **OSP-E..SB**
- **OSP-E..ST**
- **Sizes** 25, 32, 50

Advantages:

- Takes High Loads and Moments
- High Precision
- Smooth Operation
- Can be Retrofitted
- Can be Installed in any Position

Electric Acutator

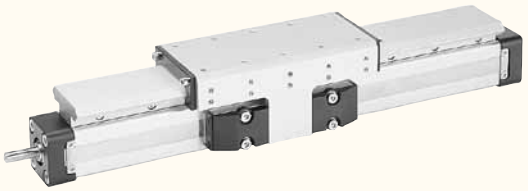
– **Series OSP-E..B** (Belt)
– **Series OSP-E..SB** (Ball Screw)
– **Series OSP-E..ST** (Trapezoidal Screw)



SLIDELINE

The cost-effective plain bearing guide for medium loads.
– for screw actuators only Series OSP-E..SB, OSP-E..ST

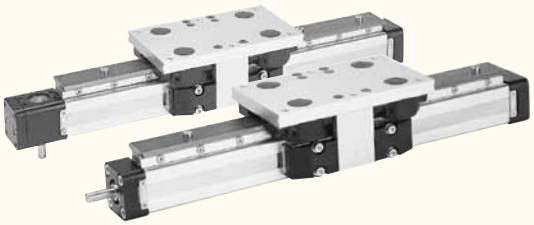
see page 101ff



POWERSLIDE

The roller guide for heavy loads.

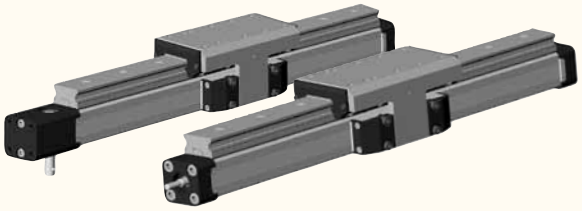
see page103ff



PROLINE

The ball bushing guide for heavy loads and speed.

see page 107ff

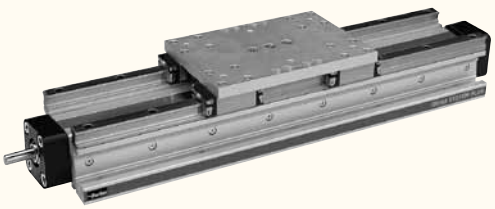


HD-Guide (heavy-duty guide)

The ball bearing guide for the heaviest loads and greatest accuracy.

– for Screw Actuators only Series OSP-E..SB, OSP-E..ST

see page 111ff



Series SL 25 to 50 for for Actuator

• Series OSP-E Screw

Technical Data

The table shows the maximum permissible values for smooth operation, which must not be exceeded even under dynamic conditions.

The load and moment figures apply to speeds v < 0.2 m/s.

Features

- Anodised Aluminium Guide Rail with Prism-Shaped Slideway Arrangement
- Adjustable Plastic Slide Elements
- Composite Sealing System with Plastic and Felt Wiper Elements to Remove Dirt and Lubricate the Slideways.
- Corrosion-resistant Version Available on request.

Versions

– for Electric Actuator Series OSP-E Screw

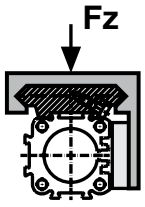
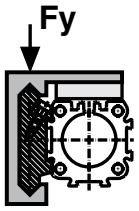
Guide Mounting (see page 149)

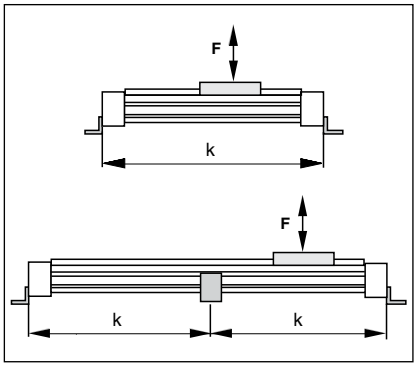
Guide mountings are required from a certain stroke length to prevent excessive deflection and vibration of the actuator.
The diagrams show the maximum permissible unsupported length in relation to loading.

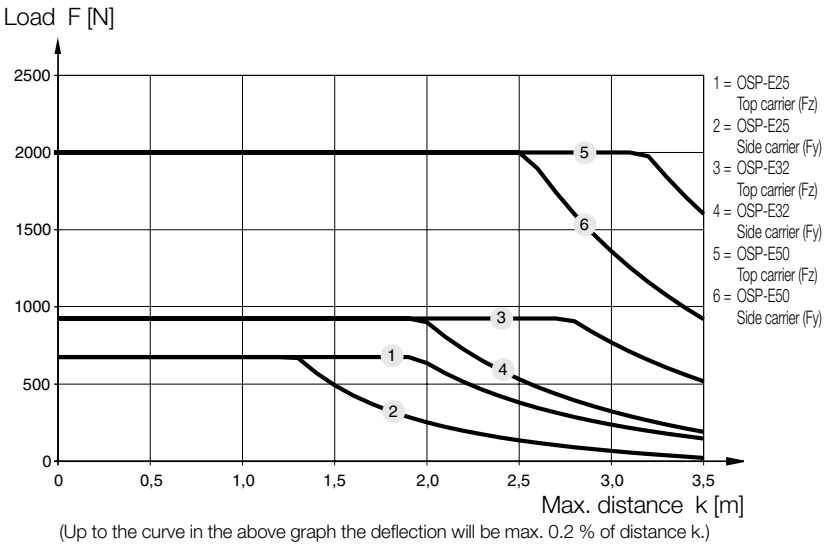
Load case 1
Top carrier





Load case 2
Side carrier





(Up to the curve in the above graph the deflection will be max. 0.2 % of distance k.)

Series PS 25 to 50 for Acutator

- Series OSP-E Belt *
- Series OSP-E Screw

* Series PS for OSP-E Bi-parting version on request

Technical Data

The table shows the maximum permissible values for smooth operation, which must not be exceeded even under dynamic conditions.

For further information and technical data see data sheets for actuators.

Features:

- Anodised Aluminium Guide Carriage with Vee Rollers Having 2 Rows of Ball Bearings
- Hardened Steel Guide Rail
- Several Guide Sizes Can be Used on the Same Drive
- Max. Speed v = 3 m/s
- Tough Roller Cover With Wiper and Grease Nipple
- Any Length of Stroke Up To 3,500 mm (longer strokes on request). The Maximum Stroke Lengths of Actuators OSP-E..B, OSP-E..SB and OSP-E..ST must be observed.

OSP-E Belt: For position of guides see page109

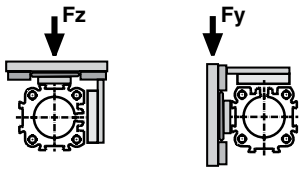
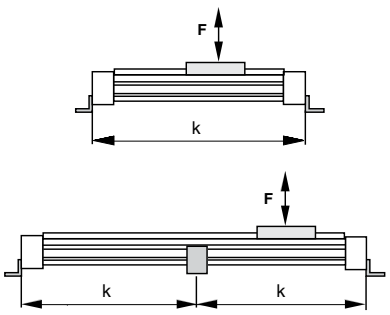
Guide Mounting (see page 149)

Guide mountings are required from a certain stroke length to prevent excessive deflection and vibration of the actuator. The diagrams show the maximum permissible unsupported length in relation to loading.



Load Case 1
Top carrier

Load Case 2
Side Carrier



1. Calculation of Load Factor L_F

Performance

Calculation of performance is achieved in two stages:

- Determination of load factor L_F from the loads to be carried
- Calculation of service life in km

$$L_F = \frac{F_y}{F_{y\,max}} + \frac{F_z}{F_{z\,max}} + \frac{M_x}{M_{x\,max}} + \frac{M_y}{M_{y\,max}} + \frac{M_z}{M_{z\,max}}$$

with combined loads, L_F must not exceed the value 1

2. Calculation of Performance

Lubrication

For maximum system life, lubrication of the rollers must be maintained at all times.

Only high quality lithium-based greases should be used.

Lubrication intervals are dependent on environmental conditions (temperature, running speed, grease quality etc.) therefore the installation should be regularly inspected.

- **For PS 25/25, PS 25/35 and PS 32/35:** **Service life [km]** $= \frac{106}{(L_F + 0{,}02)^3}$
- **For PS 25/44, PS 32/44 and PS 50/60:** **Service life [km]** $= \frac{314}{(L_F + 0{,}015)^3}$
- **For PS 50/76:** **Service life [km]** $= \frac{680}{(L_F + 0{,}015)^3}$

Series PL 25 to 50 for Acutator

- Series OSP-E Belt *
- Series OSP-E Screw

Features:

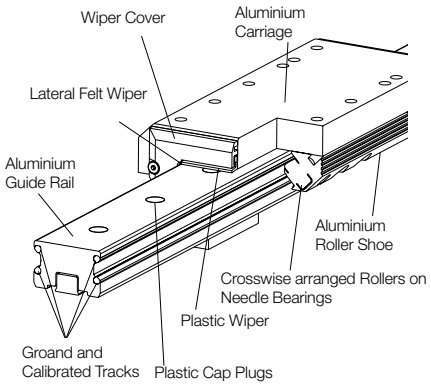
- High Precision
- High Velocities (10 m/s)
- Smooth Operation - Low Noise
- Integrated Wiper System
- Life Time Lubrication
- Compact Dimensions - Compatible to Slideline Plain Bearing Guide
- Stainless Steel Version available up to 3,750 mm

The maximum stroke lengths of acutators OSP-E..B, OSP-E..SB and must be observed.

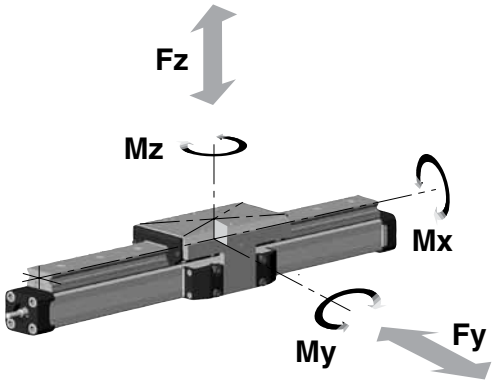
* Series PL for OSP-E Bi-parting version on request.

Versions

– For Electric Acutator:
Series OSP-E Belt
Series OSP-E Screw



Loads, Forces and Moments



Technical Data

The table shows the maximum permissible loads. If multiple moments and forces act upon the cylinder simultaneously, the following equation applies:

$$\frac{F_y}{F_{y\,max}} + \frac{F_z}{F_{z\,max}} + \frac{M_x}{M_{x\,max}} + \frac{M_y}{M_{y\,max}} + \frac{M_z}{M_{z\,max}} \leq 1$$

With a load factor of ≤ 1, the service life is 5000 km.
The sum of the loads must not exceed > 1.

The table shows the maximum permissible values for light, shock-free operation, which must not be exceeded even under dynamic conditions.

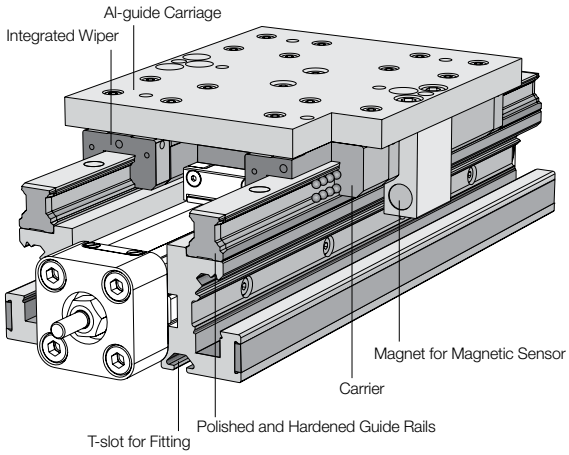
Series HD 25 to 50 for Actuator

- Series OSP-E..SB, ..ST

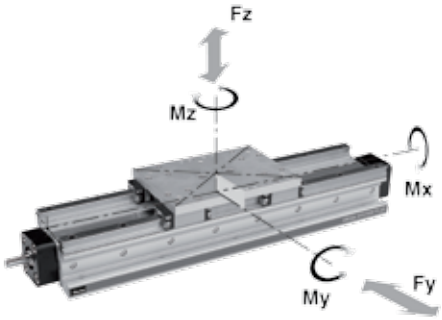
Features:

- Guide System 4-row Ball Bearing Guide
- Polished and Hardened Guide Rails of Steel
- For Highest Loads in all Directions
- Highest Precision
- Integrated Wiper
- Grease Nipple for Relubrication
- Anodized Guide Carriage with the Same Connecting Dimensions as OSP-Guide GUIDELINE
- Maximum Velocity v = 5 m/s

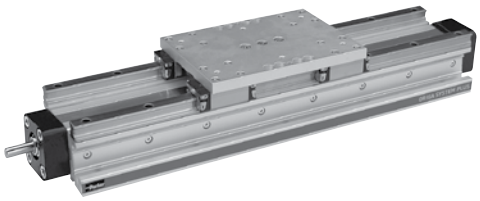
Version - for Electric Actuator: Series OSP-E Screw



Loads, Forces and Moments



OSP-E..SB, ..ST



Technical Data

For the maximum permissible loads please refer to the table below. If several forces and moments loads act upon the guide simultaneously, the following equation will apply:

$$\frac{F_y}{F_{y\,max}} + \frac{F_z}{F_{z\,max}} + \frac{M_x}{M_{x\,max}} + \frac{M_y}{M_{y\,max}} + \frac{M_z}{M_{z\,max}} \leq 1$$

The total of the loads must not exceed > 1 under any circumstances.

The table shows the maximum permissible values for light, shock-free operation which must not be exceeded even under dynamic conditions.

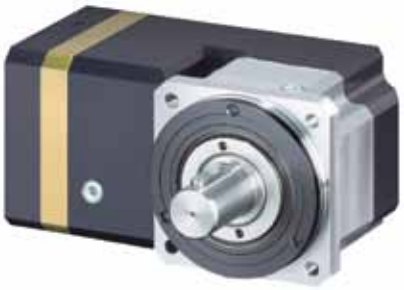
Note:

The dimenison FO is derived from the last two digits of the stroke:

Sample:
stroke 15**25** mm

For a cylinder OSP-E25 the table shows that for x = 25 mm:
FO = 62.5 mm

PS / RS
Planetary / Angular Gears



The requirements between transmissible power and size of gear is defined by the use and required resolution.
A gear can be used to reduce the required torque of the motor and to achieve a good inertia mismatch.

The PS gear boxes incorporate dual angular contact bearings, providing higher radial load capacities while maintaining high input speeds. The lifetime expectance of newly designed needle bearings is significantly high.

Maintenance: The PS series is lifetime lubricatied.

Angular Gears - Series RS60, RS90, RS115

The requirements between transmissible power and size of gear is defined by the use and required resolution. A gear can be used to reduce the required torque of the motor and to achieve a good inertia mismatch.

The RS gear boxes incorporate dual angular contact bearings, providing higher radial load capacities while maintaining high input speeds. The lifetime expectance of newly designed needle bearings is significantly high.
An angular gear is often used if space is limited and a compact motor and a gear mounting is needed.

Maintenance: The RS series is lifetime lubricatied.

EasyDrive Packages

Microstepping Controller

The microstepping controller has outstanding characteristics, for both slow and fast movements. Its step resolution from 400 to 51,200 steps per revolution is freely programmable and allows ideal adjustment to requirements regarding speed and response characteristics.

Technical Data - Microstepping Controller

Characteristics	Symbol	Unit	
Output Voltage Motor	U_{bP}	VDC	48 - 80 (+5% to -15%)
Nominal Output Current	I_{nP}	A	5.6
Peak Output Current	I_{pP}	A	8
Motor Inductance		mH	0.5 to 20
Output Voltage Logic	U_{bL}	VDC	24 (+/- 12.5%)
Nominal Current Logic	I_{nL}	mA	250
Resolution Motor (freely selectable)		Inc./rev	400 to 51,200
Digital Inputs			5
Digital Outputs			3
Com Port			RS232
User Interface			EasyDrive
Certification			CE / UL (E194158)

Servo Controller

The servo controller should be selected for dynamic motion profiles, since it can deliver for the motor a peak current which is 3 times higher than the rated current. Optimising the closed loop parameters allows the system consistency to be adapted to the individual application's requirements and thus generate an excellent motion profile.

The EasyDrive user menue allows you to do commissioning quickly and easily without the need to go through user manuals.

Stepper Motor

The 2-phase hybrid stepper motors were designed to suit most industrial applications that require special rigidity and reliability. The typical characteristic torque curve shows the maximum torque for the stepper motor, that must not be exceeded. For industrial applications motors usually are sized within the secure torque curve.

Technical Data - Stepper Motor

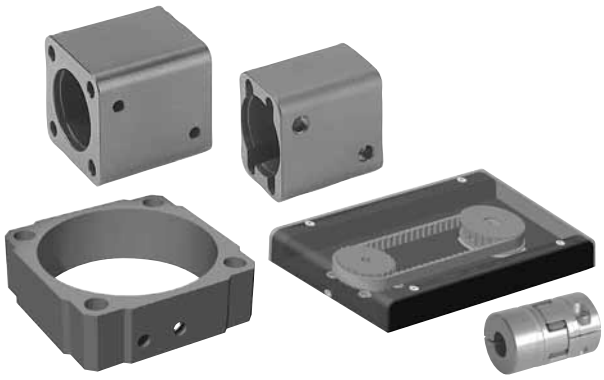
Motor Mountings



Content

- **OSP-E..BHD Belt Actuator with Integrated Guide**

Via the coupling housing the gear or the motor can be fitted directly to the actuator and the drive shafts by means of a motor flange.

The motor flange matches the above mentioned coupling housing and has be reworked to match the respective type of motor.

Motor flanges for the available range of gears, servo and stepper motors are included in the respective data sheet, including technical data and dimensions. Please refer to the respective catalogues.

- **OSP-E..BV Vertical Belt Actuator with Integrated Ball Bearing Guide**

The coupling housing with suitable motor flange allows proper connection between the drive shaft of the actuator and the gear shaft or motor shaft. The gear or motor can either be fitted to the actuator directly or indirectly. If a Parker Origa gear is used, direct clamping of the gear shaft into to the drive shaft with clamping Stroke. As an alternative the gear or motor can be fitted to the actuator via a motor coupling.

[1] **Hint:** when selecting the type of motor mounting please observe the respective drive shaft versions in accordance with the ordering code of the actuator (page 36).

The motor flange for motors with freely selectable mounting dimensions offers flexible possibilities to connect most different type s of motors to the electric actuators OSP-E. The drive shafts of actuator and motor are connected with a motor coupling in the coupling housing and the motor flange is centred.

Hint: Please check the following data for the connection of the motor to the freely selectable motor flange and state when ordering:

1. mounting angle W of the motor
2. bore hole version B as thread M or counterbore S
3. pitch circle diameter A as a function of M or S
4. Diameter of centring spigot D
5. Length of motor shaft G

Article is configurable customized	**18184FIL**

• Series OSP-E..SB, ..ST, ..SBR, ..STR Actuator with Screw

The belt gear with its freely selectable mounting dimensions offers the possibility to fit most different Type s of motors to the actuator parallel to the motor axis. After the flange dimensions of the motor had been checked, the mounting side of the motor will be prepared for the individual demands of the customer.

When ordering please observe the version of the drive shaft of the actuator OSP-E with spindle. This version can either be ordered with plain shaft or plain shaft with keyway (Option). (If the version keyway is selected, the delivery period may be elongated.)

Compensation

Content

- **OSP-E..B Belt Actuator with Internal Plain Bearing Guide**
- **OSP-E..SB, ..ST Screw Actuator with Internal Plain Bearing Guide**

When external guides are used, parallelism deviations can lead to mechanical strain on the piston. This can be avoided by the use of a Compensation. Freedom of movement is provided as follows:

- Tilting in Direction of Movement
- Vertical Compensation
- Tilting Sideways
- Horizontal Compensation.

A stainless steel version is also available.

In dirty environments, or where there are special space problems, inversion of the cylinder is recommended. The inversion bracket transfers the driving force to the opposite side of the cylinder. The size and position of the mounting holes are the same as on the standard cylinder.

Stainless steel version on request.

Please note: Other components of the OSP system such as **profile mountings, magnetic** switches can still be mounted on the free side of the cylinder.

Important Note: May be used in combination with Compensation, ref. dimensions in page 143.

Magnetic Field Sensors

Type P8S-G

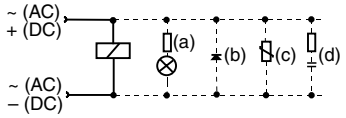
The new generation of t-slot sensors convince with easy mounting avoiding special tools and with a drop-in mounting. Due to new electronic the hysterisis is very small and allows a very accurate switching point.
Magnetic Field Sensors are used for contactless electric sensing of the carrier position, e.g. for end or homing positions of a linear actuator. The field of magnets mounted as standard into the carriage activate the sensor.

Electric Service Life, Protective Measures

Type RS magnetic sensors are sensitive to excessive currents and inductions. With high switching frequencies and inductive loads such as relays, solenoid valves or lifting magnets, service life will be greatly reduced.
With resistive and capacitative loads with high switch-on current, such as light bulbs, a protective resistor should be fitted. This also applies to long cable lengths and voltages over 100 V.

In the switching of inductive loads such as relays, solenoid valves and lifting magnets, voltage peaks (transients) are generated which must be suppressed by protective diodes, RC loops or varistors.

Connection Examples
Load with protective circuits
(a) Protective resistor for light bulb
(b) Freewheel diode on inductivity
(c) Varistor on inductivity
(d) RC element on inductivity



For the type ES, external protective circuits are not normally needed.

Carriage Speed / Reaction Time

Carriage speed and switching distance affect signal duration and should be considered in conjunction with the minimum reaction time of ancillary control equipment.
In accordance to this, the contact travel must be included in the calculation.

$$\text{Min. reaction time} = \frac{\text{Switching distance}}{\text{Piston speed}}$$

Position Measuring System SFI-plus

ORIGA-Sensoflex (incremental displacement measuring system)

Series SFI-plus
- **OSP-E..SB Ball Screw Acutator with Internal Plain Bearing Guide**
- **OSP-E..ST Trapezoidal Screw Acutator with Internal Plain Bearing Guide**

Special Properties

- Contactless, Magnetic Displacement Measuring System
- Freely Selectable Displacement Length up to 32 m
- Resolution 0.1 mm
- Displacement Speed up to 10 m/s
- Suited for Linear and Gyratory Movements
- For Almost all Control and Display Units with Suitable Counter Input

The magnetic displacement measuring system SFI-plus consists of 2 main components:

- **Measuring Scale** self-adhesive, magnetic measuring scale

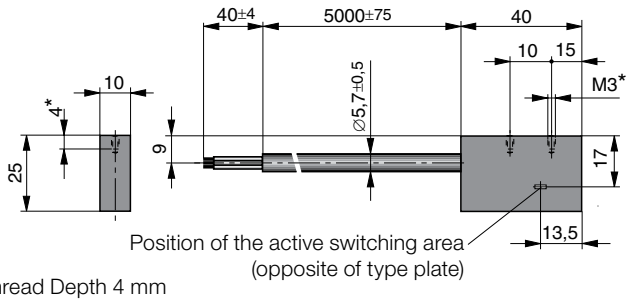
- **Sensing Head** converts the magnetic poles into electric signals which are then processed by counter inputs down stream (e.g. PLC, PC, digital counters)

Series SFI- Plus SensoFlex Incremental

Type	
Output Function	**21210FIL**
Resolution [mm]	0.1 / 1 Flank Evaluation
Pole Length Scale [mm]	5
Max. Speed [m/s]	10
Repeating Accuracy	± 1 Increment
Distance Sensor / Scale [mm]	2
Switching Output	Push-Pull
Electric Characteristics	
Operating Voltage U_b [V DC]	10 - 30
Voltage Drop [V]	≤ 2
Continuous Current per Output [mA]	≤ 40
Power Consumption [1] [mA]	≤ 15
Short-circuit Protection, Reverse Voltage Protection, Protection against Inductive Switch-off Peak	yes
Electrostatic Discharge [kV]	8 kV Contact A, 15 kV without Contact A
Fast Transists Signals, Burst (DC-Connections) [kV]	1, A - 2, B
Mechanical Characteristics	
Housing	Aluminium
Cable Length [m]	5.0 – Fixed, Open End
Cable Cross-section [mm^2]	6 x 0.14 + 2 x 0.22
Type of Cable	PUR, Black
Bending Radius [mm]	41
Ambient Conditions	
Encapsulation Class [2] [IP]	67
Ambient Temperature Range T_a [°C]	-25 to +85
Shock [3] / Vibration [4]	(11 ms) 300 m/s^2 / (55 Hz to 2000 Hz) 300 m/s^2

[1]) U_b = 24V, Switched on , no load
[2]) according to EN60529
[3]) according to EN 60068-2-6
[4]) according to EN 60068-2-27

Dimensions [mm] - Reading Head



* Max. Thread Depth 4 mm

Sensing head

The sensing head supplies two pulsating, 90° out of phase counter signals (phase A/B) with a resolution of 0,4 mm (option 4 mm). External pulse edge control can improve the resolution to 0.1.mm (option 1 mm). The counting direction automatically results from the phase shift of the counter signal.

Signal Curve - Sensing Head OUT

$U_a = U_e$	Phase B	U_{a1}	0°		Phase A	U_{a2}	90°	

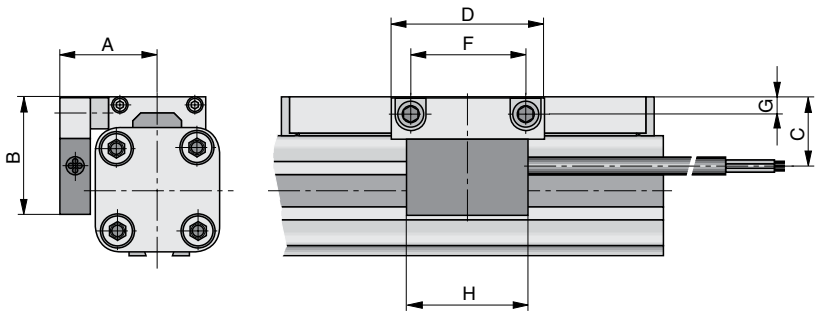
Electric Connection

colour	Designation
bn = brown	+ DC
bl = blue	- DC
bk = black	Phase A
wt = white	Phase B

Dimensions [mm] - in Combination with OSP-E Actuators



SFI-plus in connection with electric actuators of series OSP-E..ST

The SFI-plus can be mounted directly to the electric actuator of series OSP-E..ST by means of a special mounting kit.
The position of the sensing head is generally staggered by 90° to the carrier. For later installation a corresponding carrier kit with threaded holes can be ordered.

SFI-plus in connection with electric actuators of series OSP-E..SB

The displacement measuring system in connection with series OSP-E..SB can only be retrofitted, if the system is reconditioned by the manufacturer.

Dimension [mm]

Series	A	B	C	D	F	G	H
OSP-E25SB, ST	32.0	39.0	23.0	50.0	38.0	5.5	40.0
OSP-E32SB, ST	37.5	46.0	30.0	50.0	38.0	6.5	40.0
OSP-E50SB, ST	49.5	55.0	39.0	50.0	38.0	6.5	40.0

Order Instructions

Description	Order No.
Sensing Head with Measuring Scale – Resolution 0,1 mm (please Indicate Scale Length)	**21240FIL**
Sensing Head – Resolution 0.1 mm (spare part)	**21210FIL**
Measuring Scale per meter for (to be replaced)	**21235FIL**
Mounting kit for OSP-P25	**21213FIL**
Mounting kit for OSP-P32	**21214FIL**
Mounting kit for OSP-P50	**21216FIL**

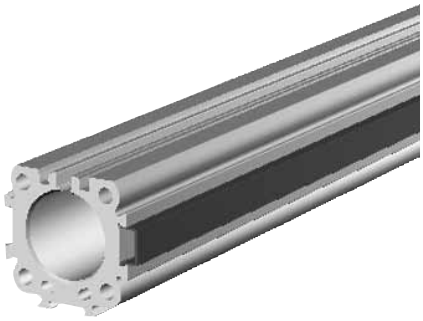
* The overall length of the measuring scale results from the dead length of the actuator and the stroke length. For dead lengths for actuators of series OSP-E see table.

Series	Dead Lengths (mm)
OSP-E25SB, ST	154
OSP-E32SB, ST	196
OSP-E50SB, ST	280

Example:
Actuator OSP-E, Ø25 mm, Stroke 1000 mm

Dead Length	+	Stroke	=	Overall Length of the Measuring Scale
154 mm	+	1,000 mm	=	1,154 mm

Cable Cover



OSP-E

Cable Cover - Ø 20, 25, 32, 50 mm

For clean guidance of magnetic switch cables along the cylinder body.
Contains a maximum of 3 cables with diameter 3 mm.

Material: Plastic
Colour: Red
Temperature Range: –10 to +80°C

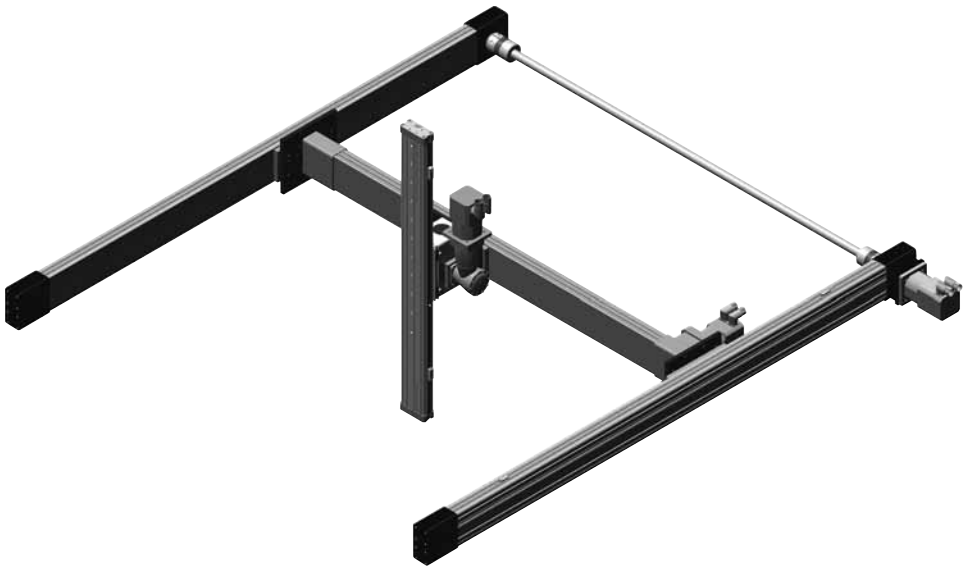
OSP-E Multi-Axis Connections for Electric Actuators



Content

The System Concept

Multi-Axis Connection System – Simplifies Engineering and Installation

A completely new system for easy connection of OSP-E actuators in multi-axis systems.

Multi-Axis-Connections

With this highly adaptable system for connection of actuators in multi-axis arrangements, Parker offers design engineers complete flexibility. A wide range of adapter plates, profile mountings and intermediate drive shafts simplify engineering and installation.

The connection system enables
actuators to be mounted in
carrier to carrier,
carrier to profile,
carrier to end cap mounting,
carrier to end cap.

Developed for the heavy-duty belt drive series OSP-E..BHD, the system provides cross-connection with the same series and also other actuator series in the ORIGA SYSTEM PLUS range.

Multi-Axis-Connection System

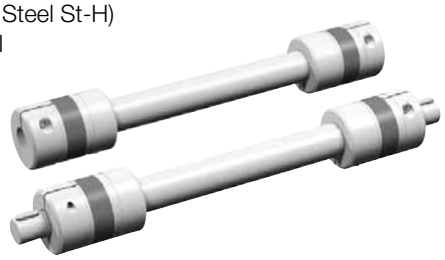
Complete Intermediate Drive Shaft - Size 20, 25, 32, 50

for Actuator Series OSP-E..BHD

Note: For Series OSP-E..BHD with integrated gearbox, please contact your local Parker technical support.

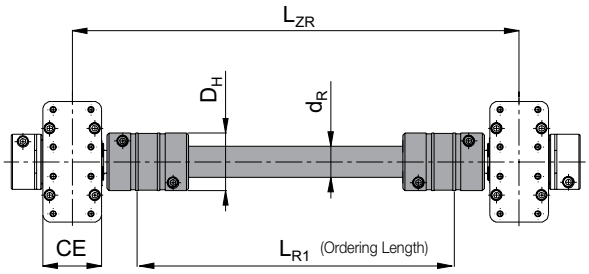
Material:
Aluminium (AL-H) / Steel St-H)
Polyurethane/Hytrel



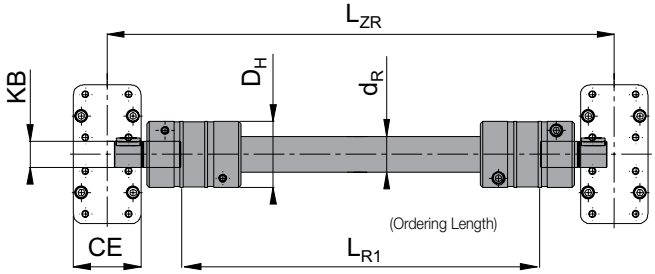
Features:

- Backlash-free shaft connection under pre-stress
- Design up to speed 1500 rpm
- Intermediate Drive Shaft with Double Coupling for Larger Displacements of Parallel Actuators
- Easy to Mount

Intermediate Drive Shaft with Clamp Shaft
Series OSP-E25BHD to E50BHD, Type MAS-..



Intermediate Drive Shaft with Plain Shaft and Keyway
Series OSP-E25BHD to E50BHD, Type MAS-..



Critical Speed v. for Coupling Length
